Coronavirus infections in schools

Updated on Wed., June 30th at 15:30

The Coronavirus situation in Finland in brief

- Reported cases in total: **95,742** (+1,146*)
 - 123 cases were reported on Thursday, 24.6.
 - 145 cases were reported on Friday, 25.6.
 - 125 cases were reported on Saturday, 26.6.
 - 95 cases were reported on Sunday, 27.6.
 - 84 cases were reported on Monday, 28.6.
 - 219 cases were reported on Tuesday 29.6.
 - 355 cases were reported on Wednesday 30.6.
- Tested samples in total approx. 5,421,300 (+70,100*)
- Cumulative number of reported deaths associated with the disease: 973 (+1*)**
- Number of patients in specialised medical care wards: 28 (+4*)
- Number of patients in primary healthcare wards: 3 (-1*)
- Number of patients in intensive care: 7 (+2*)
- COVID-19 vaccination progress (in Finnish)

*The information was updated on Wednesday, June 30th and shows the change compared to Wednesday, June 23rd. On the corona map, information about confirmed cases and tested specimens is updated every day. Case and sample volumes may be adjusted retrospectively as more information becomes available. The number of patients in hospital care is updated on the corona map on Mondays, Wednesdays and Fridays. The number of patients hospitalized for coronavirus disease is based on the information reported to THL by the hospital districts. The number of deaths associated with COVID-19 is based on information in the National Infectious Diseases Register. The information may be adjusted retrospectively.

**From June 28th THL started to report COVID-19 related deaths only from the National Infectious Diseases Register to harmonise the statistical methods. On Wednesday, July 23rd, THL reported 969 deaths in the situation update on coronavirus. The number of deaths associated with the disease was based on the information reported to THL by the hospital districts. Last week the National Infectious Diseases Register had information on 972 deaths.

Coronavirus variants

It is typical for viruses to mutate. Mutated viruses can have different characteristics from an earlier virus strain. For example, virus strains that have been noticeably modified can be classified as so-called variants of concern (variant of concern, VOC).

THL is actively following how the coronavirus mutates and is evaluating how the variants affect the coronavirus epidemic. Many different variants of coronavirus are currently circulating around the world. The spread of the new viral variants can be prevented in the same way that the contagion of the previous variant of the coronavirus.

Total of **9,280**:: cases caused by the coronavirus variants have been identified in Finland:

- Alfa-variant: 7,522
- Beta-variant: 1,415
- Gamma-variant: 5
- Delta-variant: 338

The numbers of variant strains are based on the data reported to the National Infectious Diseases Register. The information was updated on Wednesday, June 30th.

In addition to the abovementioned VOC viral variants, other viral strains also exist in Finland and other parts of the world, in which the significance of the mutations they contain for the communicability of the virus or the protection offered by vaccines is not yet known. These are called sc variants of interest (VOI). THL is following but is not reporting VOI discoveries regularly. The World Health Organisation (WHO) and European Centre for Disease Prevention and Control (ECDC) are both maintaining listings of coronavirus variants of concern.

Read more on coronavirus variants and ther monitoring:

• Coronavirus variants (in Finnish)

Coronavirus vaccines

THL reports vaccination progress daily on its website:

• COVID-19 vaccination progress (in Finnish).

Data on vaccine doses administered is based on the THL vaccination registry. The vaccination registry information is

updated daily at approximately 1 p.m. Vaccination information may be transferred to the vaccination register with a delay of a few days. The information is updated retrospectively.

Vaccination progress in Europe:

• COVID-19 Vaccine Tracker (ECDC)

Number of received vaccine doses and estimated number of future vaccine doses in Finland

Week	Number of received vaccine doses	Estimated number of future vaccine doses	Total number of vaccine doses
52/2020 - 25/2021	4,796,115		4,796,115
26/2021		410,000	5,206,115
27/2021		452,000	5,458,115
28/2021		252,000	5,710,115
29/2021		252,000	5,962,115

The table presents the total number of coronavirus vaccine doses received, estimated number of future vaccine doses and the total amount of vaccine doses in Finland. The table is updated once a week. Updated on June 30th 2021.

