Kentucky Coronavirus Monitoring

Current as of March 28, 2021

COVID-19 Current Incidence Rate in Kentucky

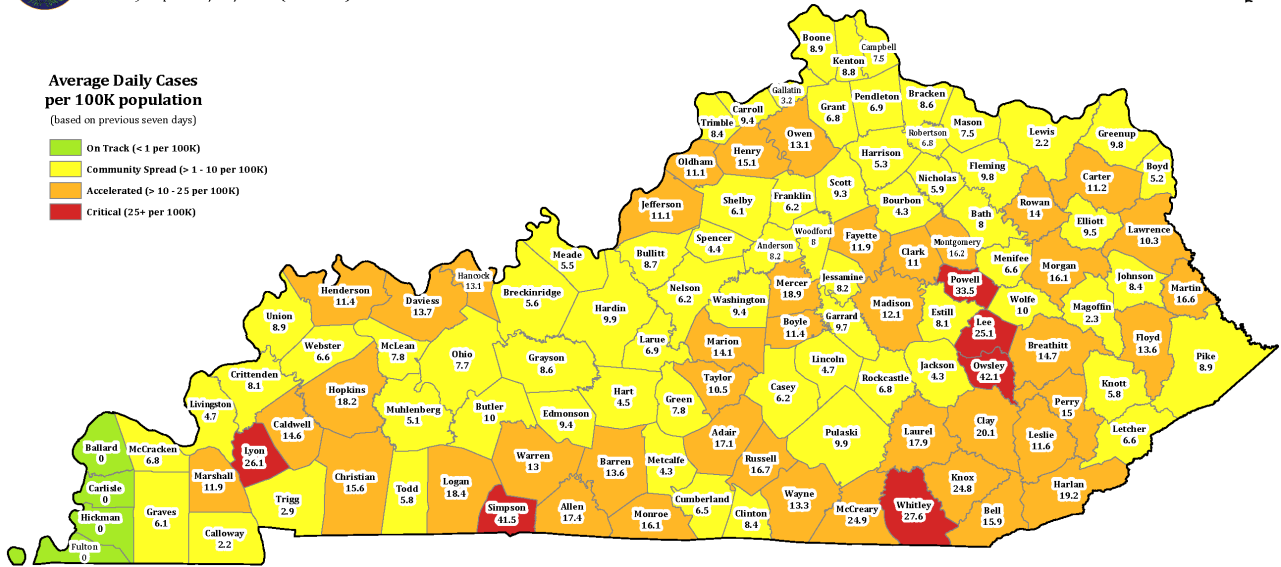

Date of Report: 3/28/2021 (2:42 PM)

Average Daily Cases per 100K population

(based on previous seven days)

- On Track (< 1 per 100K)
- Community Spread (> 1 - 10 per 100K)
- Accelerated (> 10 - 25 per 100K)
- Critical (25+ per 100K)

Overall Current Incidence Rate
10.96

Population values from the 2019 US Census Bureau Estimates

Total number of cases used in the calculations: 425,013 Cases

Data Source: Kentucky Department for Public Health

Red County Recommendations

If your county in the red, please follow the red county recommendations to help limit the spread of COVID-19 in your community.

Red County Recommendations

The 7-Day incidence is calculated by taking the total number of unique cases in each county over the past 7 days, divided by 7 to get a daily average, divided by the U.S. census bureau county population, and multiplied by 100,000 to get the incidence per 100,000 people. The cases counted each day are based on the date an investigation was opened in NEDSS (i.e., National Electronic Disease Surveillance System). Duplicate cases are removed before the calculation, so each positive case is only included once. NOTE: State and local health department data will vary for a variety of reasons including data entry timing, communication processes, and 7-day averaging.
