#### Coronavirus Disease 2019 (COVID-19)

Updated March 3, 2021

Mississippi COVID-19 Hotline (7 days a week, 7 a.m.-7 p.m.): 877-978-6453

Guidance for adults 65 and over, or 16 and older with medical conditions: All Mississippi residents aged 65 or older, or 16 and older with serious chronic medical conditions, should avoid all social gatherings outside of the household or any in-person mass gathering, including religious ceremonies, or sporting events, until fully protected by an approved COVID-19 vaccine. Details »

#### **ALL GUIDANCE**

Home isolation is mandatory if you have tested positive for COVID-19 by order of the State Health Officer. (If you are awaiting results of routine testing *not* related to exposure, you may return to work and follow the safety guidance of your employer.)

Quarantine is mandatory for household members of someone who has COVID-19. Home quarantine permits working under certain circumstances.

More about isolation and quarantine »

#### COVID-19 in Mississippi

New Cases and Deaths as of March 2

**NEW CASES** 

380

New COVID-19 positive test results reported to MSDH as of 3 p.m. yesterday.

TOTAL MISSISSIPPI CASES
295,675
▶ Totals by county
NEW DEATHS
19
New COVID-19 related deaths reported to MSDH as of 3 p.m. yesterday.
Eight deaths occurred between February 3 and March 2 in the counties below:
► County list
Eleven deaths occurred between February 7 and February 23, identified from death certificate reports.
► County list
TOTAL MISSISSIPPI DEATHS
6,743
LTC OUTBREAKS
61

Current outbreaks in long-term care (LTC) facilities only. (See LTC facility outbreak definition.)

Cases by county

About our case counts: We currently update our case totals each day based on test results from the previous day. Outside laboratories also report positive test results to us, which are included in our totals. Multiple positive tests for the same individual are counted only once. County case numbers and deaths may change as investigation finds new or additional information.

#### **Case Classifications**

Mississippi investigates and reports both probable and confirmed cases and deaths according to the CSTE case definition.

	Confirmed	Probable	Total
Cases	183,292	112,383	295,675
Deaths	4,705	2,038	6,743

Confirmed cases and deaths are generally determined by positive PCR tests, which detect the presence of ongoing coronavirus infection.

Probable cases are those who test positive by other testing methods such as antibody or antigen, and have recent symptoms consistent with COVID-19, indicating a recent infection.

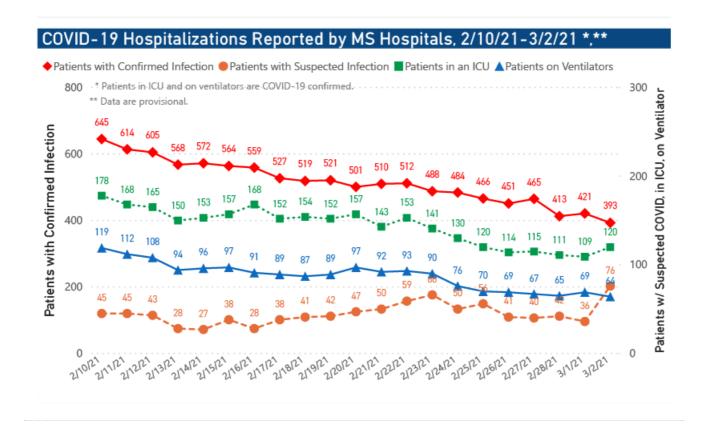

Probable deaths are those individuals with a designation of COVID-19 as a cause of death on the death certificate, but where no confirmatory testing was performed.

