Coronavirus (COVID-19) daily update

[Print](#)  [Share](#) 

This Chief Health Officer update is intended to provide clinicians and the Victorian public with information about the number of confirmed cases of coronavirus (COVID-19) in Victoria as well as relevant public health response activities in Victoria. Chief Health Officer Alerts will continue to be issued when there are changes to the public health advice related to coronavirus (COVID-19).

18/11/2020

What's new?

- As of 18 November 2020, no new cases have been diagnosed since yesterday with the total number of coronavirus (COVID-19) cases in Victoria at 20,345. This is the 19th consecutive day with no new cases.
- Today's 14-day average case number for metropolitan Melbourne and regional Victoria is zero.
- There have been no new deaths from COVID-19 reported since yesterday. To date, 819 people have died from coronavirus (COVID-19) in Victoria (no change since yesterday's report).
- The total number of cases from an unknown source in the last 14 days is zero for metropolitan Melbourne and zero for regional Victoria. 3,762 cases may indicate community transmission (no change since yesterday's report)
- There are three cases currently active in Victoria. 19,523 people have recovered.
- Two people are in hospital. There are no cases in intensive care.
- A total of 3,440,114 test results have been received. This is an increase of 17,354 since yesterday.
- There are no active coronavirus cases remaining among healthcare workers.
- Victoria, as well as the Northern Territory and Tasmania, regard South Australia as a coronavirus hotspot.

- South Australia will be locked down from midnight tonight (Tuesday 18 November 2020) for six days with only a few permitted reasons to leave home.
- The Department of Health and Human Services (DHHS) authorised officers will be meeting every flight from Adelaide into Melbourne airport at Tullamarine.
- Upon arrival, name and contact details will be taken and a request for information regarding recent locations. Temperature and symptom checking will also be undertaken.
- Depending on their risk profile, passengers are being required to quarantine if they attended any high-risk exposure sites or get tested and isolate until a negative result is received if they are from or have been to metropolitan Adelaide. All other South Australian (SA) travellers are advised to get tested if symptoms develop.
- Anyone who has been in SA in the last 14 days should check the exposure sites listed on the [SA Health website](#) and take the appropriate action.
- Current classifications for this outbreak:
 - 1. Red: attended high risk exposure site – quarantine and will be managed as if close contact
 - 2. Orange: all other travellers from metropolitan Adelaide – get tested and isolate until negative result returned
 - 3. Green: all other South Australian travellers – get tested if symptoms develop. If any travellers have any symptoms, no matter how mild, they should get tested and self-isolate until the result is available.
 - Currently the South Australian border is closed to most travellers from Victoria, which is limiting cross-border traffic.
 - No border restrictions have been imposed by Victoria at this stage, but the government is continuing to monitor the situation in South Australia.
- We are encouraging residents of Hume and Wyndham with even the mildest symptoms to [get tested at one of the five testing sites](#) with further pop-up sites to come in the following days.
- During this period, the Department will work with the local councils to better understand the opportunities to provide better access to testing and information, through forums, community leader sessions and letterbox drops.
- The DHHS website has full details in the [interactive daily report](#).
- From 11:59pm Sunday 8 November, restrictions in metropolitan Melbourne eased to match the level of restrictions in regional Victoria. Visit the [Summary of changes to restrictions for metropolitan Melbourne and regional Victoria page](#) and stay up to date via the [DHHS website](#).

Current advice to clinicians

- Clinicians should be asking patients if they have been in South Australia and if so, to check the areas of risk defined by the [South Australian government](#) and recommended actions.
- Notifications to the department of a confirmed diagnosis of coronavirus (COVID-19) can be done online. You can submit an [online form](#) to our public health team, rather than calling us, saving you time and resolving your case load more efficiently.
- The department is continuing to ask commercial passenger vehicle drivers and food delivery

drivers to get tested for coronavirus (COVID-19). If commercial passenger vehicle drivers and food delivery drivers do not have any of the symptoms of COVID-19, they will not have to stay home to wait for their test results. Commercial passenger vehicle drivers and food delivery drivers will need to tell staff at the testing centre/site that they work in the industry.

Testing advice for clinicians in an outbreak setting

- If a symptomatic patient that presents for testing, confirms exposure to a known COVID-19 case within the past 14 days, and the outbreak definition is met, the test sample is to be treated as an 'outbreak sample'.

COVID-19 Testing Criteria

- Practitioners should test any patients who meet the clinical criteria below:

Fever OR chills in the absence of an alternative diagnosis that explains the clinical presentation*

OR

Acute respiratory infection (e.g. cough, sore throat, shortness of breath, runny nose, or loss or change in sense of smell or taste)

Note: testing is also recommended for people with new onset of other clinical symptoms consistent with coronavirus (COVID-19)** AND who are from the following cohorts: close contacts of a confirmed case of coronavirus (COVID-19); those who have returned from overseas in the past 14 days; or those who are healthcare or aged care workers. Testing is recommended for those cohorts with onset of other clinical symptoms**. Asymptomatic testing is not recommended at this stage except for targeted programs

**Clinical discretion applies including consideration of the potential for co-infection (e.g. concurrent infection with SARS-CoV-2 and influenza)*

***headache, myalgia, stuffy nose, nausea, vomiting, diarrhoea*

- If referring your patients for coronavirus (COVID-19) testing, a list of testing locations can be found on the [getting tested for coronavirus page](#).
- If a symptomatic patient that presents for testing, **confirms exposure to a known coronavirus (COVID-19) case** within the past 14 days, and the outbreak definition is met, the test sample is to be treated as an 'outbreak sample'.

Victoria's restriction levels

- The State of Disaster is not to be renewed but the State of Emergency will be extended until 6 December to allow the Chief Health Officer's directions to remain in force.

Key messages for the community

- In summary, Victorians can travel anywhere around the State. There is no longer a 25-km limit.
- [Rules still apply](#), you can still only have two visitors to your home, but they don't need to be

from the same household. Remember these restrictions remain important as many of the recent outbreaks came from home visits.

- A household will be able to visit people in aged care and hospitals, once a day and limited to two hours.
- Testing is a critical help to keep numbers down so it's extremely important that if people have [symptoms](#), however mild, they get tested. Go home straight after your test and isolate while you wait for the results. Go to the [testing map](#) for locations.
- [Public exposure sites are listed on the DHHS website](#). If you have visited any of the locations listed during the dates indicated, you should watch for coronavirus (COVID-19) symptoms. If symptoms occur immediately get tested and stay at home while you wait for results.
- Six COVIDSafe principles apply across Victoria.
 - Wear a face mask when you leave home (remains mandatory)
 - Don't go to work if you feel unwell.
 - Maintain physical distancing of 1.5 metres.
 - Cough and sneeze into a tissue or your elbow.
 - Perform good hand hygiene.
 - Outdoor activities carry less risk than indoor activities.
- The [Coronavirus \(COVID-19\) Home Safety Plan is available](#) for download which tells you what you need to know to help you, your family and friends stay safe and well.
- Many Victorians are feeling fatigued, isolated or lonely. If you are in need of support for your mental health there are [mental health resources](#) you can access on our website.
- If Victorians are not safe at home, they can seek help and support at an [Orange Door](#) or other family violence support service. If you or someone you know is at risk or experiencing family violence, call 000 in an emergency or safe steps 24/7 crisis service on 1800 015 188.
- The [Partners in Wellbeing](#) hotline (1300 375 330) is available for referrals from people who identify as LGBTIQ, multicultural, Aboriginal or Torres Strait Islander people, veterans and people experiencing homelessness.
