K-12 COVID-19 Dashboard

*Based on a 7-day rolling average. Timing of reporting overall lab results versus positives, repeat testing of individuals, duplicate entries and lack of reporting by some labs, make the data imprecise and more appropriate or useful for trending.

<u>Learn more about how KDPH determines the positivity rate.</u>

Note: Data includes cases of COVID-19 reported to KDPH.

KY COVID-19 Case Classification
COVID-19 Daily Reports

The 7-Day incidence is calculated by taking the total number of unique cases in each county over the past 7 days, divided by 7 to get a daily average, divided by the U.S. census bureau county population, and multiplied by 100,000 to get the incidence per 100,000 people. The cases counted each day are based on the date an investigation was opened in NEDSS (i.e., National Electronic Disease Surveillance System). Duplicate cases are removed before the calculation, so each positive case is only included once. NOTE: State and local health department data will vary for a variety of reasons including data entry timing, communication processes, and 7-day averaging.

Travel Advisory

Learn More

On July 20, 2020 the Kentucky Department for Public Health issued a travel advisory with the recommendation of a **14-day self-quarantine** for travelers who went to any of the states reporting positive testing rate equal to or greater than 15 percent-of COVID-19 testing.

It is recommended to use extra precaution traveling to states reporting positive testing rate equal to or greater than 10 percent-of COVID-19 testing.

| South Dakota 35.53% | |
|---------------------|---------|
| Wisconsin | 22.87% |
| Idaho | |
| lowa | |
| Nevada | |
| Wyoming | |
| Kansas | |
| Indiana | 16.48% |
| Utah | 15.21% |
| Nebraska | 15.07% |
| Florida | 12.34%* |

^{*}Due to the removal of public health restrictions, there is a higher risk of contracting COVID-19 in Florida, therefore a 14- day self-quarantine is recommended after travel to Florida.

Data provided by Johns Hopkins.