#### Daily Statewide Data Charts

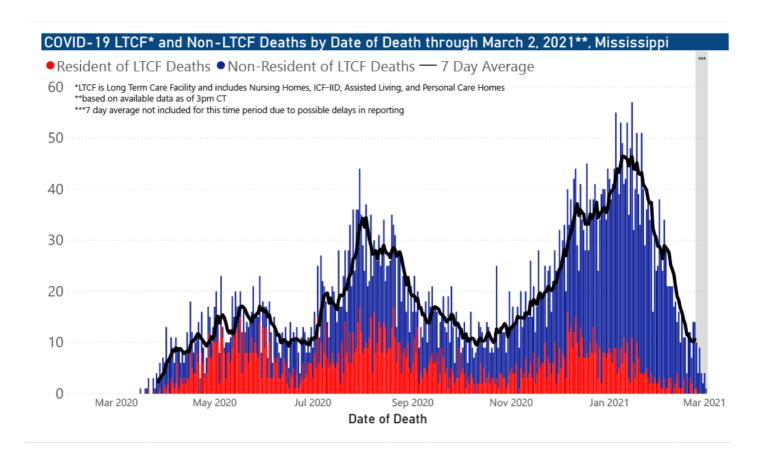

Our state case map and other data charts are also available in interactive form.

▶ View interactive epidemiological and surveillance charts

The charts below are based on available data at the time of publication. Charts do not include cases where insufficient details of the case are known.

Note: Values up to two weeks in the past on the chart of Cases by Date above can change as we update it with new information from disease investigation.

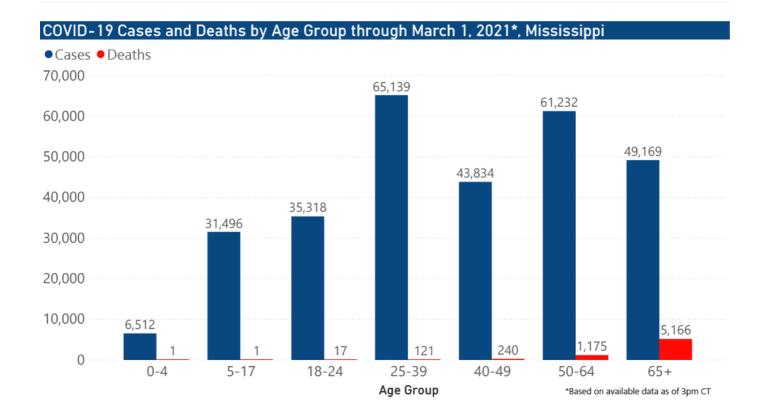

#### Weekly Statewide Data Charts

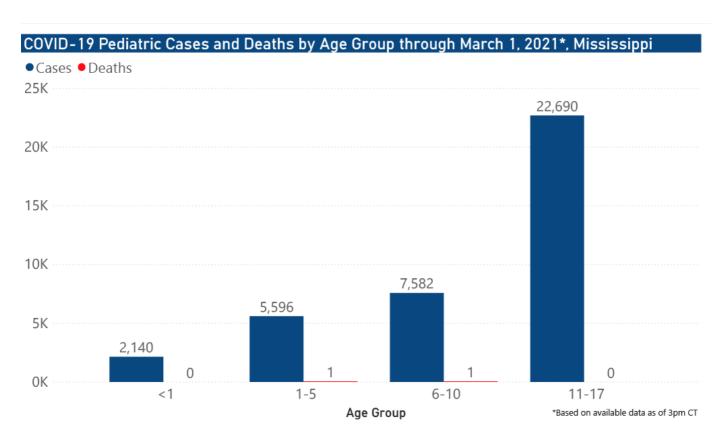

#### Includes:

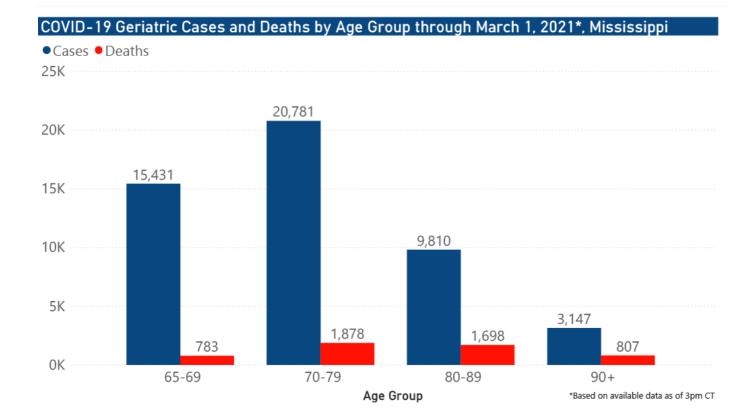

• Cases, deaths and hospitalizations, analyzed by age, race/ethnicity, gender and other factors

