Current status

In Australia

As at 06:30 hrs on 3 March 2020, we have 33 confirmed cases of coronavirus (COVID-19) in Australia.

- 15 of the initially reported cases in Australia all had a direct or indirect travel history to Wuhan, China
- 10 cases are associated with the Diamond Princess repatriation flight from Japan. All of these people have returned to their home states for medical care
- 7 cases are reported to have had a direct or indirect travel history to Iran
- 1 case reported in a health care worker did not have a history of travel to any high risk countries in recent weeks

Of the total cases reported, 21 of these cases are reported to have recovered. 1 person has sadly died. The remaining cases are in a stable condition.

For questions about testing or the welfare of people with the virus, contact your [state or territory health authority](#).

In the news

- The Prime Minister has announced the [activation of the Australian Health Sector Emergency Response Plan for Novel Coronavirus \(COVID-19\)](#).

- The Australian Health Protection Principal Committee (AHPPC) has issued [a statement on travel restrictions](#)

For more information, read the latest [transcripts and media releases](#) about coronavirus (COVID-19) in our [news section](#).

Across the world

Across the world, there have been about 89,907 confirmed cases of coronavirus (COVID-19) and 3,084 reported deaths. Of confirmed cases reported globally, the case fatality rate is approximately 3.4%. The case fatality rate in countries and regions outside mainland China is 1.8%.

The majority of cases of COVID-19 have been reported from mainland China – 80,174. 9,733 cases have been reported from 74 countries and regions outside mainland China.

New cases – especially from South Korea, Italy and Iran – are rapidly increasing.

Since 2 March, 974 new cases, including 32 new deaths, have been reported outside mainland China. Andorra, Indonesia, Jordan, Latvia, Portugal, Saudi Arabia, Senegal and Tunisia have reported their first confirmed cases of COVID-19.

These [countries/regions](#) currently pose a risk of transmission to travellers arriving in Australia.

Why is there an alert

On 30 January 2020, the [World Health Organization](#) declared the coronavirus outbreak a Public Health Emergency of International Concern.

The Australian Government has issued this health alert as a precaution, based on the latest and best medical advice.

Australian Health Sector Emergency Response Plan for Novel Coronavirus (COVID-19)

The [Australian Health Sector Emergency Response Plan for Novel Coronavirus \(the COVID-19 Plan\)](#) was endorsed by the [Australian Health Protection Principal Committee](#) on 17 February

2020.

The Australian Government will continue to monitor the emerging information and evidence closely. It will work with jurisdictions, through key committees and other relevant experts, to adapt the COVID-19 Plan as new information becomes available.

[Australian Health Sector Emergency Response Plan for Novel Coronavirus \(COVID-19\)](#)

The Australian Health Sector Emergency Response Plan for Novel Coronavirus (the COVID-19 Plan) guides the Australian health sector response.

Who is at risk

In Australia, the people most at risk of getting the virus are those who have:

- recently been in mainland China or Iran
- been in close contact with someone who is a confirmed case of coronavirus

If you have returned from a country or region that is at higher risk for COVID-19, monitor your health for the next 14 days. You can attend work unless you [work in a setting with vulnerable people](#).

If you are at risk

You need to [isolate yourself](#) if you are at risk of getting the virus:

- If you have left, or transited through mainland China in the last 14 days, you must isolate yourself for 14 days from the date of leaving mainland China.
- If you have left, or transited through Iran on or after 1 March you must isolate yourself for 14 days from the date of leaving Iran.
- If you have been in close contact with a proven case of coronavirus, you must isolate yourself for 14 days from the date of last contact with the confirmed case.

You do not need to isolate yourself if you have only travelled in Hong Kong, Macau or Taiwan.

Travellers and visitors

On 29 February 2020, the Australian Government, informed by advice from the [Australian Health Protection Principal Committee \(AHPPC\)](#) and the Australian Border Force, extended existing travel restrictions to include Iran. All travel restrictions will be reviewed again before 6

March 2020. Read the [statement from the AHPPC](#).

The Australian Government considers the following countries to be at higher risk for COVID-19:

- Mainland China
- Iran
- Italy
- South Korea

If you are returning from these countries, you need to monitor your health for the next 14 days.

If you are returning from mainland China or Iran you should self-isolate for 14 days.

If you are returning from Italy or South Korea, and you work as a healthcare worker or as a residential aged care worker, you should not attend your regular work for 14 days.

This advice should be read in conjunction with the [What you need to know](#) and [Isolation guidance](#) information sheets.

The Department of Foreign Affairs and Trade (DFAT) has raised the level of advice for:

- [Italy](#)
- [Iran](#)
- [Japan](#)
- [South Korea](#) (Daegu and Cheongdo)
- [Mainland China](#)
- [Mongolia](#)

Australians travelling overseas are encouraged to regularly review the [Smartraveller website](#) and subscribe for updates.

