4. Border Control Measures

In order to prevent 2019-nCoV from entering Japan via foreign aircraft and ships and take necessary measures under "Quarantine law article 34".

This means that government is able to take measures such as inquiry and medical consultation for people entering Japan. Based on the epidemic of this infection in other countries, as a border control measure in Japan, for arriving flights, using questionnaires, calling for self-reports by displaying posters, distributing health cards.

In the meantime, foreigners who have stayed in some areas of some countries within 14 days will be refused entry in some circumstances.

Anyone who has boarded an airplane or ships arriving from China or Republic of Korea at or after 0:00 on March 26 (JST) , or from Indonesia, Singapore, Thailand, Philippines, Brunei Darussalam, Viet Nam, Malaysia, Israel, etc. will stay 14days at a location designated by the quarantine station chief and not to use public transportation in Japan.

Message to the people in Japan

1.Characteristics of new coronavirus infections ascertained a

<The routes of transmission>

The routes of transmission are generally through droplets and contacts.

In addition, under certain circumstances, such as when talking to many people at a short distance in confined spaces,

The risk of occurrence of clusters is particularly high when the “Three Cs” overlap.

1. Closed spaces with insufficient ventilation
2. Crowded conditions with people
3. Conversations in short distance

< Common symptoms and risk of developing severe >

Often, fevers or respiratory symptoms may persist for around one week, and many patients complain of strong fatigue.

Those infected often present only mild symptoms, which will heal in many cases. The severity of the novel coronavirus

the elderly and patients with underlying diseases.

2.Prevention Measures and Guide of Consultation

It is important to wash your hands frequently and to cover your mouth and nose with a tissue, or with the crook of your elbow, when you cough or sneeze, to help prevent the spread of the common cold or the flu. We strongly recommend everyday preventive actions to help keep the virus from spreading.

Important notice for preventing COVID-19 outbreaks.

Avoid the “Three Cs”!

- 1. Closed spaces** with poor ventilation.
- 2. Crowded places** with many people nearby.
- 3. Close-contact settings** such as close-range conversations.

One of the key measures against COVID-19 is to prevent occurrence of clusters.
Keep these “Three Cs” from overlapping in daily life.

The risk of occurrence of clusters is particularly high when the “Three Cs” overlap!

In addition to the “Three Cs,” **items used by multiple people** should be cleaned with disinfectant.

If you have any of the following symptoms, please consult with the consultation center for people with potential exposure to COVID-19.

- You have had cold symptoms or a fever of 37.5°C or over for four days or more.

(including when you need to continue to take an antipyretic)

- You have a strong feeling of weariness (fatigue) or shortness of breath (difficulty breathing).

* Please also consult with the consultation center if you are a senior citizen or have an underlying disease, and you have been in contact with someone who has been infected with the virus.

If the consultation center suspects that you have been infected with the virus, it will introduce you to a medical institution for diagnosis, and you should wear a facemask, and refrain from using public transportation.

※ [Prevention Measures COVID-19](#) (February 25, 2020 version) [464KB]

Prevention Measures against Coronavirus Disease 2019 (COVID-19)

About COVID-19

< Common symptoms and risk of developing severe >

Often, fevers or respiratory symptoms may persist for around one week, and many patients complain of strong fatigue.

Those infected often present only mild symptoms, which will heal in many cases. The severity of the novel coronavirus disease is not as great as infectious diseases with extremely high mortality rates, but it does have the higher risk than seasonal influenza. **The risks of developing severe symptoms are particularly high among the elderly and patients with underlying diseases.**

<The routes of transmission >

The routes of transmission are generally through droplets and contacts. It is not thought to be caused by airborne infections.

In addition, under certain circumstances, such as when talking to many people at a short distance in confined spaces, there is the risk of spreading the infection even without coughing or sneezing.

Precautions in daily life

- First of all, **washing hand** is important. Wash your hands frequently with soap or alcohol when you return home, before or after cooking, before eating, etc.
- When you have symptoms such as coughs and sneezes, please cover your mouth and nose. If you cover coughs and sneezes with your hands and touches objects around you with those hands, there is a chance of spreading virus via those objects, please observe the **"coughing etiquette"**.

- **Seniors and persons with chronic diseases are advised to take extra precaution and avoid visiting packed places** and using public transportation as much as possible.

Do not go to office or school, especially if you have symptoms such as fever.

If you have cold symptoms such as fever, measure and record fever everyday.
