Updated on 20 July at 17:00.

The coronavirus epidemic situation is calm in Finland. Currently, THL will only update the situational review page on business days, but will continue to monitor the situation closely at the same time. Hospital districts report deaths associated with the disease and the number of patients in hospital and intensive care three times a week on Mondays, Wednesdays and Fridays. The corona map will continue to be updated on a daily basis.

The situation in Finland in brief

- Reported cases in total: **7,340** (+ 39*)
 - Tested samples in total: more than **311,200** (+ 10,800*)
 - A total of **328** (+ 0*) deaths associated with the disease have been reported.
 - The number of people in hospital care in Finland is **6** (+ 0*)
 - The number of patients in intensive care in Finland is **1** (+ 0*)
- * The numbers illustrate the change from 17 July when the situational review was last updated. 39 cases were reported to the National Infectious Diseases Register between 17 and 20 July. Of these, 28 are recent cases reported during the previous two weeks. Also see below for information on [Reporting of data](#).
- In relation to the total population of Finland (5,543,233), the overall incidence of cases is **132** cases per 100,000 people.
 - During the most recent seven-day monitoring period (11–17 July), **34** new cases were diagnosed. The incidence of new cases in relation to the population was **0.6** cases per 100,000 inhabitants. During the previous monitoring period (4–10 July), the corresponding figures were 37 new cases, with an incidence of 0.6 cases per 100,000 inhabitants.
 - Reporting delays can affect the numbers stated for the most recent monitoring period. It is therefore not possible to draw any certain conclusions on the increase or decrease of cases on the basis of the most recent monitoring period.
 - Virus testing currently has a capacity of over **13,000** tests per day.
 - An estimated 6,880 people have recovered, which is around 90 % of reported cases. The estimate is based on the follow-up of the observed cases over a period of three weeks (21 days). A person is considered to have recovered, when they do not have any follow-up data related to the progress of the illness after 3 weeks have passed from diagnosis. The estimate is updated once a week on Wednesdays, the estimate has been updated on 15 July.