China and Iran

Do not travel to mainland China or Iran. This is the latest [China travel advice](#) and [Iran travel advice](#) from the Department of Foreign Affairs and Trade.

Foreign nationals (excluding permanent residents) who are in mainland China, will not be allowed to enter Australia until 14 days after they have left or transited through mainland China.

Foreign nationals (excluding permanent residents) who leave Iran on or after 1 March, will not be allowed to enter Australia until 14 days after they have left or transited through Iran.

Australian citizens, permanent residents, and their immediate family (including spouses, dependants and legal guardians) will still be able to enter Australia but will be required to self-isolate for 14 days after the date they left China or Iran.

If you:

- hold a visa for Australia or have applied for a visa, read the [coronavirus fact sheet for visa holders and applicants](#)
- are planning to travel to or transit through Australia, read the current [travel restrictions](#)
- plan to travel overseas, check the [latest travel advice](#)
- are concerned about someone overseas, call the [DFAT consular emergency line](#)

If you are on board an international flight and show signs of an infectious disease:

- the airline must report you to biosecurity officers
- biosecurity officers will assess you before you get off the plane
- you may be isolated or referred to a hospital

Australians in mainland China or Iran

You should follow the latest [China travel advice](#) or [Iran travel advice](#) and leave by commercial flight as soon as you can.

Australians on cruise ships

DFAT is providing consular assistance to Australians hospitalised and quarantined overseas because of COVID-19.

The Diamond Princess cruise ship

The Australian Government has assisted 170 people to depart Japan. They arrived in Darwin on a Qantas flight on 20 February 2020 and are in quarantine at the Howard Springs Accommodation Village (Manigurr-ma Village Howard Springs).

Any passengers from the Diamond Princess who were not on the Qantas charter flight:

- will not be allowed on other flights to Australia before Wednesday 4 March 2020
- need to complete a 14 day quarantine period before travelling to Australia
- will be subject to health screening on entry if they have not completed the 14 day quarantine requirement
- may be subject to a Human Biosecurity Control Order under the [Biosecurity Act 2015](#), that can include conditions restricting movement or requiring isolation.

Australians who are medically cleared from the Japanese health system will be provided a medical clearance form for presentation to officials upon arrival at the Australian border.

The Australian Embassy in Tokyo is providing consular assistance to a number of Australians hospitalised in Japan due to coronavirus.

Australians in quarantine

164 passengers from the Diamond Princess (Australian citizens, dual nationals and family members) began a 14 day quarantine period at the Howard Springs Accommodation Village (Manigurr-ma Village Howard Springs).

10 passengers have tested positive to COVID-19 since their arrival in Darwin. 9 have been transferred to their home state for medical treatment.

The facility has strong isolation procedures in place.

To support the quarantine process [Howard Springs Accommodation Village \(Darwin\)](#) (Manigurr-ma Village Howard Springs) will act as a human health response zone.

International students

Year 11 and 12 students

Year 11 and 12 students who remain in China (outside Hubei Province) due to Australian travel restrictions have been offered a strict pathway to resume their studies. This is in recognition of the importance of the final 2 years of school.

Students who are completing their senior secondary schooling can apply for an exemption to the 1 February 2020 COVID-19 travel restrictions applied to foreign nationals who have been in mainland China (except Hubei Province). The exemptions will be considered on a case by case basis.

Australian Border Force has [information for student visa holders](#)

We are delivering more Australian education services online and offshore for international students. To find out more and for support, go to [coronavirus updates for international students](#) on the Study in Australia website.

What we are doing

Australia is well prepared. We have plans that we are adapting as we learn more about the virus and how it spreads.

Australian Government agencies and state and territory governments are working together to coordinate an evidence-based response. This includes:

- providing information in English and Chinese based on the latest medical advice, including through [Facebook](#), [Twitter](#), Weibo, WeChat and Chinese newspapers
- applying a 14-day isolation period to people at risk of getting coronavirus
- applying [travel restrictions](#) to reduce the number of travellers from mainland China and Iran
- tracing coronavirus cases
- continuing to screen travellers who arrive in Australia
- continuing with border surveillance
- applying enhanced border measures at international air and sea ports, including announcements and signs

A total of over 1.4 million P2 and surgical masks have been made available from the National Medical Stockpile as part of the Government's response to COVID-19. The Government is also investigating further sources of supply for personal protective equipment, both internationally and domestically.

State and territory health authorities are:

- testing anyone who shows symptoms of the virus

- monitoring close contacts of confirmed cases every day
