About Our Data

The administration's decisions surrounding the managing of the COVID-19 pandemic are data-driven, literature-based and follow established public health practices. The department uses statewide and national data as well as peer-reviewed literature, and guidance from the CDC and White House when making public health decisions. Decisions are based on science and facts.

^{*} Total case counts include confirmed and probable cases.

^{**} Negative case data only includes negative PCR tests. Negative case data does not include negative antibody tests.

^{***} Individuals who have recovered is determined using a calculation, similar to what is being done by several other states. If a case has not been read and it is more than 30 days past the date of their first positive test (or onset of symptoms) then an individual is considered recovered.

COVID-19 Dashboard

The COVID-19 Dashboard, which is updated each day at noon, discloses the number of confirmed and probable cases, negative test results, deaths, ZIP-code level data, hospital preparedness, and case and death demographics. This information is also available for download.

Note: The COVID-19 Data Dashboard does not load properly in Internet Explorer. It is recommended to use Chrome, Edge or Firefox to view the dashboard.

County Case Counts to Date

Each day the Department of Health provides updated case, testing, and death information. Archived information dating back to the beginning of the pandemic is also available. Case counts are displayed by the date that the cases were first reported to the PA-NEDSS surveillance system. Case counts by date of report can vary significantly from day to day for a variety of reasons. In addition to changes due to actual changes in disease incidence, trends are strongly influenced by testing patterns (who gets tested and why), testing availability, lab analysis backlogs, lab reporting delays, new labs joining our electronic laboratory reporting system, mass screenings, etc. Trends need to be sustained for seven to 14 days before any conclusions can be made regarding the progress of the pandemic. Source: Pennsylvania National Electronic Disease Surveillance System (PA-NEDSS) as of 10:00 PM on 3/25/2021.

Long-Term Care Facility Data

<u>Long-term care facility by county</u> is updated each day at noon and long-term care facilities by facility updated each Tuesday. Use this data to see COVID-19 cases associated with long-term care facilities, to date.

Multisystem Inflammatory Syndrome Data

Multisystem inflammatory syndrome in children (MIS-C) is a condition where different body parts can become inflamed, including the heart, lungs, kidneys, brain, skin, eyes, or gastrointestinal organs. We do not yet know what causes MIS-C. Many children with MIS-C had the virus that causes COVID-19, or had been around someone with COVID-19.

Epicurve by Region and Date of First Report

OpenData

The Department of Health has made case, death, and hospitalization data available since the beginning of the pandemic through the commonwealth's OpenData platform.

- Vaccinations
- Cases
- Deaths
- Hospitalizations

The commonwealth's OpenData platform also shows how the commonwealth's public-facing services are providing relief and support to those in need at this time. Information included is data from the Department of Labor & Industry regarding unemployment compensation, data from the Department of Human Services on its Office of Income Maintenance Call Center, and data from the Department of Health on calls to the 1-877-PA-HEALTH line.

External Resources

CHOP Policy LAB: Mapping COVID-19 In Your Community

The Children's Hospital of Philadelphia and the University of Pennsylvania developed a resource to track and model COVID in the United States. According to CHOP, the team used data from a variety of publicly available sources, the researchers built their model to observe how social distancing, population density, and daily temperatures affect the number and spread of COVID-19 infections over time across a county, accounting for test positivity rates and population characteristics, such as age, insurance status and smoking prevalence.

COVIDcast Real-Time COVID-19 Indicators

Carnegie Mellon University, along with partners, developed <u>COVIDcast</u>. It provides data, modeling, and tracking for the COVID pandemic.

CDC Reports

View nationwide COVID-19 data in the CDC's Morbidity and Mortality Weekly Report.

Projections from Institute for Health Metrics and Evaluation

Instute for Health Metrics and Evaluation (IHME) <u>produces COVID-19 projections</u> that were developed in response to requests from the University of Washington School of Medicine and other US hospital systems and state governments working to determine when COVID-19 would overwhelm their ability to care for patients.

Archived Data

Archived Case Data

View <u>archived case data</u> from the beginning of the pandemic.

Archived County Dashboard

During the reopening process, the Department of Health maintained a <u>county dashboard</u> to help determine the reopening process.

Press Releases

The administration shares daily press releases at noon, six days a week, with current data.

Governor's Goals

GOVERNMENT THAT WORKS

Stem the tide of the opioid epidemic

GOVERNMENT THAT WORKS

Increase access to health care

GOVERNMENT THAT WORKS

Provide high-quality supports and protections to vulnerable Pennsylvanians

TOM WOLF, GOVERNOR
ALISON BEAM, ACTING SECRETARY