Information by region

Regional incidence has changed as follows during the last **14 days** (14th–27th June) compared to the previous 14-day monitoring period (31st May–13th June):

- The incidence has increased in 16/21 regions compared to the previous 14 days.
- More than 100 new cases have been recorded in the hospital districts of Helsinki and Uusimaa, Pirkanmaa and Southwest Finland.
- The incidence decreased or remained the same in 5/21 hospital districts.
- During the most recent 14-day monitoring period (7.6.– 20.6.), new cases were diagnosed in all areas except North Ostrobothnia.

For more information on the regional epidemic situation by hospital district:

Information about hospital care

Hospital districts report the number of patients that have been hospitalised due to COVID-19 to THL.

People hospitalised due to coronavirus*

Catchment area	ln specialised medical wards	In primary healthcare wards	ln intensive care wards	Hospitalised, total number
Helsinki University Hospital catchment area	19	1	3	23
Kuopio University Hospital catchment area	4	0	0	4
Oulu University Hospital catchment area	1	0	2	3
Tampere University Hospital catchment area	4	0	1	5
Turku University Hospital catchment area + Åland	0	2	1	3
Nationwide total	28	3	7	38

The table shows the number of patients that have been hospitalised due to COVID-19 by catchment area. The figures are based on information reported by the hospital districts. The patient situation is reported by catchment area to ensure patient privacy. Turku University Hospital catchment area also includes data for Åland. The table has been updated on June 30th. 21/21 hospital districts reported up to date information to THL.

*From June 28th THL started to report COVID-19 related deaths only from the National Infectious Diseases Register to harmonise the statistical methods.

The graph shows the number of people in specialised medical care wards (green), primary health care wards (red) and intensive care (blue) in Finland. The figures are based on information reported by the hospital districts. The graph was updated on June 30th. 21/21 hospital districts reported up to date information to THL. As of week 50, comprehensive information on COVID-19 patients in primary health care wards has also been reported to THL.

About intensive care

A national office for the coordination of intensive care headed by the Kuopio University Hospital (KUS) maintains:

- The national situational picture on intensive care (in Finnish)
- Situation update on intensive care on 2/6/2021 (Office coordinating intensive care, pdf 715 kt) (in Finnish)

Coronavirus-related deaths

The corona map has information on deaths related to COVID-19 according to the date of death, and on the age distribution of the deceased.

• The Corona map

The National Infectious Diseases Register* has accumulated information on 973 fatalities:

- The median age of the deceased is 82.
- 54% of the deceased were men and 46% women.
- More detailed health information is available for 52% of the deceased persons. The majority of them (over 95%) had one or more chronic diseases.

*The information in the National Infectious Diseases Register may be adjusted retrospectively.

More information about statistics:

• Statistics on deaths related to COVID-19

Indicators on the effectiveness of Finland's hybrid strategy

The effectiveness of Finland's hybrid strategy in combating the coronavirus epidemic is monitored using epidemiological, medical, and functional indicators.

The monitoring report by the Situational Picture and Modelling Working Group appointed by the Ministry of Social Affairs and Health is published once a week on the THL website: Monitoring of the coronavirus (in Finnish).

The current status of the epidemic in other countries

We update the section on the status of the epidemic in other countries once a week. The information has been updated on June 30th. For daily information on the global situation, please see the links below:

- Number of cases in different countries (WHO)
- Coronavirus disease (COVID-19) outbreak (WHO)
- Numbers of cases in European countries (WHO)
- A summary of cases diagnosed in Europe (ECDC)
- COVID-19 (ECDC)

The incidence of new cases has increased the most in Africa. In Europe and in the Eastern Mediterranean area, the incidence has increased compared to the last week. In Eu region, the incidence is highest currently in Portugal, Spain and Latvia.

During the four-week-monitoring period the incidence of new cases have decreased or remained almost the same in Finland's neighbouring states, except in Russia where the number of incidents has increased compared to the previous 14 days.

The graph shows the incidence of diagnosed COVID-19 cases in the Nordic countries, Baltic states and Russia for the two previous 14-day monitoring periods. The direction and colour

of the arrow indicate a decrease (Green) or an increase (Red) in incidence. If the incidence has remained the same, it is shown in the graph with a green arrowhead. The countries have been arranged according to incidence during the most recent monitoring period. The graph's cases have been listed according to their reporting date based on publicly available information the European Centre for Disease Prevention and Control (ECDC). Graph has been updated on June 30th.
