Data	›

Data is updated daily by about 4 p.m. and includes cases reported through the previous day. This reporting gap gives our epidemiologists time to review the data and improve the accuracy. Due to this delay, our numbers may be different than what is being reported by local public health departments. As cases continue to be investigated the data in this report is subject to change.

13,879

Cases*

2,485

Hospitalized

56

Counties

66,341

People tested**

144

Outbreaks

706*

Deaths

Last update: April 27, 2020 | 4 p.m.

*You may notice that the cumulative number of deaths went from 674 on April 24th, to 672 on April 25th. This is due to the fact that a portion of "probable deaths" gathered from death certificate data were entered as duplicates. There were about 29 duplicates and they have been removed today.

Note: This summary only includes data through April 26 and does not reflect cases since then.

*The number of cases includes people who have had a test that indicated they were positive for COVID-19. The number of cases also includes epidemiologically-linked cases -- or cases where public health epidemiologists have determined that infection is highly likely because a person exhibited symptoms and had close contact with someone who tested positive. The number of epidemiologically-linked cases represents a very small portion of the reported cases.

**The total number of people tested may not include all negative results.
