## Kentucky Coronavirus Monitoring

Current as of January 9, 2021

# COVID-19 Current Incidence Rate in Kentucky

Date of Report: 1/9/2021 ( 4:57 PM)

## Average Daily Cases per 100K population

(based on previous seven days)

- On Track (< 1 per 100K)
- Community Spread (> 1 - 10 per 100K)
- Accelerated (> 10 - 25 per 100K)
- Critical (25+ per 100K)

Overall Current Incidence Rate  
80.35

Population values from the 2019 US Census Bureau Estimates

Total number of cases used in the calculations: 300,397 Cases

Data Source: Kentucky Department for Public Health

## Red County Recommendations

If your county in the red, please follow the red county recommendations to help limit the spread of COVID-19 in your community.

Red County Recommendations

The 7-Day incidence is calculated by taking the total number of unique cases in each county over the past 7 days, divided by 7 to get a daily average, divided by the U.S. census bureau county population, and multiplied by 100,000 to get the incidence per 100,000 people. The cases counted each day are based on the date an investigation was opened in NEDSS (i.e., National Electronic Disease Surveillance System). Duplicate cases are removed before the calculation, so each positive case is only included once. NOTE: State and local health department data will vary for a variety of reasons including data entry timing, communication processes, and 7-day averaging.

Total Positive

**300,398**

Probable: 60,061- Confirmed: 240,337

Deaths

**2,876**

Probable: 204- Confirmed: 2,672

Total Tested

**3,619,434**

PCR: 3,310,799- Serology: 103,544- Antigen: 205,091

Positivity Rate\*

**12.32%**

Recovered

**38,905**

\*Based on a 7-day rolling average; Switched on 10/19/2020 to electronic laboratory reports as the sole source of data for the positivity rate. Learn more about how KDPH determines the [Statewide Positivity Rate](#)

\*\*Over the Holidays we have experienced a significant decrease in reporting from major laboratories. Due to

this, a larger proportion of the electronically-submitted PCR test results used to calculate COVID-19 test positivity rates are coming from healthcare facilities. Healthcare facilities primarily test symptomatic people, which will increase the positivity rate until the usual general population testing is reported fully again. We expect to see increased fluctuations in the positivity rate through the New Year's holiday due to changes with laboratory schedules which impact testing and reporting.

**Note:** Data includes cases of COVID-19 reported to KDPH.