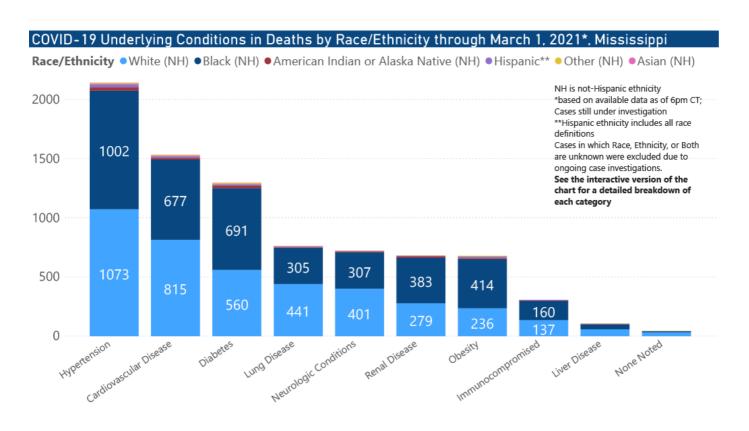

- MIS-C cases and deaths
- Counties with high COVID-19 cases and incidence
- Syndromic surveillance

▼ All weekly charts

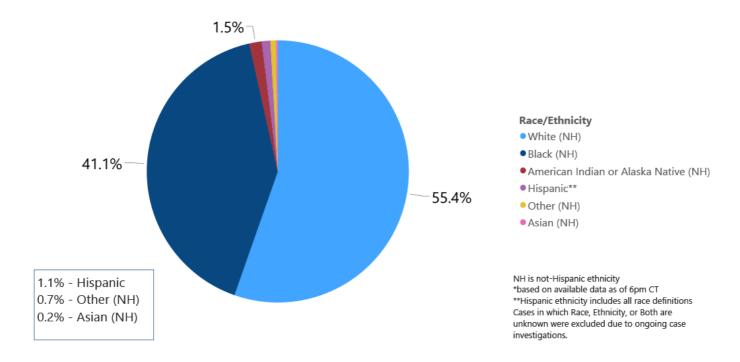

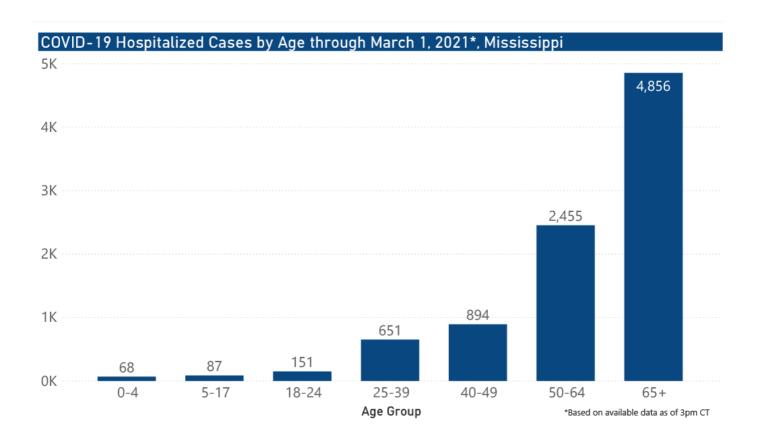

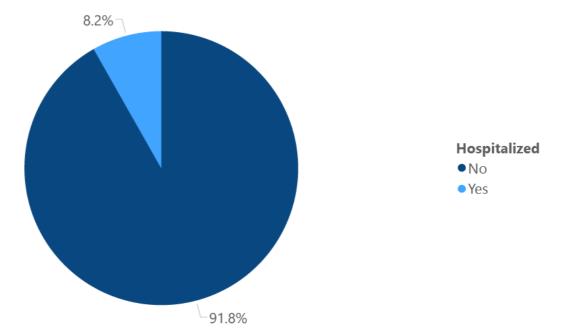

#### COVID-19 Deaths by Race/Ethnicity through March 1, 2021\*, Mississippi

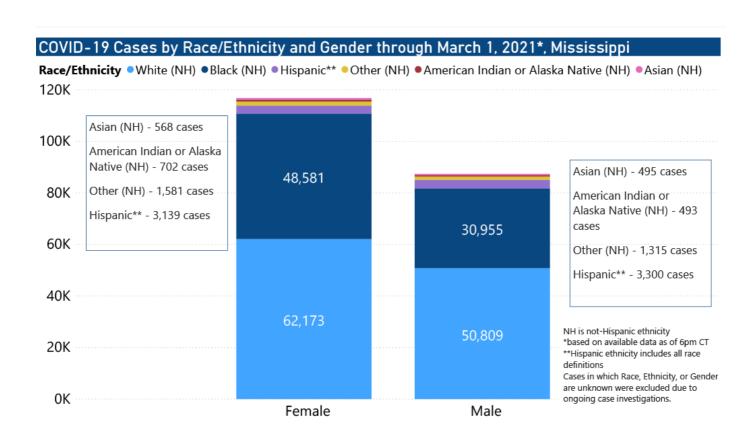

