A pneumonia outbreak, now known to be caused by COVID-19, was identified in Wuhan, China on December 31, 2019. The World Health Organization (WHO) has declared the outbreak of the virus a public health emergency.

There are 14 cases in Alberta and 93 cases across Canada. The risk to Albertans is still low.

- [Testing protocols and travel recommendations](#)
- [Updates from Alberta's Chief Medical Officer](#)

Last updated: March 11 at 8:15 am

Current risk level in Alberta

The current risk level is low.

Risk is determined by assessing how likely Albertans are to be exposed to the virus in the province. Currently, Albertans have a very low chance of contracting COVID-19. If this changes in the coming weeks, the risk level in Alberta will be updated accordingly.

Cases and testing

Cases in Alberta and Canada

The cases in Canada have been travel-related and have been isolated to prevent further transmission.

Location	In Alberta	In Canada
Confirmed or presumptive cases	14	93
Deaths	0	1

Testing in Alberta

Alberta is testing for COVID-19. We are acting out of an excess of caution even when the likelihood of exposure is small or improbable. Testing numbers are updated every Monday and Friday, and are current as of March 10.

Test results	Negative	Positive
Number of completed tests	2,004	14

About coronavirus

Coronaviruses are a large family of viruses. Some cause respiratory illness in people, ranging from mild common colds to severe illnesses. Others cause illness in animals. Rarely, animal coronaviruses can infect people then spread from person to person through close contact.

Novel coronaviruses are new strains of the virus that have not been previously identified in humans.

COVID-19 vs. Influenza

In some ways, COVID-19 is similar to influenza (also known as the flu):

- Both COVID-19 and the flu cause respiratory disease in people who get sick.
- Both are spread the same way, via small droplets from the nose and mouth.
- Neither one is spread through the air over long distances and times, unlike a disease like the measles.

However, there are some key differences between COVID-19 and the flu:

- COVID-19 does not appear to transmit as efficiently as influenza. Only those with symptoms seem to be mainly spreading the disease. This means that when people with symptoms are isolated, controlling spread is possible.
- We currently have no specific vaccine or treatment for COVID-19.
- COVID-19 causes severe disease in a higher percentage of cases than seasonal influenza. Estimates of mortality in COVID-19 cases depend on many things, but on average they range from about 1-2 deaths per 100 people infected. By comparison, seasonal influenza is deadly in about 1 in every 1000 who are infected.
- Because COVID-19 can cause such a serious illness, it is critical to keep it from spreading by having people with a cough or fever stay home and away from others.

Find more information on [symptoms of COVID-19](#).

How it spreads

At this time, it appears COVID-19 is transmitted through person-to-person spread by:

- larger droplets, like from a cough or sneeze
- touching contaminated objects or surfaces, then touching your eyes, nose or mouth

Studies suggest that the virus generally only lasts a few hours on a surface, though it may be possible for it to last several days under ideal conditions.

While there is person-to-person spread, current evidence indicates it is not airborne through long distances or times. There is no evidence that it's capable of being transmitted by imported goods.

Symptoms

Symptoms for COVID-19 are similar to those for influenza or other respiratory illnesses. The most common symptoms include:

- fever
- cough
- extreme tiredness

Most people (about 80%) recover from this disease without needing special treatment.

However, it can cause serious illness. Those who are older, and those with other medical problems are more likely to develop serious illness, which can include:

- difficulty breathing
- pneumonia

There is a risk of death in severe cases.

While we are still learning about how COVID-19 affects people, older persons and persons with pre-existing medical conditions (such as high blood pressure, heart disease, lung disease, cancer or diabetes) appear to develop serious illness more often than others.

Treatment

For now, there is no specific vaccine for COVID-19.

The virus is so new and different that it needs its own vaccine. Researchers in many different countries are now working to develop a vaccine.

Supportive care has been used in treatment of patients with COVID-19 and some medications are being tested to see if they can help patients with severe disease.

Consult [Health Link 811](#)  or your health care provider if you're:

- concerned about your health, or
- feeling ill and recently travelled to China or another affected area

Prevent and prepare

Follow these tips to help prevent the spread of respiratory viruses and prepare your household in case you need to self-isolate at home.

How to prevent the spread

It's important to remember that the risk for Albertans is still considered low at this time. Public health measures are in place to quickly identify potential COVID-19 cases and prevent the infection from spreading.

