

GOVERNMENT OF
BERMUDA

Health Information (incl. COVID-19 facts)

The Epidemiology and Surveillance Unit helps to manage and monitor the status of health in Bermuda by:

- Regularly recording, interpreting, and reporting data that reflect the health of our community;
- Reviewing health problems and outbreaks; this includes chronic diseases, injuries, and social factors that influence health status
- Detecting and monitoring epidemics and public health emergencies.
- Providing health information upon request in a variety of formats.

International alerts:

Coronavirus (COVID-19, formerly 2019-nCoV)

Updated 6th March 2020

The World Health Organization has declared the current coronavirus situation as a Public Health Emergency of International Concern.

The current World Health Organization risk assessment for novel coronavirus (COVID-19) is very high risk globally. It is advised that all countries prepare for the possibility of COVID-19 in their communities. Everyone has a role to play in getting ready and staying healthy by practicing everyday prevention measures like frequent hand washing, staying home when sick and covering coughs and sneezes.

Bermuda is closely monitoring the global developments through the [World Health Organization \(WHO\)](#) and with our regional public health partners – [Public Health England](#), Pan-American Health Organization and Caribbean Public Health Agency.

Surveillance for respiratory illness has been enhanced in collaboration with local public health partners. Persons with respiratory illness including fever and cough should call ahead and inform their health care provider of their travel history prior to attending for medical care.

There are currently **no cases** of COVID-19 in Bermuda and there have been **no deaths** in Bermuda due to COVID-19.

Information for Travellers

Travellers from affected areas are being monitored. Affected areas include countries with reported sustained or ongoing community transmission of COVID-19 and related travel routes. These include: **China, Iran, Italy, South Korea, Hong Kong, Japan, Macau, Malaysia, Singapore, Taiwan, Thailand, Vietnam**

Travelers who have been in affected areas should be prepared to self-quarantine until a risk assessment is

completed by a public health officer. A public health officer will then assess what public health measures should be implemented based on the travelers' risk level. Public health measures may include active monitoring or supervision of self-monitoring by public health authorities, or the application of movement restrictions, including isolation and quarantine, when needed to prevent the possible spread of COVID-19 in Bermuda.

Any traveler that has been to an affected area and develops fever, cough or shortness of breath, should call ahead and inform their health care provider of their travel history prior to attending for medical care.

As the situation is evolving, it is possible that travelers from other jurisdictions will be required to undergo a risk assessment and may be asked to self-quarantine, self-monitor or allow active monitoring by public health officers.

Ebola

The World Health Organization has declared the Ebola outbreak in the Democratic Republic of the Congo a Public Health Emergency of International Concern. The risk of introduction to Bermuda is low. Travelers to the outbreak area should pay attention to their health during travel and for 21 days following travel; if fever or other symptoms develop, the medical care provider is to be informed of the recent travel prior to attending for medical care.

Local Alerts:

Updated 4th March 2020

The Epidemiology and Surveillance Unit has received increased reports of fever and respiratory symptoms including influenza. Residents are encouraged to ensure that all vaccinations are current.

The Epidemiology and Surveillance Unit continues to receive reports of gastroenteritis (diarrhea and vomiting illness) including campylobacter.

Disease Reporting Forms

We collect health information from various contact points in the community to monitor the health of our Island and identify any concerns. Below are forms for reporting:

- [Physician Reporting Forms](#) 
- [Physician Reporting Form \(Example - Communicable Diseases\)](#) 
- [Physician Reporting Form \(Example - Syndromic Surveillance\)](#) 
- [School and other Childcare Facilities Outbreak Form](#)

Strategy for Sustainable Water and Wastewater Servicing in St. George's Parish

The Study

The Government of Bermuda, Ministry of Public Works, has initiated a study to formulate a strategy for sustainable water and wastewater servicing in St. George's Parish. The objectives of the project involve an information review of the current water supply and sewage systems in St. George's Parish, to establish appropriate policies in order to:

- Offer options for management of service delivery;
- Identify infrastructure investment required to deliver a sustainable service for the Plan Period (25 years); and
- Complete a financial analysis of the current and proposed service delivery systems.

The Process

The study will define existing constraints and capacities, consider and evaluate alternatives and identify preferred water and wastewater servicing alternatives. The methodology will follow a process similar to the master planning process of the Municipal Engineers Association of Ontario, Canada.

Public Information and Consultation

The government wishes to ensure that anyone with an interest in this study has an opportunity to be involved and to provide input. Opportunities to provide the public with information will be made available via Public Information Centers (PIC's) and Town Hall meetings as well as on the project website, found here: www.bermudawater.info. The government is urging St. George's businesses and residents to answer the short survey found at the listed site. If you have any suggestions for or comments on the study please send any email to the project website: stgeorgewwwplan@gov.bm.

"The provision of a robust and reliable water and wastewater service to all islanders and visitors, in a way that will allow Bermuda to be recognized as a leader in sustainability."
