## Number of coronavirus (COVID-19) cases and risk in the UK

The latest number of coronavirus (COVID-19) cases and risk level in the UK.

Published 24 January 2020

Last updated 5 May 2020 — [see all updates](#)

### Number of cases and deaths

As of 9am on 5 May, there have been 1,383,842 tests, with 84,806 tests on 4 May.

1,015,138 people have been tested, of whom 194,990 tested positive.

As of 5pm on 4 May, of those tested positive for coronavirus in the UK, 29,427 have died. This new figure includes deaths in all settings, not just in hospitals. The equivalent figure under the old measure would have been 24,735.

Tests

People tested

Positive

Deaths in hospitals

Deaths in all settings

	Tests	People tested	Positive	Deaths in hospitals	Deaths in all settings
Daily	84,806	69,839	4,406	403	693
Total	1,383,842	1,015,138	194,990	24,735	29,427

## Breakdown of testing by 3 of the testing strategy 'pillars'

### Daily

	Pillar 1	Pillar 2	Pillar 4	Total
People tested	24,941	44,898	-	69,839
Tests	26,866	51,181	6,759	84,806
Positive	2,203	2,203	-	4,406

### Cumulative

	Pillar 1	Pillar 2	Pillar 4	Total
People tested	655,790	359,348	-	1,015,138
Tests	842,903	513,153	27,786	1,383,842
Positive	155,567	39,423	-	194,990

### Pillar 2 breakdown of test types

	In-person (tests processed)	Delivery (tests sent out)	Total tests
Daily	41,127	10,054	51,181
Cumulative	326,207	186,946	513,153

- Pillar 1: swab testing in PHE labs and NHS hospitals for those with a clinical need, and health and care workers
- Pillar 2: swab testing for health, social care and other essential workers and their households
- Pillar 4: serology and swab testing: a national surveillance programme supported by PHE, ONS and Biobank to learn more about the prevalence and spread of the virus

See the government's [national testing strategy](#) for more information on the different pillars.

[See a time series of daily deaths: 5 May 2020](#) (CSV, 2.53KB)

### 5 May notes

The daily total for tests is 7,445 lower than the difference between today and yesterday's cumulative totals. This is due to:

- A historical revision of Pillar 1 tests in England, accounting for 1,897 of the difference;
- From 4 May, swab tests from the ONS COVID-19 Infection Survey are counted under Pillar 4 and not Pillar 2. Tests already processed under Pillar 2 remain in that total and are not included in Pillar 4 totals. Swabs that were previously sent out but have not yet been processed are now recorded in the Pillar 4 cumulative numbers and not in Pillar 2. This accounts for 5,073 of the difference;
- Blood tests from the ONS Covid-19 Infection Survey are now included under Pillar 4. This includes 475 tests from previous days that are included in the cumulative total but are not in the daily figure.

Today's cumulative and daily tests figures also include 5,000 tests that were despatched under Pillar 4 for research

purposes but were not included in the daily figures at the time. These tests were despatched to a research facility on Thursday 30 April and are now being distributed to individuals as part of the overall study.

Tests under pillar 4 are conducted for research purposes and not for the purposes of providing results to individuals (although some individuals do receive results). Research tests are undertaken for a range of purposes from monitoring prevalence rates to understanding individual behaviours and responses to testing. These numbers include both tests that are conducted through the lab and tests that are sent out for home delivery or to independent research facilities.

## General notes

Data on UK positive and negative tests and data on deaths is updated on this page daily at 2pm or shortly after. The figures for test results and for deaths are compiled from different sources. This is why the figures for deaths are reported from an earlier point in time than the figures for test results.

For clinical reasons some people are tested more than once. Therefore the number of tests completed may be higher than the number of people tested. For serology testing (Pillar 4), some protocols allow for samples to be tested repeatedly. Samples are anonymised prior to sending to the lab for testing, therefore the identification of individuals tested is not possible in the current reporting process, and so the number of people tested is not reported.

Daily totals reflect actual counts reported for the previous day. Each day there may be corrections to previous reported figures. This means that previously published daily counts will not necessarily sum to the latest cumulative figure. It also means that today's cumulative count may not match the previous day's cumulative count plus today's daily count.

The number of tests includes:

- tests processed through our labs
- tests sent to individuals at home or to satellite testing locations

From 29 April, the daily count of deaths covers all settings, not just those in hospital. The equivalent count under the previous measure is provided under 'deaths in hospital'. This does include some deaths outside hospital in Northern Ireland, Scotland and Wales.

## Notes on deaths figures

From 29 April, figures for deaths include all cases where there is a positive confirmed test for coronavirus. The figures include deaths with lab-confirmed COVID-19 in all settings, not just those in hospital, and this provides us with a single figure on an equivalent basis for the whole of the UK.

These UK figures are compiled from validated data provided by each of the four nations of the UK. Figures from Health Protection Scotland, Public Health Wales and the Public Health Agency (Northern Ireland) have always included tested cases outside hospital. Figures for England from 29 April onwards are provided by Public Health England and draw together several different data sources, including data from NHS England and Improvement, to produce this broader measure.

This approach allows us to compile deaths data on a daily basis using up-to-date figures across all settings. The data includes deaths with lab-confirmed COVID-19 reported as at 5pm the previous day. The amount of time between occurrence of death and reporting in these figures may vary slightly and in some cases could be a few days, so figures at 5pm may not include all deaths for that day. The PHE method draws on data from 3 data sources and individual records of deaths are included in the figures as soon as they are available in any of these 3 sources.

In rare instances, the daily count under the new measure may be lower than the old measure because some hospital deaths in the hospital-only data will include individuals who have already been included in the composite count. Individual deaths have already been reported in the PHE series on previous days.

In addition to these figures, the Office for National Statistics (ONS) publishes weekly counts of deaths in which COVID-19 was mentioned on the death certificate. This publication is issued every Tuesday, starting on 31 March 2020. The ONS series includes cases in all settings, and also includes some cases where COVID-19 is suspected but no test has taken place. ONS detailed data covers England and Wales only, but from 28 April their publication includes a headline summary of registered deaths in the whole of the UK. Their report each Tuesday covers deaths registered up to 11 days before publication.

[Joint DHSC and ONS transparency statement about COVID deaths figures](#)

PHE updates a [daily dashboard](#) to show trends in UK data on positive tests and deaths and to provide confirmed cases in each local authority and NHS region in England.

## Risk level

The risk to the UK has been raised to high.
