## COVID-19 in Mississippi

New Cases and Deaths as of June 1

#### **NEW DEATHS**

5

New COVID-19 related deaths reported to MSDH as of 3 p.m. yesterday.

Five deaths occurred between May 28 and May 31 in the counties below:

▶ County list

#### TOTAL MISSISSIPPI DEATHS

#### LTC OUTBREAKS

15

Current outbreaks in long-term care (LTC) facilities only. (See LTC facility outbreak definition.)

**About our case counts:** We currently update our case totals each weekday based on test results from the previous day (or weekend). Outside laboratories also report positive test results to us, which are included in our totals. Multiple positive tests for the same individual are counted only once. County case numbers and deaths may change as investigation finds new or additional information.

#### Cumulative Cases and Deaths by County

Totals of all reported COVID-19 cases, including those in long-term care (LTC) facilities.

Long-term care case and death totals by county are undergoing data review and are not currently available.

The numbers in this table are provisional. County case and deaths totals may change as investigation finds new or additional information.

Total	317,856	7,322	10,479	1,982

<sup>\*</sup> **Note:** A death previously reported in Warren County was later determined not to be COVID-19 related, and has been corrected.

#### **Case Classifications**

Mississippi investigates and reports both probable and confirmed cases and deaths according to the CSTE case definition.

	Confirmed	Probable	Total
Cases	194,566	123,290	317,856
Deaths	5,049	2,273	7,322

Confirmed cases and deaths are generally determined by positive PCR tests, which detect the presence of ongoing coronavirus infection.

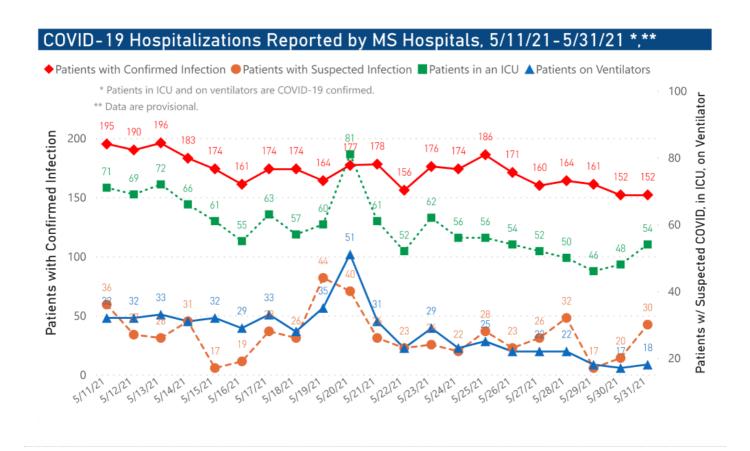

Probable cases are those who test positive by other testing methods such as antibody or antigen, and have recent symptoms consistent with COVID-19, indicating a recent infection.

Probable deaths are those individuals with a designation of COVID-19 as a cause of death on the death certificate, but where no confirmatory testing was performed.

<sup>\*</sup> Cases based on **Event Date**. Event date is date of onset, date of collection, or date of report to MSDH; updated as cases are investigated.

<sup>\*\*</sup> Rate calculation is based on cumulative cases of past two weeks per 100,000 population.

Total cases and deaths by county since the start of the pandemic. Also see weekly estimate of recoveries

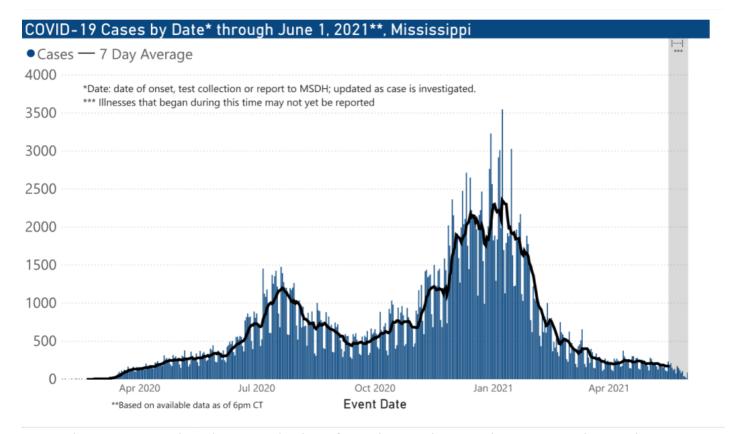

## Daily Statewide Data Charts

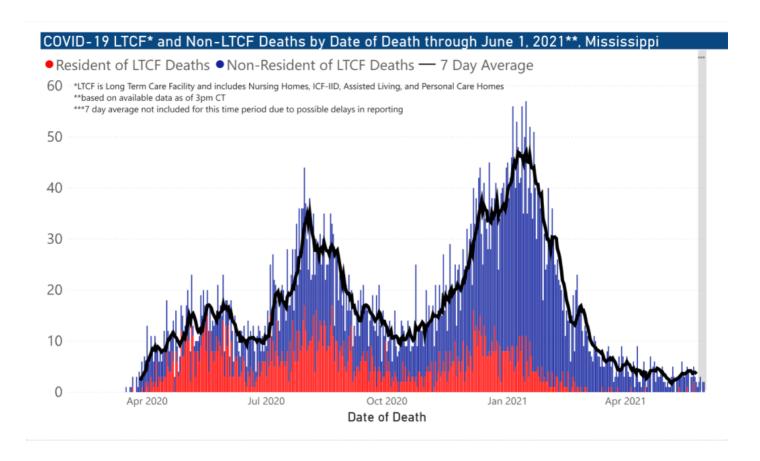

Our state case map and other data charts are also available in interactive form.

▶ View interactive epidemiological and surveillance charts

The charts below are based on available data at the time of publication. Charts do **not** include cases where insufficient details of the case are known.

**Note:** Values up to two weeks in the past on the chart of Cases by Date above can change as we update it with new information from disease investigation.

## Weekly Statewide Data Charts

#### Includes:

• Cases, deaths and hospitalizations, analyzed by age, race/ethnicity, gender and other factors

- · MIS-C cases and deaths
- Counties with high COVID-19 cases and incidence
- Syndromic surveillance
- ► All weekly charts

#### **Estimated Recoveries**

Presumed COVID-19 cases recovered, estimated weekly (does not include cases still under investigation).

COVID-19 Presumed Recovered Cases through May 31, 2021, Mississippi

308,103

## Presumed Recovered\*

\*Reflects Provisional Estimates. Presumed Recovered if:

- 1) It has been 14 days or more since the case tested positive, if they were not hospitalized
- 2) It has been 21 days or more since the case tested positive, if they were hospitalized or hospitalization was unknown.

All deaths excluded. Presumed recovered counts will be updated weekly.

## **COVID-19 Testing**

### Statewide Combined Testing as of May 30

COVID-19 testing providers around the state include commercial laboratories, hospital labs and the MSDH Public Health Laboratory results from all these sources are combined in the table below. (Updated weekly)

PCR testing detects current, active COVID-19 infection in an individual.

Antibody (serology) testing identifies individuals with past COVID-19 infection based on antibodies they develop one to

three weeks after infection.

**Antigen** testing is another way to identify current COVID-19 infection.

Total tests	2,806,475
Antigen tests	889,876
Serology (antibody) tests	94,787
PCR tests	1,821,812
