Coronavirus (COVID-19): what you need to do

Stay at home

- Only go outside for food, health reasons or work (but only if you cannot work from home)
- If you go out, stay 2 metres (6ft) away from other people at all times
- Wash your hands as soon as you get home

Do not meet others, even friends or family.

You can spread the virus even if you don't have symptoms.

Number of cases and deaths

As of 9am on 13 April, 367,667 tests have concluded, with 14,506 tests carried out on 12 April.

290,720 people have been tested, of whom 88,621 tested positive.

As of 5pm on 12 April, of those hospitalised in the UK who tested positive for coronavirus, 11,329 have died.

	Tests	People tested	Positive	Deaths
Daily	14,506	10,745	4,342	717
Total	367,667	290,720	88,621	11,329

Some individuals are tested more than once for clinical reasons. The figure for the number of tests excludes data from Northern Ireland. Daily totals reflect actual figures reported today.

Serology results for samples tested on 12 April will not be authorised until 14 April due to the Bank Holiday. Combined activity figures for 12 and 13 April will be reported on 14 April. For serology testing, some protocols allow for samples to be tested repeatedly. Samples are anonymised prior to sending to the lab for testing, therefore the identification of individuals tested is not possible in the current reporting process.

Incorporating figures on swab testing for critical key workers

From 10 April, figures for positive tests include positive case results from swab testing for key workers and their households (pillar 2). Data on positive case results from swab testing for key workers and their households between 25 March and 9 April is available below.

Date	Positive
Wed 25 March	0
Thurs 26 March	0
Fri 27 March	5
Sat 28 March	10
Sun 29 March	69
Mon 30 March	46
Tues 31 March	241
Wed 1 April	243
Thurs 2 April	278
Fri 3 April	222
Sat 4 April	265
Sun 5 April	296
Mon 6 April	341
Tues 7 April	254
Wed 8 April	374
Thurs 9 April	331

Breakdown of testing by 3 of the testing strategy 'pillars'

Daily

	Pillar 1	Pillar 2	Pillar 4	Total
People tested	8,256	2,489	-	10,745
Tests	12,017	2,489	0	14,506
Positive	3,543	799	0	4,342

Cumulative

	Pillar 1	Pillar 2	Pillar 4	Total
People tested	273,832	16,888	0	290,720
Tests	348,193	16,888	2,586	367,667
Positive	82,888	5,733	0	88,621

For clinical reasons some people are tested more than once. The “tests” figures exclude data from Northern Ireland. Daily totals reflect actual figures reported today. The reporting cycle for different testing labs have been aligned, the figures indicated for daily activity today for testing includes the catch up of figures not included in yesterday’s daily reported figures.

Pillar 1: swab testing in PHE labs and NHS hospitals for those with a medical need and the most critical workers and their families

Pillar 2: swab testing for key workers and their households

Pillar 4: a national surveillance programme for population blood testing, using a high accuracy antibody test operated by Public Health England to find out what proportion of the population have had the virus.

See the government’s [national testing strategy](#) for more information on the different pillars.

Reporting of figures

Data on UK positive and negative tests and data on deaths is updated on this page daily at 2pm or shortly after. The figures for test results and for deaths are compiled from different sources. This is why the figures for deaths are reported from an earlier point in time than the figures for test results.

Notes on deaths figures

The figures on deaths relate in almost all cases to patients who have died in hospital and who have tested positive for COVID-19. Slight differences in reporting in devolved administrations may mean that they include a small number of deaths outside hospital. The figures are compiled from validated data provided by NHS England and Improvement, Health Protection Scotland, Public Health Wales and the Public Health Agency (Northern Ireland).

These figures do not include deaths outside hospital, such as those in care homes, except as indicated above. This approach allows us to compile deaths data on a daily basis using up-to-date figures. The data includes confirmed cases reported as at 5pm the previous day. The amount of time between occurrence of death and reporting in these figures may vary slightly and in some cases could be a few days, so figures at 5pm may not include all deaths for that day.

In addition to these figures, the Office for National Statistics (ONS) publishes weekly counts of deaths in which COVID-19 was mentioned on the death certificate. This publication is issued every Tuesday, starting on 31 March. It includes cases outside hospital and also some cases where COVID-19 is suspected but no test has taken place. ONS data will initially cover England and Wales only and will report on deaths registered up to 11 days before publication, so up to 20 March for their first release.

Material published by Public Health England

Public Health England update a [daily dashboard](#) later the same day, to show trends in UK data on positive tests and deaths and to provide confirmed cases in each local authority and NHS region in England.

Risk level

The risk to the UK has been raised to high.