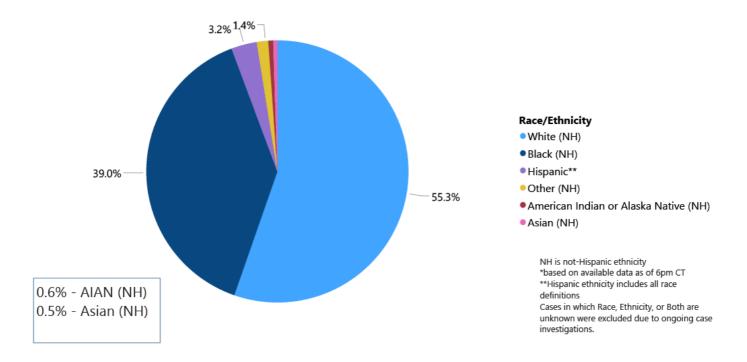

#### COVID-19 Cumulative Hospitalizations-Investigated Cases March 1, 2021 \*

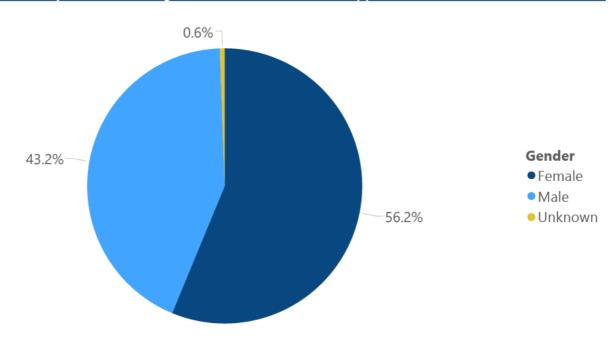

<sup>\*</sup> Cases in which hospitalization is unknown were excluded due to ongoing case investigations; based on available data as of 3pm CT