Prevent the spread

Influenza and other common viruses remain the most likely cause of a respiratory infection.

To protect yourself and others:

- use good hygiene practices, such as frequent handwashing
- cover coughs and sneezes
- avoid touching eyes, nose and mouth with unwashed hands
- stay at home and away from others if you are feeling ill
- contact your primary health provider or [Health Link 811](#)  if you have questions or concerns about your health

Wearing medical masks

Masks can be very important in certain situations. When sick, wearing a mask helps prevent us from passing illnesses on to other people. This is why we ask people who have a cough or respiratory symptoms to wear a mask and wash their hands when visiting an emergency department or clinic.

- If you are sick, wearing a mask helps prevent passing the illness on to other people.
- If you are healthy, medical masks are not recommended as they don't provide full protection and can create a false sense of security.
- See [appropriate infection prevention and control precautions for health-care settings](#) .

How to prepare

For Albertans looking to prepare for COVID-19, Alberta public health officials are recommending the following:

- Create a household plan of action. This can include these elements:
 - Talk with the people who need to be included in your plan.

- Meet with household members, other relatives, and friends to discuss what to do if a COVID-19 outbreak occurs in your community and what the needs of each person will be.
- Plan ways to care for those who might be at greater risk for serious complications. This includes practical steps like ensuring you have sufficient medication and determining what supplies are needed, and if they can be delivered.
- Talk with your neighbors about emergency planning.
- Create a list of local organizations that you and your household can contact in the event you need access to information, health care services, support, and resources.
- Create an emergency contact list.
- Practice good personal health habits and plan for home-based actions:
 - Practice everyday preventive actions, like those listed in the prevention section.
 - Choose a room in your home that can be used to separate sick household members from those who are healthy. Identify a separate bathroom for the sick person to use, if possible. Plan to clean these rooms, as needed, when someone is sick.
- Be prepared if your child's school or childcare facility is temporarily dismissed
- Plan for potential changes at your workplace.
 - Learn about your employer's emergency operations plan.
 - Ask about what sick-leave policies and telework options are available if needed.
- Stockpiling of goods is not recommended at this time. While it's always best practice to have three days worth of supplies on-hand, we are not recommending Albertans purchase food or other materials in bulk.

Info for Albertans

If you have COVID-19 symptoms and have travelled outside Canada or were exposed to someone who has COVID-19, stay home and call Health Link 811 for instructions.

Do not go to a health care facility without consulting 811 first. If you need immediate medical attention, call 911 and inform them that you may have COVID-19.

Info for travellers

As a precautionary measure, people returning from outside Canada should follow the monitoring and self-isolation steps below.

Returning travellers should not visit emergency departments or urgent care centres for testing of COVID-

19. Calling Health Link 811 is the best way to get quick assessment and testing, if needed.

Monitor for symptoms

Returning from outside of Canada

Anyone returning from outside of Canada, should follow these steps:

- monitor yourself for symptoms such as cough or fever for 14 days
- self-isolate yourself and call [Health Link 811](#)  for instructions on follow-up testing if you:
 - feel ill after returning and/or experience symptoms
 - were in contact with someone diagnosed with COVID-19
 - were in a health-care facility in an affected country

Self-isolate

Returning from Grand Princess Cruise, Iran or Hubei province, China

If you have returned from the following locations, isolate yourself until 14 days have passed since that trip, even if you are feeling well:

- Grand Princess cruise ship
- Iran
- Hubei province, China

You can isolate yourself by following these [self-isolation guidelines](#) :

- avoid close contact with other people, especially those with chronic conditions, a compromised immune system, or seniors
- do not attend work, school, social events or any other public gatherings
- watch for symptoms like fever, cough or difficulty breathing in yourself or a family member
- call [Health Link 811](#)  for instructions if any symptoms begin

Departing travellers

If you are planning travel outside of Canada, consult the:

- [Public Health Agency of Canada's Travel Health Advisories page](#) 
- [World Health Organization's bulletins](#)  for updated travel advice

Info for seniors

The most important ways to prevent and control respiratory viruses, including COVID-19, in facilities with seniors and other vulnerable groups are:

- Anyone who is sick with fever or cough should not visit loved ones in hospitals, long-term care or other supported living accommodations.
- People in these locations are at the highest risk of complications from both influenza and COVID-19, as well as other respiratory viruses.
- Anyone who is feeling well and not showing symptoms can continue to visit their loved ones in these homes.
- All health-care workers returning from travelling should be assessed by their own Occupational Health Services or AHS Public Health before returning to work (regardless of whether or not they have symptoms).

