Long Term Care and Congregate Settings

| Measure | Count | Percent |
|---------|--------|---------|
| Cases | 38,267 | 12.9% |
| Deaths | 2,021 | 70.8% |

Current Positivity Rate

| Positive PCRs | Total PCRs | Positivity Rate |
|---------------|------------|-----------------|
| 12,185 | 102,293 | 11.91% |

Positivity rate is calculated using electronically submitted PCRs from the past seven days.
Over the Christmas and New Year's holidays, Kentucky has experienced a significant decrease in test reporting from major laboratories. We expect to see increased fluctuations in the 7-day positivity rate for the week following New Year's holiday due to changes with testing and reporting.

Current Overall Incidence Rate
71.71 per 100k population

The average daily incidence rates are calculated using the number of cases with an investigation start date in the previous seven days and a specimen collection date or onset date less than 14 days prior to the investigation start date. Populations used for the rate calculation are the 2019 estimates from the US Census Bureau.
