Coronavirus COVID-19 daily update

[Print](#)  [Share](#) 

This Chief Health Officer update is intended to provide clinicians and the Victorian public with information about the number of confirmed cases of COVID-19 in Victoria as well as relevant public health response activities in Victoria. Chief Health Officer Alerts will continue to be issued when there are changes to the public health advice related to COVID-19.

08/04/2020

What's new?

Developments in the outbreak

- As of 8 April 2020, Victoria has 1212 total confirmed cases, an increase of 21 since yesterday. 45 people are in hospital, including 12 people in intensive care. 12 people have died. 101 cases have an unknown source of infection, an increase of 8 since yesterday. 736 people have recovered.
- Of the total 1212 cases, there have been 980 in metropolitan Melbourne and 225 in regional Victoria. A number of cases remain under investigation.
- The total number of cases in Australia is currently 5929. That is expected to increase significantly in coming weeks unless people stay at home.
- There have been 156 confirmed cases in healthcare workers, across at least 7 hospitals and 1 radiology clinic.
- Healthcare workers and paramedics who test positive to coronavirus (COVID-19) or are close contacts of confirmed cases can now self-isolate or self-quarantine in free hotel rooms under the Hotels for Heroes program.
- Up-to-date [epidemiological data](#)  is available on our website.
- The Victorian Government now has 1000 people working-around-the-clock on contact

tracing.

Updated advice to clinicians

- GPs can email pharmacists copies of Schedule 4 prescriptions for patients who are self-isolating at home. Pharmacists may then be able to arrange home delivery of the medication.
- Deaths due to confirmed or suspected COVID-19 infection must be notified to the department as soon as possible. Call 1300 651 160 (24 hours, seven days).
- Hospital discharge of confirmed COVID-19 cases can be determined on clinical grounds without prior approval by DHHS. Patients are not required to stay in hospital for the duration of their infectious period.
- If testing health care workers, doctors are reminded to clearly mark pathology slips with 'HCW' to ensure the swabs can be easily identified for priority testing.
- Doctors are reminded to ensure they include a mobile contact number on pathology slips for patients who have been tested.
- Physical (social) distancing measures should be consistently applied, if at all possible, including in clinical settings. The rule of 1 person for every 4 square metres must be maintained to ensure a safe physical distance.

Key messages

- Stay home. Protect the health system. Save lives.
- There are only four reasons to leave home:
 - shopping for what you need - food and essential supplies
 - medical, care or compassionate needs
 - exercise in compliance with the public gathering requirements
 - work and study if you can't work or learn remotely
- We're asking Victorians to stop looking for loopholes. The advice is clear, by staying at home you're saving lives.
- New COVID-19 resources have been developed to provide guidance to GPs and health services including [chronic disease management](#), [palliative and end of life care](#), and advice for immunisations services.
- New [mental health and wellbeing advice](#) has been updated with a number of electronic resources available.
- A detailed [FAQ on the stay at home directions](#) has been developed and published on this site.

Current directions arising from the declared state of emergency

A range of restrictions are in place and include, staying at home, restrictions on particular activities,

detention, restrictions on airports and cruise ships, aged care, hospitals and isolation.

These are defined in a list of Directions from the Chief Health Officer that are in effect and can be viewed [viewed on this site](#).

Healthcare system

- Doctors, nurses, midwives and mental health professionals can deliver temporary Medicare Benefits Schedule and Department of Veterans' Affairs items via telehealth, provided those services are bulk billed.

Flu Vaccinations

- All Victorians are encouraged to get their Flu Vaccination, now available from Pharmacies and GPs. The vaccination cannot protect you from COVID-19 but will ensure your immunity isn't compromised further by contracting Influenza.
- From 1 April, Victorian pharmacists can administer approved vaccinations outside of their normal location – through the mobile and outreach services of a hospital, pharmacy or pharmacy depot, increasing access to immunisations for all Victorians.
- It is also easier for younger Victorians to get these immunisations from their local pharmacy. Appropriately trained pharmacists can now administer the flu shot to children 10 years of age and older.
- Pharmacists will also be able to administer the measles-mumps-rubella, meningococcal ACWY and whooping cough-containing vaccines to people 15 years of age and older – protecting young people from deadly diseases that, combined with the threat of coronavirus, could overwhelm the state's hospitals.