Info for schools

Alberta public health officials are recommending the following actions as a precaution:

- If a student has visited a Grand Princess Cruise, Iran or China's Hubei province in the last 14 days, it is recommended that they self-isolate until two weeks have passed since that visit. This is recommended even if they are feeling well.
- Parents should call [Health Link 811](#)  for additional precautions and follow-up testing if their children have travelled to anywhere outside of Canada and experienced any of the following:
 - contact with someone who was suspected or confirmed to have the novel coronavirus
 - were in a health-care facility
 - have symptoms, such as cough or fever

If a student does not meet the exposure criteria above, they do not need to stay away from school and they will likely not be tested for COVID-19 as they do not meet the testing criteria. Therefore, requesting that the student provide a physician's note is not appropriate. For health-related questions or concerns, please call [Health Link at 811](#) .

Self-isolation is a precautionary measure and does not mean that the individual is infected with COVID-19. In the event that testing determines an individual is a presumptive or confirmed case, public health officials will immediately connect with any close contacts believed to be at risk. In schools where some students have been identified as close contacts, Alberta Health has not recommended other students be kept home. Health officials will already be ensuring that all appropriate precautions are being taken.

Info for employers and employees

Alberta public health officials are recommending the following actions as a precaution:

- If employees have visited a Grand Princess Cruise, Iran or China's Hubei province in the last 14 days, it is recommended they isolate themselves until two weeks have passed since that visit. This is

It is recommended they isolate themselves until two weeks have passed since that visit. This is recommended even if they are feeling well.

- Employees should self-isolate and call [Health Link 811](#)  for additional precautions and follow-up testing if they have travelled to anywhere outside of Canada and experienced any of the following:
 - contact with someone who was suspected or confirmed to have the novel coronavirus
 - were in a health-care facility
 - have symptoms, such as cough or fever

If an employee does not meet the exposure criteria above, they do not need to stay away from work, and do not need any testing or a physician's note to attend work.

If an employee is asked to self-isolate:

- Employees and employers should work together to explore alternate working arrangements. This could include:
 - Working from home or remotely
 - Doing work that does not require the employee to contact other people in the community or at work.
- If an alternate working arrangement is not possible, employees can use paid sick time if their employer offers this.
- Employees may also be able to use five days of sick time without risk of losing their job with the personal and family responsibility leave, but this time is unpaid.
- Employers should consider their business continuity plans, and think about how the possibility of COVID-19 could impact their workplace. In order to prepare, we recommend plans are made to protect employees, limit spread in workplaces, and ensure continuity of critical services if staff are ill or self-isolating.

Info for municipalities

Alberta and other provinces are providing advice based on the best current evidence and guidance from the Public Health Agency of Canada.

General public health recommendations in communities if COVID-19 spreads in Canada are available on the [Government of Canada website](#) .

If hosting an upcoming event or conference, consider the following:

- Mass gatherings can contribute to the transmission of respiratory pathogens, such as COVID-19.
- Since mass gathering events are generally unique, the advice varies regarding which measures should be undertaken.
- Currently there are no formal restrictions on mass gatherings. Each community or event organizer should undertake a risk assessment to determine what makes sense for them.
- Decisions regarding mass gatherings can be considered on a continuum, including
 - no changes,
 - enhanced communication to attendees,
 - risk mitigation strategies being employed without cancelling the event (such as distancing measures and making hand hygiene supplies available),
 - postponement or cancellation of the event.
- The Public Health Agency of Canada has posted a [risk assessment tool](#) .

If helping local organizations plan for a COVID-19 outbreak, consider the following:

- [Business continuity planning](#) , is vitally important to prepare critical operations for any potential interruption.
- Field officers from the Alberta Emergency Management Agency are available to support municipalities, First Nations and Metis.

Settlements with their emergency management and business continuity planning.

To support the health system, communities should:

- Promote 811 as a source of information and to refer those with health-related concerns.
- Promote Alberta Labour's "[Respiratory Viruses and the Workplace](#)" for workplace guidance.
- Review existing business continuity plans to assess if disruptions from staff absenteeism have been considered, especially for critical operations.
- Stay informed about the situation in Alberta via the Alberta Health Services or Alberta Health COVID-19 websites.