#### COVID-19 Cases by Race/Ethnicity through March 1, 2021\*, Mississippi

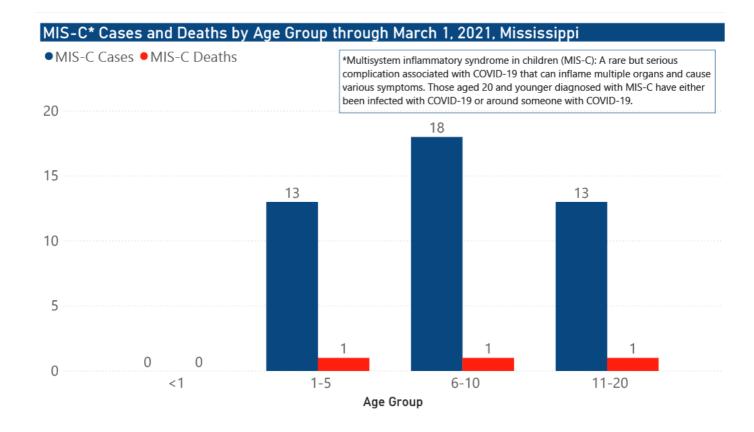

#### COVID-19 Cases by Gender through March 1, 2021\*, Mississippi

\*Based on available data as of 3pm CT

#### Weekly Pediatric MIS-C Cases and Deaths

Multisystem inflammatory syndrome in children (MIS-C) is a rare but serious condition associated with COVID-19 that causes inflammation in many body parts, including the heart and other vital organs.

#### Weekly High Case and High Incidence Counties

Tracking counties with recent high numbers of COVID-19 cases, adjusted for population, provides insight on where local outbreaks are most serious, and where protective measures should be increased. For more accurate reporting, these weekly charts include sample collection dates only up to seven days in the past to allow for case investigation and delays in lab test reports.

Cases counts in these charts is based on the date of illness onset. If the date of illness is not known, the date the test sample was taken, or the date of test result reporting is used instead. Counts are adjusted as cases are investigated.

Counties are ranked by highest weekly case counts, and by weekly incidence (cases proportional to population). A separate table ranking all counties is also available. All tables updated weekly.

#### Syndromic Surveillance

Emergency department visits by those with symptoms characteristic of COVID-19, influenza and pneumonia, updated weekly.

#### Percentage of Emergency Department and Clinic visits for CLI, ILI, and Pneumonia Cases Weekly Statewide Summary, January 4, 2020 - February 27, 2021

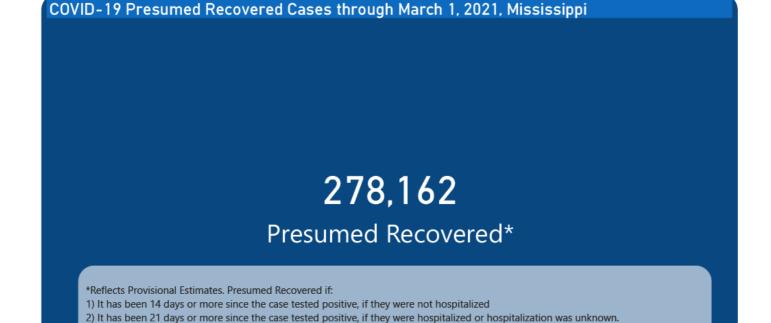

#### **Estimated Recoveries**

Based on available data as of 6pm CT. Graph will be updated weekly.

All deaths excluded. Presumed recovered counts will be updated weekly.

Presumed COVID-19 cases recovered, estimated weekly (does not include cases still under investigation).

- ▶ COVID-19 cases in the United States (CDC)
- ▶ U.S. COVID-19 Tracker (CDC)
- COVID-19 Global Case Map (Johns Hopkins University)

#### **COVID-19 Testing**

#### Statewide Combined Testing as of February 28

COVID-19 testing providers around the state include commercial laboratories, hospital labs and the MSDH Public Health Laboratory results from all these sources are combined in the table below. (Updated weekly)

PCR testing detects current, active COVID-19 infection in an individual.

Antibody (serology) testing identifies individuals with past COVID-19 infection based on antibodies they develop one to three weeks after infection.

Antigen testing is another way to identify current COVID-19 infection.

PCR tests	1,642,348
Serology (antibody) tests	81,986
Antigen tests	748,339
Total tests	2,472,673
