Current situation in Switzerland

23.4.2020, 8 am, cases confirmed in Switzerland:

No. of people tested positive (for coronavirus): 28,496

Deaths: 1,268 people

The figures published here are based on notifications received until early morning. They generally correspond to the date on which the sample was taken by the doctor. The figures contained in the report and in the Excel table may therefore differ from those communicated by the cantons.

Graphics

You can find links to graphics on:

Distribution by canton, age and sex (in [German](#) or [French](#))

Development over time (in [German](#) or [French](#))

Conducted tests (in [German](#) or [French](#))

The graphic showing the development over time is based on the date on which cases were reported. This is generally the date on which the test was conducted. Figures relating to the last two or three days are provisional as there is sometimes a delay in reporting.

Evaluations are limited to data sets for which details regarding age, sex and the canton of residence are complete. Data from the Principality of Liechtenstein are excluded. This accounts for the difference in the figures shown in the graphics and the figures published above.

Highest priority: To protect the public

The Federal Council's highest priority is to protect the public. It is important that we all continue to follow the recommendations and stay at home – even if the weather is fine. That way we can continue to curb the spread of the new coronavirus.

You will find detailed information on the '[Protect yourself and others](#)' site or at www.foph-coronavirus.

Proximity Tracing App

The Swiss Federal Office of Public Health FOPH is supporting the efforts of researchers, scientists and phone manufacturers to produce a decentralised proximity tracing app. There is a common view on the part of the Federal Data Protection and Information Commissioner, the National Centre for Cyber Security, and the National Ethics Committee that the best way of meeting Switzerland's need to safeguard privacy is by pursuing a decentralised approach.

The FOPH is currently working with the EPFL and the ETH Zurich to have an app ready by 11 May. It will be based on the EPFL's DP-3T concept. This decentralised proximity tracing model prevents anyone from being able to reconstruct who met whom when. It will also incorporate the new contact tracing application program interfaces (API) from Google and Apple soon as they are available.

Search for antibodies

How many people in Switzerland have already had the new coronavirus? Does having the infection and recovering from it mean you are then immune? A national study from the Swiss School of Public Health (SSPH+) aims to answer these questions. The network comprising 12 Swiss universities has launched a national study with the support of the Federal Office of Public Health FOPH to discover how many people in Switzerland have already been infected with the new coronavirus. Based on a proposal by Professor Milo Puhon, Head of the Institute of Epidemiology at the University of Zurich, the study will also look at whether having the illness and recovering creates immunity from renewed infection, and if so, how long this immunity lasts. This will involve testing and examining around 25,000 persons from the general population and specific professional groups at regular intervals up to October 2020. A blood test will determine whether the person has had the virus: the presence of antibodies in the blood indicates that they have.

The FOPH is helping to fund the study and is providing expertise. The findings will provide valuable information which will help the cantons and the federal government to determine how to proceed in dealing with the corona pandemic, and to decide on a vaccination programme in Switzerland at a later date.

Scientific advisory body

The Confederation has set up a scientific advisory body, the Swiss National COVID-19 Science Task Force. Its members comprise researchers from across the Swiss scientific community. The Task Force is headed by Matthias Egger, president of the National Research Council of the Swiss National Science Foundation (SNSF). The mandate comes from the Federal Council Coronavirus Crisis Unit KSBC, the FOPH and the State Secretariat for Education, Research and Innovation SERI.

Through its work the Swiss National COVID-19 Science Task Force will help to overcome the coronavirus pandemic. It is providing its expertise in the fields of science and research to the relevant political authorities.

Further information can be found on the [website of the Swiss National COVID-19 Science Task Force](#).

Current situation – International

23.4.2020, 7 am:

Cases of new coronavirus infections have been confirmed in more than 220 countries or regions.

	Confirmed cases, more than	Deaths, more than
Italy	187,000	24,500
France	119,000	21,000
Germany	150,500	5,000
Austria	14,500	500
Globally	2,627,500	183,000

In the majority of cases the illness is mild. [However, people aged over 65 and those with an existing pre-illness could become seriously ill.](#)

Affected areas: why is reference no longer being made to 'affected areas'?

There is now a risk of becoming infected with new coronavirus in almost all parts of the world. As of 9 March we will therefore no longer be referring to 'affected areas'.
