Updated on 3 August at 17:10.

The coronavirus epidemic situation is stable in Finland. Currently, THL will only update the situation review page on business days, but will continue to monitor the situation closely at the same time. Hospital districts report deaths associated with the disease and the number of patients in hospital and intensive care three times a week on Mondays, Wednesdays and Fridays. The corona map will continue to be updated on a daily basis.

The situation in Finland in brief

- Reported cases in total: **7,466** (+ 34*)
 - Tested samples in total approximately **367,800** (+ approx. 8,400*)
 - A total of **329** (+ 0*) deaths associated with the disease have been reported.
 - The number of people in hospital care in Finland is **9** (+ 1*)
 - The number of patients in intensive care in Finland is **0** (+ 0*)
- * The numbers in parentheses illustrate the change from 31 July when the situational review was last updated. All of the cases are new cases diagnosed during the previous two weeks. Hospital districts report the numbers for patients in hospital care and deaths associated with the disease. Also see below for information on [Reporting of data](#).
- In relation to Finland's total population (5,543,233), the prevalence of cases is 135 cases per 100,000 people.
 - During the most recent seven-day monitoring period (25–31 July), **59** new cases were diagnosed. The incidence of new cases in relation to the population was **1.1** cases per 100,000 inhabitants. During the previous monitoring period (18–24 July), the corresponding figures were 54 new cases, with an incidence of 1.0 cases per 100,000 inhabitants.
 - Reporting delays can affect the numbers stated for the most recent monitoring period. It is therefore not possible to draw any certain conclusions on the increase or decrease of cases on the basis of the most recent monitoring period.
 - Virus testing currently has a capacity of over **13,000** tests per day.
 - An estimated 6,950 people have recovered, which is over 90% of reported cases. The estimate is based on the follow-up of the observed cases over a period of three weeks (21 days). A person is considered to have recovered, when they do not have any follow-up data related to the progress of the illness after 3 weeks have passed from diagnosis. The estimate is updated once a week on Wednesdays, the estimate has been updated on 29 July.
