Kentucky Coronavirus Monitoring

Current as of February 2, 2021

Kentucky county map showing which counties have the highest and lowest COVID-19 cases. Currently 45,978 cases.

Red County RecommendationsIf your county in the red, please follow the red county recommendations to help limit the spread ofCOVID-19 in your community.Red County Recommendations

The 7-Day incidence is calculated by taking the total number of unique cases in each county over the past 7 days, divided by 7 to get a daily average, divided by the U.S. census bureau county population, and multiplied by 100,000 to get the incidence per 100,000 people. The cases counted each day are based on the date an investigation was opened in NEDSS (i.e., National Electronic Disease Surveillance System). Duplicate cases are removed before the calculation, so each positive case is only included once. NOTE: State and local health department data will vary for a variety of reasons including data entry timing, communication processes, and 7-day averaging.
