Population values from the 2019 US Census Bureau Estimates   *Total number of cases used in the calculations: 200,631 Cases*   *Data Source: Kentucky Department for Public Health*

Red counties as of Thursday, December 3, 2020
This information will serve as guidance for red county decision making and community planning for the week of Monday, Dec. 7 through Sunday, Dec. 13, 2020.

View Data

The 7-Day incidence is calculated by taking the total number of unique cases in each county over the past 7 days, divided by 7 to get a daily average, divided by the U.S. census bureau county population, and multiplied by 100,000 to get the incidence per 100,000 people. The cases counted each day are based on the date an investigation was opened in NEDSS (i.e., National Electronic Disease Surveillance System). Duplicate cases are removed before the calculation, so each positive case is only included once. NOTE: State and local health department data will vary for a variety of reasons including data entry timing, communication processes, and 7-day averaging.

Desktop Dashboard

Mobile Dashboard

In the event of a discrepancy between case confirmations, please note kycovid19.ky.gov is reporting confirmed cases by the Kentucky Department of Public Health (KDPH). We are working diligently to confirm cases as they are reported to KDPH.

COVID-19 Daily Case Incidence Rate Maps

Daily Reports

Total Positive

200,632

Probable: 34,939- Confirmed: 165,693

Deaths

2,072

Probable: 102- Confirmed: 1,970

Total Tested will be updated on Monday, Dec. 7, 2020

Positivity Rate* will be updated on Monday, Dec. 7, 2020

Recovered will be updated on Monday, Dec. 7, 2020

*Based on a 7-day rolling average; Switched on 10/19/2020 to electronic laboratory reports as the sole source of data for the positivity rate. Learn more about how KDPH determines the [Statewide Positivity Rate](#).

Note: Data includes cases of COVID-19 reported to KDPH.
