Updated on 16 July at 17:00.

The corona virus epidemic's status is currently peaceful in Finland. From now on, the THL will only update the situational review page on business days, but will continue to monitor the situation closely at the same time. Hospital districts report deaths associated with the disease and the number of patients in hospital and intensive care three times a week on Mondays, Wednesdays and Fridays. The corona map will continue to be updated on a daily basis.

The situation in Finland in brief

- Reported cases in total: **7,301** (+8*)
- Tested samples in total: approximately **300,400** (+5,500*)
* Change from previous day.
- After yesterday, eight cases have been reported to the register, five of which are new and recent cases reported during the previous two weeks. Also, see below for information on the [Reporting of data](#).
- A total of **328** (+0**) deaths associated with the disease have been reported.
- The number of patients in hospital care in Finland is **6** (-1**)
- The number of people in intensive care in Finland is **1** (+1)**
**The figures describe the change compared to the situation on Wednesday 15 July.
- In relation to the total population of Finland (5,543,233), the overall incidence of cases is **132** cases per 100,000 people.
- During the last seven-day monitoring period (8–14 July), **41** new cases were diagnosed. The incidence of new cases in relation to the population was **0.7** cases per 100,000 inhabitants. During the previous monitoring period (1–7 July), the corresponding figures were 20 new cases, with an incidence of 0.4 cases per 100,000 inhabitants.
 - Reporting delays can affect the numbers stated for the most recent monitoring period. It is therefore not possible to draw any certain conclusions on the increase or decrease of cases on the basis of the most recent monitoring period.
- Virus testing currently has a capacity of over **13,000** tests per day.
- An estimated 6,880 people have recovered, which is around 90% of all reported cases. The estimate is based on the follow-up of the observed cases over a period of three weeks (21 days). A person is considered to have recovered, when they do not have any follow-up data related to the progress of the illness after 3 weeks have passed from diagnosis. The estimate is updated once a week on Wednesdays, the estimate has been updated on 15 July.
