Global

On March 11, 2020, [the World Health Organization \(WHO\) assessed COVID-19 as a pandemic](#).

This assessment by the WHO is not unexpected. Describing the situation as a pandemic does not change the WHO's assessment of the threat posed by COVID-19 and it does not change what the WHO is doing. It also does not change what countries around the world should do. For that reason, it does not change the approach we are taking in Canada.

Canada's public health system is prepared. Since the outset, the Public Health Agency of Canada (along with [public health authorities](#) at all levels of government across the country) have been working together to ensure that our preparedness and response measures are appropriate and adaptable, based on the latest science and the evolving situation.

Aside from Canada, other countries and regions are reporting cases (listed below). An official [global travel advisory](#) is in effect: avoid non-essential travel outside Canada until further notice.

Risk to Canadians

COVID-19 is a serious health threat, and the situation is evolving daily. The risk will vary between and within communities, but given the increasing number of cases in Canada, the risk to Canadians is considered **high**.

This does not mean that all Canadians will get the disease. It means that there is already a significant impact on our health care system. If we do not flatten the epidemic curve now, the increase of COVID-19 cases could impact health care resources available to Canadians.

We continue to reassess the public health risk based on the best available evidence as the situation evolves.

Who is most at risk

While COVID-19 can make anyone sick, some Canadians with specific health circumstances are at an increased risk of more severe outcomes, including individuals:

- aged 65 and over

- with compromised immune systems
- with underlying medical conditions

In addition, social and economic circumstances may also be a factor in identifying [someone who is vulnerable to COVID-19](#). This includes anyone who has:

- economic barriers
- difficulty accessing transportation
- difficulty accessing medical care or health advice
- unstable employment or inflexible working conditions
- insecure, inadequate, or nonexistent housing conditions
- ongoing specialized medical care or needs specific medical supplies
- social or geographic isolation, like in remote and isolated communities
- difficulty reading, speaking, understanding or communicating
- ongoing supervision needs or support for maintaining independence
- difficulty doing preventive activities, like frequent hand washing and covering coughs and sneezes

Think you might have COVID-19?

Take a self-assessment

How Canada is monitoring COVID-19

The health and safety of all Canadians is our top priority.

The Public Health Agency of Canada is working with provinces, territories and international partners, including the World Health Organization, to actively monitor the situation. Global efforts are focused on containment of the outbreak and the prevention of further spread.

Canada's Chief Public Health Officer of Canada is in close contact with provincial and territorial Chief Medical Officers of Health to ensure that any cases of COVID-19 occurring in Canada continue to be rapidly identified and managed in order to protect the health of Canadians.

Canada's National Microbiology Laboratory is performing diagnostic testing for the virus that causes COVID-19. The laboratory is working in close collaboration with provincial and territorial public health laboratories, which are now able to test for COVID-19. A summary of people tested in Canada is available and updated each week day.

National Microbiology Laboratory's summary of people tested in Canada as of April 26, 2020, 5:00 pm EDT

Total number of patients tested in Canada	Total positive	Total negative
707,508	48,065	658,009

This testing summary represents information collected by the laboratory and **not** the [total reported](#)

[cases](#) in Canada. The remainder of tests not reported here are still being resolved.

Should there be any differences with the national case count compared with testing numbers reported by provincial and territorial public health officials, provincial data should be considered the most up-to-date.

For more information, visit [Canada's response page](#).

History

▼ April 2020

- On April 3, Canada announces an investment of \$100 million to **improve access to food** for Canadians facing social, economic, and health impacts of the COVID-19 pandemic.
- On April 3, worldwide COVID-19 cases reach **1 million**.
- On April 2, Canada launches the **Canada COVID-19 app** on iOS and Android to provide Canadians with the latest information on COVID-19 and a way to check their symptoms.
- On April 2, Canada surpasses **10,000 confirmed cases** of COVID-19.
