## **COVID-19 testing and cases**

Bailiwick of Guernsey

Samples tested

44016

Positive results^

615

Negative results

43179

Awaiting results\*

222

No. of deaths\*\*

13

No. of presumptive deaths\*\*\*

3

Number recovered

296

Known active cases

306

in the last day and one person has recovered. Five patients with COVID-19 are currently in hospital.

- \* Awaiting results indicates people who have been swabbed and are awaiting a result as well as people with operations and approved for compassionate travel who are booked several days in advance.
  - \*\* 2 of the 13 deaths occurred in hospital, excludes one death that was not COVID-19 related.
- \*\*\* Presumptive deaths have been reduced by one as retrospective review of one of the presumptive deaths concluded that the death was not COVID-19 related.

^ 252 of the positive cases were from the first wave.

The samples tested number relates to all the sampling and testing activity associated with finding out if a person is positive or negative during 'one testing episode'

For example - a person who is symptomatic, is swabbed and the test outcome is positive. One is added to 'samples tested' and one to 'positive results'. After two weeks the case is re-swabbed to see if they have cleared their infection. They are negative and deemed recovered. Neither the extra swab nor the new negative result are counted as this relates to the original testing episode which has already registered on our statistics.

#### Recovered

We are defining recovery as having no virus detectable on their nose / throat swab on Day 14 or later if a person is still symptomatic on Day 14.

Please see the 're-tests for positive cases' section for an up to date local definition of recovery.

#### **Active Cases**

Active cases are the total number of cases minus those who have recovered or are deceased. We are defining recovery as having no virus detectable on their nose / throat swab on Day 14 or later if a person is still symptomatic on Day 14.

### **Hospital Cases**

Five patients with COVID-19 are currently in hospital.

#### **Deaths**

13 confirmed COVID-19 deaths – COVID-19 positive on laboratory testing / throat swab. Two of which occurred in hospital.

Three presumptive deaths, these have been reduced by one as retrospective review of one of the presumptive deaths concluded that the death was not COVID-19 related.

Details of deaths registered in Guernsey between 1 January 2010 and 18 April 2020 have been examined by the Health Intelligence Unit, Public Health Services, to determine the impact of the COVID-19 pandemic on local death registrations from COVID-19 and other causes. The full report can be found in the downloads section on this page.

Further analysis of COVID-19 cases, modelling and efficacy of contact tracing is available in the downloads box below.
