# Coronavirus (COVID-19) update

The current World Health Organization risk assessment for novel coronavirus (COVID-19) is very high risk globally. It is advised that all countries prepare for the possibility of COVID-19 in their communities. Everyone has a role to play in getting ready and staying healthy by practicing everyday prevention measures like frequent hand washing, staying home when sick and covering coughs and sneezes. The World Health Organization has declared the current coronavirus situation as a pandemic. A pandemic is the increased and sustained transmission of a disease across many countries.

Surveillance for respiratory illness has been enhanced in collaboration with local public health partners. Persons with respiratory illness including fever and cough should <u>call ahead</u> and inform their health care provider of their travel history prior to attending for medical care.

This is a rapidly changing situation. Please regularly check this page for updates.

You can view our interactive COVID dashboardhere.

### Data as of 4th February 2021

COVID-19 Testing	Total
Total	165601
Results negative	164909
Results positive	692
Transmission Status of Confirmed Cases	
Imported	200
Local Transmission [Known contact/source]	400
Local Transmission [Unknown contact/source]	90
Under Investigation	2
Status of Confirmed Cases	
Recovered	670
Active (non-hospitalized)	6

Active (hospitalized)	4
Deceased	12

Imported: Cases acquired outside of Bermuda.

Local transmission: Cases acquired within Bermuda

**Under investigation:** Type of transmission has not yet been determined. These cases are not imported and are likely the result of local transmission.

**Recovered:** Case has had no fever for at least 72 hours (3 days) without the use of fever-reducing medication, other symptoms have improved, at least 14 days have passed since onset of symptoms or testing date and there is laboratory confirmation of at least one negative result.

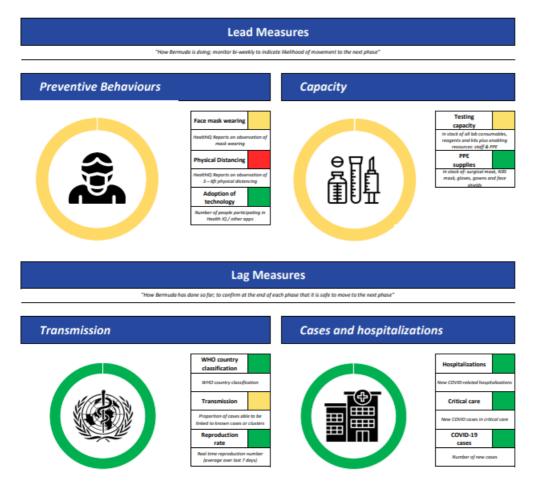

**Deceased:** Case has died without a clear alternative cause of death that cannot be related to COVID disease (e.g. trauma) with no period of complete recovery from COVID-19 between illness and death.

Country status: Clusters of cases

## **COVID-19 Reopening Indicators**

Bermuda is monitoring critical indicators to see how we are doing in managing COVID-19 and assess our readiness to move to the next phase of our reopening plan. These indicators are updated on Tuesdays.

As of 2nd February 2021

#### Definitions

Lead measures:	Lag measures:
1. Face mask wearing: HealthIQ Reports on observation of	6. Classification: WHO Country classification
mask wearing –	
	Green: Sporadic cases
<ul> <li>&gt;95% report public wearing masks</li> </ul>	Amber: Local transmission
<80% report public wearing masks	Red:Community transmission
2. Physical distancing: HealthIQ Reports on observation of 3	7. Transmission: Proportion of cases able to be linked to
– 6ft physical distancing -	known cases or clusters
• >95% report public maintaining distance	• <10% unknown transmission
• <80% report public maintaining distance	• >20% unknown transmission
3. Adoption of Technology: Number of people participating	8. Reproduction rate: Real time reproduction number
in HealthIQ or Apps (public) -	average over last 7 days
• >10,000 unique respondents (All time)	• Rt <1.0
<5,000 unique respondents	• Rt >1.4

Strategy for Sustainable Water and Wastewater Servicing in St. George's Parish

#### The Study

The Government of Bermuda, Ministry of Public Works, has initiated Public Information and Consultation a study to formulate a strategy for sustainable water and wastewater servicing in St. George's Parish. The objectives of the project involve an information review of the current water supply and sewage systems in St. George's Parish, to establish appropriate policies in order to:

- · Offer options for management of service delivery;
- · Identify infrastructure investment required to deliver a sustainable service for the Plan Period ( 25 years); and
- · Complete a financial analysis of the current and proposed service delivery systems.

"The provision of a robust and reliable water and wastewater service to all islanders and visitors, in a way that will allow Bermuda to be recognized as a leader in sustainability."

#### The Process

The study will define existing constraints and capacities, consider and evaluate alternatives and identify preferred water and wastewater servicing alternatives. The methodology will follow a process similar to the master planning process of the Municipal Engineers Association of Ontario, Canada.

The government wishes to ensure that anyone with an interest in this study has an opportunity to be involved and to provide input. Opportunities to provide the public with information will be made available via Public Information Centers (PIC's) and Town Hall meetings as well as on the project website, found here: www.bermudawater.info. The government is urging St. George's businesses and residents to answer the short survey found at the listed site.

If you have any suggestions for or comments on the study please send any email to the project website: stgeorgewwwplan@gov.bm.