Actions being taken

Alberta's public health officials are carefully monitoring the situation in Canada, China and around the world, and are ready to respond. They are:

- working closely with federal, provincial and territorial partners to share information and assess potential

health risks

- ensuring our health system is ready to respond effectively if needed
- ensuring front-line health professionals have information about the virus so they can:
 - take recommended actions
 - promptly report suspected cases to public health officials
- updating self-isolation and self-monitoring recommendations for returning travellers experiencing symptoms, as required
- tracing all close contacts of presumptive and confirmed cases, testing and isolating those who are symptomatic, and asking even those who are well to self-isolate for 14 days after their last contact with the case

Find out more under the [info for Albertans section](#).

Chief Medical Officer updates

Alberta's Chief Medical Officer of Health, Dr. Deena Hinshaw issued the following statement for Albertans on March 10:

“Today, I am announcing that seven new cases of COVID-19 have been confirmed in our province. This brings the total number of confirmed cases in Alberta to 14. A breakdown of each case has been provided in the news release being sent out today.

"Three of the new cases are from the Edmonton zone, while the other four new cases are from the Calgary zone. They involve a range of ages and travel locations outside of Canada.

"This includes travellers returning from France, the Netherlands, Egypt, Iran, Taiwan, Germany, Malaysia, Trinidad and Tobago, Panama, the Philippines and the United States.

"Many travellers visited more than one country during their trip. One of the individuals was on the same MS Braemar cruise ship in the Caribbean as a case announced yesterday.

"It is important to note that, while this is a list of the countries to which each individual travelled, it is too early to know in which of those countries they contracted the virus.

"All of the new cases are recovering in isolation at home. As with all previous cases, health officials are reaching out to any individuals who may have been in close contact with these cases. I also want to inform you that one of the previously confirmed cases is now receiving treatment in hospital. The individual who is receiving treatment is someone with a pre-existing chronic health condition.

"I know that any rise in case numbers may feel alarming to many people. Many Albertans are wondering what this means for them, and if cases will continue to rise. I want to assure Albertans that all of these cases are travel related. This means that our existing recommendations remain particularly important.

"I want to remind all Albertans that:

- If you are returning from outside of Canada, you should closely monitor your health for 14 days.
- If you start experiencing a fever or cough, even if it is mild, please self-isolate yourself immediately and call Health Link 811.
- Do not go to an emergency department, urgent care centre, or family doctor's office for this assessment and testing.

"The fact that all confirmed cases are travel related also indicates Alberta continues to take the right approach at this time. Our public health measures are doing precisely what they were intended to do: detect new cases and take immediate action.

"This means that the number of confirmed cases will continue to increase in the weeks ahead. But every new travel-related case that is confirmed is another case where we have taken action to isolate the virus and prevent its spread.

"What can Albertans do to prepare and protect themselves?

"They can take seriously the role that all of us now play in protecting our fellow citizens.

"As I mentioned yesterday, many people who get COVID-19 will experience minor symptoms and even recover on their own, but others are at risk of serious complications. In particular, COVID-19 can be extremely serious, and even fatal, for seniors and those with underlying health conditions.

"If you are feeling ill and are not sure if you should stay home or not, think about the people in your life who have a medical condition, or are elderly, and take the action you would want others to take to protect them. We continue to ask anyone who is feeling ill to stay home and not visit hospitals, long-term care facilities or supportive living accommodations.

"Alberta Health and AHS are developing new precautionary materials for schools, long-term care facilities and others to update them on the situation and provide additional advice. This morning, I also participated in a telephone town hall with municipalities and emergency managers to discuss

preparations.

"While the risk of exposure in Alberta remains low, we are taking all necessary steps to prepare the health system in case the risk level changes in the coming weeks. In addition, I want to emphasize that the risk to Albertans who are traveling outside the country is increasing.

"Albertans planning travel in the coming weeks, should carefully monitor the travel recommendations from the Public Health Agency of Canada and consider how the evolving situation may impact their travel plans.

"As well, public health officials continue to put in countless hours to investigate, test and help our province get ready. Through those outstanding efforts, we are preparing for whatever direction COVID-19 takes in the days ahead.

"As I mentioned yesterday, we need to get used to a new normal. This means we all need to be vigilant and take additional precautions to limit the risk for others. The precautionary measures that you take now will help shield yourself, seniors, and people with pre-existing medical conditions from this virus.

"Together, we can protect each other and keep our communities healthy."
