Updated on 22 June at 16.40

The epidemic situation in Finland has calmed down. From now on, THL will update the situation update only on weekdays, but will continue to monitor the situation closely.

The corona map will be updated daily

[Corona map](#)

The situation in Finland in brief

- Reported cases in total: **7,144** (+ 25*)
- Tested samples in total approximately **230,500** (+ approx. 6,100*)
- A total of **327** (+ 1*) deaths associated with the disease have been reported.
- The number of patients in hospital care in Finland is **21** (-5*).
- The number of patients in intensive care in Finland is **2** (+ 0*)
*The amount the number has changed since 18 June when the situational review was last updated. 18 cases were reported to the National Infectious Diseases Register between 18 and 21 June. Seven other cases were reported to the register on an earlier date. Other figures also reflect the change from 18 June.
- The newly reported cases are divided over several days. Also see below for information on [Reporting of data](#).
- In relation to Finland's total population (5,543,233), the prevalence of cases is **129** cases per 100,000 people.
- During the most recent seven-day monitoring period (13–19 June), **39** new cases were diagnosed. The incidence of new cases in relation to the population was **1** cases per 100,000 inhabitants. During the previous monitoring period (6–12 June), the corresponding figures were 117 new cases, with an incidence of 2 cases per 100,000 inhabitants.
 - Reporting delays can affect the numbers stated for the most recent monitoring period. It is therefore not possible to draw any certain conclusions on the increase or decrease of cases on the basis of the most recent monitoring period.
- Virus testing currently has a capacity of over **13,000** tests per day.
- An estimated 6,400 people have recovered, which is around 90% of reported cases. The estimate is based on the follow-up of the observed cases over a period of three weeks (21 days). A person is considered to have recovered, when they do not have any follow-up data related to the progress of the illness after 3 weeks have passed from diagnosis. (Estimate updated on 17 June.)
