## Nunavut COVID-19 Case Update

#### February 4, 2021

Total	Total	Total	Deaths	Total	Current	Total vaccine
confirmed	active	recovered		persons	persons	doses
cases	cases	cases		followed	followed	administered
296	14	281	1	6520	323	5568

<sup>\*</sup>Please note: These numbers change frequently. Every effort is made to keep this information up-to-date and complete but it may not reflect all persons followed or tested.

The Government of Nunavut is actively monitoring the COVID-19 situation nationally and globally.

#### **NU COVID-19 Case Statistics**

### February 4, 2021

Community	Confirmed COVID-19 cases (yesterday)	Confirmed COVID-19 cases (today)	Change in case count +/- from previous day	Total recovered	Deaths	Total active cases
Arviat	252	250	2	237	0	14
Whale Cove	23	23	0	23	0	0
Rankin Inlet	19	19	0	19	0	0
Sanikiluaq	2	2	0	2	0	0
Total	296	294	2	281	0	14

## NU COVID-19 Testing Stats

February 4, 2021

Community	Test Positives	Tests Negative
Arviat	252	1830
Whale Cove	23	352
Rankin Inlet	19	399
Sanikiluaq	2	202

<sup>\*\*</sup> Confirmed cases include those meeting the national case definitions. Persons followed includes individuals with specific symptoms and exposures as well as others who are self-monitoring or self-isolated. Not all of these individuals have symptoms or require testing.

<sup>\*\*\*</sup>There may be a delay reporting attribution and statistics from cases acquired in Southern Canada.

<sup>\*\*\*\*</sup>Total vaccine administered is updated as regularly as possible, but might be lower than actual count.

Total	296	2783

## **COVID Hotline**

Need to talk to someone if you have COVID-19 symptoms, or have recently travelled to or from an affected area? Do you have questions about travel to Nunavut or the isolation sites? Please call 975-8601 or 1-888-975-8601 from 10 a.m. to 6 p.m. to speak with someone. For travel related inquiries please call between 8:30 a.m. to 5 p.m. Monday - Friday. Please remember this line is for those who need it – and should not be used for general inquiries.

If you have questions or need help in an emergency, call your local health centre.

#### **COVID-19 Facts**

#### **Symptoms**

Those who are infected with COVID-19 may have little to no symptoms. You may not know you have symptoms of COVID-19 because they are similar to a cold or flu. Symptoms may take up to 14 days to appear after exposure to COVID-19. This is the longest known infectious period for this disease.

Symptoms include:

- fever
- cough
- difficulty breathing
- pneumonia in both lungs requiring support for breathing.

#### If you become ill

If you develop symptoms and have travelled to a region with known cases of COVID-19 occurring in the community or have been in contact with someone who has:

- stay at home and avoid contact with others
- follow up with your health care professional

If you develop fever, cough or difficulty breathing in the next 14 days, call your health care provider or local public health authority and advise them of possible contact with COVID-19.

If you are ill and must visit a health care professional, call ahead or tell them when you arrive that you have a respiratory illness and if you have travelled.

## What are the risks of getting COVID-19?

COVID-19 is a serious health threat, and the situation is evolving daily. The risk will vary between and within communities, but given the increasing number of cases in Canada, the risk to Canadians is considered high.

This does not mean that all Canadians will get the disease. It means that there is already a significant impact on our health care system. If we do not flatten the epidemic curve now, the increase of COVID-19 cases could impact health care resources available to Canadians.

The risk for COVID-19 may be increased for certain settings such as:

- cruise ships
- crowded areas (such as public transit and shopping centres)
- gatherings (spiritual and cultural settings, theatres, sports arenas, festivals and conferences)

There is an increased risk of more severe outcomes for Canadians:

- aged 65 and over
- with compromised immune systems
- with underlying medical conditions

People that fall into these categories should reconsider attending gatherings. This includes large gatherings and even smaller events in crowded or enclosed settings.

If you have symptoms (cough, fever or difficulty breathing), do not attend a mass gathering, event or places where people gather. You could put someone whose health is vulnerable at risk.
