Coronavirus Disease 2019 (COVID-19)

Updated July 12, 2021

As the delta variant spreads, the State Health Officer urges all Mississippians 12 and older to be vaccinated.

Those 65 and older or with a chronic medical condition should avoid large indoor gatherings, and anyone who is unvaccinated should wear a mask when indoors in public. [Details »](#)

COVID-19 in Mississippi

New Cases and Deaths as of July 12

NEW CASES

219

New COVID-19 positive test results reported to MSDH as of 3 p.m. yesterday.

TOTAL MISSISSIPPI CASES

325,072

- ▶ [Totals by county](#)

NEW DEATHS

10

New COVID-19 related deaths identified by MSDH as of 3 p.m. yesterday.

Four deaths occurred between July 7 and July 11 in the counties below:

- ▶ [County list](#)

Six deaths occurred between August 23, 2020 and July 5, identified from death certificate reports.

- ▶ [County list](#)

TOTAL MISSISSIPPI DEATHS

7,451

▶ [Totals by county](#)

LTC OUTBREAKS

34

Current outbreaks in long-term care (LTC) facilities only. (See [LTC facility outbreak definition](#).)

▶ [LTC cases by county](#)

About our case counts: We currently update our case totals each weekday based on test results reported to MSDH from the previous day (or weekend). Multiple positive tests for the same individual are counted only once. County case numbers and deaths may change as investigation finds new or additional information.

Case Classifications

Mississippi investigates and reports both probable and confirmed cases and deaths according to the [CSTE case definition](#).

	Confirmed	Probable	Total
Cases	198,801	126,271	325,072
Deaths	5,135	2,316	7,451

Confirmed cases and deaths are generally determined by positive PCR tests, which detect the presence of ongoing coronavirus infection.

Probable cases are those who test positive by other testing methods such as antibody or antigen, and have recent symptoms consistent with COVID-19, indicating a recent infection.

Probable deaths are those individuals with a designation of COVID-19 as a cause of death on the death certificate, but where no confirmatory testing was performed.

Hospitalizations and Bed Availability

Weekly Pediatric MIS-C Cases and Deaths

[Multisystem inflammatory syndrome in children \(MIS-C\)](#) is a rare but serious condition associated with COVID-19 that causes inflammation in many body parts, including the heart and other vital organs.

MIS-C* Cases and Deaths by Age Group through July 12, 2021, Mississippi

Weekly High Case and High Incidence Counties

Tracking counties with recent high numbers of COVID-19 cases, adjusted for population, provides insight on where local outbreaks are most serious, and where protective measures should be increased. For more accurate reporting, these weekly charts include sample collection dates only up to seven days in the past to allow for case investigation and delays in lab test reports.

Cases counts in these charts is based on the date of illness onset. If the date of illness is not known, the date the test sample was taken, or the date of test result reporting is used instead. Counts are adjusted as cases are investigated.

Counties are ranked by two-week case counts, and by two-week incidence (cases proportional to population). A separate table ranking all counties is also available. **All tables updated weekly.**
