Everyone in Northern Ireland should now stay at home

Back to top

COVID-19 is a new illness that can affect your lungs and airways. It's caused by a type of virus called coronavirus.

Everyone should do what they can to stop coronavirus spreading. The best way to do this is to stay at home:

- only go outside for food, health reasons or work (but only if you cannot work from home);
- if you go out, stay 2 metres (6ft) away from other people at all times;
- avoid non-essential use of public transport, varying your travel times to avoid rush hour, when possible;
- do not meet with friends and family keep in touch using remote technology such as phone, internet, and social media;
- use telephone or online services to contact your GP or other essential services;
- wash your hands well and often, and avoid touching your face.

You can spread the virus even if you don't have symptoms.

We use cookies on our website to support technical features that enhance your user experience.

Everyone should be trying to follow these measures as much as possible. This will mean our usual social activities are on hold for the We also use analytics & advertising services. To opt-out click for more information.

moment. It's very important that we look after our mental and emotional wellbeing. Based on the Take 5 steps to wellbeing, this leaflet offers tips on supporting your mental and emotional wellbeing. We read it More information.

We strongly advise you to follow the above measures and to significantly limit your face-to-face interaction with friends and family if possible, particularly if you:

- are over 70;
- · have an underlying health condition;
- · are pregnant.

This advice is likely to be in place for some weeks.

For more information see COVID-19: guidance on social distancing and for vulnerable people

Preventing the spread of infection

Back to top

Like seasonal flu, the same public health advice applies for COVID-19 (Coronavirus): if you cough or sneeze, use a tissue to cover your mouth and nose, throw it away carefully after use, and wash your hands.

The best way to prevent the spread of infections, including coronavirus, is good personal hygiene. This means washing your hands regularly using soap and water and drying them with paper towels.

COVID-19 is caused by a virus. Antibiotics do not work against viruses, they only work on bacterial infections. Antibiotics should not be used to try to prevent or treat COVID-19 (coronavirus). They will not work and may cause harm.

A British Sign Language version of this information is available here.

An Irish Sign Language Version of this information is available here.

What should I do if I think I have coronavirus?

Back to top

If you have either:

- a high temperature this means you feel hot to touch on your chest or back (you do not need to measure your temperature);
- a new, continuous cough this means coughing a lot for more than an hour, or 3 or more coughing episodes in 24 hours (if you usually have a cough, it may be worse than usual).

Everyone in your house must stay at home.

Do not go to your GP surgery, pharmacy or hospital:

- if you have symptoms of coronavirus, you'll need to stay at home for 7 days;
- if you live with someone who has symptoms, you'll need to stay at home for 14 days from the day the first person in the home started having symptoms;
- however, if you develop symptoms during this 14-day period, you'll need to stay at home for 7 days from the day your symptoms started (regardless of what day you are on in the original 14-day period). This may mean you have to stay at home for a maximum of 21 days;

- if you have symptoms and live with someone who is 70 or over, has a long-term condition, is pregnant or has a weakened immune system, try to find somewhere else they can stay with for the 14-day isolation period;
- it is likely that people living within a household will infect each other or be infected already. Staying at home for 14 days will greatly reduce the overall amount of infection the household could pass on to others in the community;
- testing for coronavirus is not needed if you are well enough to stay at home.

If you have to stay at home together, try to keep away from each other as much as possible. Guidance on this can be found on the Public Health England website:

www.gov.uk/government/publications/covid-19-stay-at-home-guidance/stay-at-home-guidance-for-households-with-possible-coronavirus-covid-19-infection

You can ring NHS 111 for information or advice and they will help you decide if you need to contact your GP.

Calling your GP is only necessary if you have:

- an existing health condition;
- problems with your immune system;
- · very serious symptoms.

Do not attend your GP surgery or emergency department in person before calling ahead and speaking with someone.

If it is a medical emergency and you need to call an ambulance, dial 999 and inform the operator of your symptoms.

For more information see COVID-19: guidance for households with possible coronavirus infection

Advice on testing

Back to top

Testing is currently limited to patients who are being admitted to hospital and some health care workers.

We would advise caution about obtaining testing from non-governmental sources. A positive or negative test will not be recognised by the NHS and will not change the advice given. You will still have to observe recommended isolation periods.

Please be aware that the NHS is not offering testing to people in the community. If a person calls at your front door offering to test you, do not allow them to enter your home. Close and lock the door. Inform the police.

If you work in healthcare: You should contact your Trust line manager and occupational health. Your employer will give specific advice about diagnostic testing and when you can return to work.

Travel advice Back to top

The Public Health Agency (PHA) does not issue travel advice. If you're concerned about the impact of the COVID-19 outbreak on your existing travel plans, check with your airline, tour operator, cruise line or other transport and accommodation providers as applicable. People who plan to travel should check the travel advice here.

What is the situation in Northern Ireland?

Back to top

31 March 2020

The Public Health Agency Health Protection surveillance team has established surveillance systems which are used to monitor COVID-19 activity in Northern Ireland. The systems allow us to monitor trends, inform public health measures to reduce COVID-19 transmission, and to measure the impact of public health measures to reduce COVID-19 transmission in both hospital and community settings.

As of 11:10am on Tuesday March, testing has resulted in 53 new positive cases, bringing the total number of confirmed cases in Northern

Ireland to 586.

To date, 28 people who tested positive have sadly died.

Surveillance reports can be found here

Information sources
