Data is updated daily by about 4 p.m. and includes cases reported through the previous day. This reporting gap gives our epidemiologists time to review the data and improve the accuracy. Due to this delay, our numbers may be different than what is being reported by local public health departments. As cases continue to be investigated the data in this report is subject to change.

Colorado Case Summary (Updated 3/30/20 at 4:00 p.m.)

Note: This summary only includes data through 3/29 and does not reflect cases since then.

2,627 cases*
414 hospitalized
47 counties
15,364 people tested
51 deaths
14 outbreaks at residential and non-hospital health care facilities

*The number of cases includes people who have had a test that indicated they were positive for COVID-19. The number of cases also includes epidemiologically-linked cases -- or cases where public health epidemiologists have determined that infection is highly likely because a person exhibited symptoms and had close contact with someone who tested positive. The number of epidemiologically-linked cases represents a very small portion of the reported cases.

Due to high traffic, it may take a little longer to load. If this page remains blank or the data doesn't match, please try hitting the refresh button on your browser. Thank you for your patience.
