COVID-19 Data for Pennsylvania

Page last updated: 1:00 p.m. on 11/3/2020

Total Cases*	Negatives**	Recovered***	Total PCR Tests
214,871	**2,354,346**	**75%**	**4,156,387**

Total cases, negatives, and recovered represent unique individuals. Total PCR Tests can include numerous tests for the same indiv

case counts include confirmed and probable cases. ** Negative case data only includes negative PCR tests. Negative case data do

include negative antibody tests. *** Individuals who have recovered is determined using a calculation, similar to what is being don

other states. If a case has not been reported as a death, and it is more than 30 days past the date of their first positive test (or onse

symptoms) then an individual is considered recovered.

Expand All

The administration's decisions surrounding the managing of the COVID-19 pandemic are data-driven, literature-based and follow established public health practices. The department uses statewide and national data as well as peer-reviewed literature, and guidance from the CDC and White House when making public health decisions. Decisions are based on science and facts.
