Coronavirus Disease 2019

There is an ongoing outbreak of respiratory illness that originated in Wuhan, China caused by a new type of coronavirus (SARS-CoV-2). There are a number of cases globally including the United States. On February 26th, the CDC confirmed a possible instance of community spread in the United States.

Coronaviruses are a large family of viruses, some causing respiratory illness in people. Signs and symptoms, similar to the common cold or the flu, include a runny nose, cough, sore throat, fever, and general feeling of being unwell.

For the most up-to-date information on the outbreak, please visit the CDC's COVID-19 website.

If you traveled to China or other areas currently affected by COVID-19 and feel sick with fever, cough, or difficulty breathing, you should:

- Avoid contact with others.
- Do not travel while sick.
- Cover your mouth and nose with a tissue or your sleeve (not your hands) when coughing or sneezing.

- Wash hands often with soap and water for at least 20 seconds or using an alcohol-based hand sanitizer that contains at least 60% alcohol immediately after coughing, sneezing or blowing your nose.
- If you need to seek medical care, before going to your doctor's office, call ahead and tell them about your recent travel and your symptoms.
- Discuss travel to China with your healthcare provider. Older adults and travelers with chronic medical conditions may be at risk for more severe disease.
