MOH GUIDELINES

TALKING POINTS ON CORONAVIRUS (COVID-19)

Background
An outbreak of Coronavirus COVID-19 was declared by the People's Republic of China on 31st December 2019. This outbreak has now spread globally including Uganda which has confirmed cases of Coronavirus COVID-19. It is important that the people in Uganda remain on high alert and diligently monitor themselves to ensure to avoid contracting Coronavirus COVID-19.

What is Coronavirus (COVID-19)?
This is a highly infectious disease caused by the new Coronavirus COVID-19 and can spread from person to person through sneezing and coughing droplets. This virus has a high and asymptomatic period in the common cold but is more dangerous and it can spread easily and unnoticed in health.

How does Coronavirus spread?
Coronavirus is spread from human to human when an infected person's sneeze or cough droplets come in contact with another person's eyes, nose and/or mouth. It can also spread when a person touches a contaminated surface, e.g. door, chair, desk, hand, phone etc. then touches their eyes, nose and/or mouth.

Who is most at risk?
Everyone is at risk. However, severe symptoms and death appear more frequently among older people and people who underlying health conditions such as lung or heart diseases, kidney failure or weak immune systems are more likely to be at a higher risk of infection.
