The situation in Finland in brief

- Tested samples in total approximately **219,900** (+ 400*)
 - Reported cases in total: **7,108** (+ 4*)
 - A total of **326** (+ 0*) deaths associated with the disease have been reported.
 - The number of patients in hospital care in Finland is **22** (- 4*).
 - The number of patients in intensive care in Finland is **3** (+ 2*).
- * Change from previous day. Newly reported cases are distributed retrospectively over several days. Also see [Reporting of information](#) below for information on reporting of data.
- In relation to Finland's total population (5,543,233), the prevalence of cases is **128** cases per 100,000 people.
 - During the most recent seven-day monitoring period (6–12 June), **116** new cases were diagnosed. The incidence of new cases in relation to the population was **2** cases per 100,000 inhabitants. During the previous monitoring period (30 May – 5 June), the corresponding figures were 133 new cases, with an incidence of 2 cases per 100,000 inhabitants.
 - Reporting delays can affect the numbers stated for the most recent monitoring period. It is therefore not possible to draw any certain conclusions on the increase or decrease of cases on the basis of the most recent monitoring period.
 - Virus testing currently has a capacity of over **13,000** tests per day.
 - An estimated 6,200 people have recovered, which is around 85% of reported cases. The estimate is based on the follow-up of the observed cases over a period of three weeks (21 days). A person is considered to have recovered, when they do not have any follow-up data related to the progress of the illness after 3 weeks have passed from diagnosis. (Estimate updated on 11 June.)
