[Data](#)

Data is updated daily by about 4 p.m. and includes cases reported through the previous day. This reporting gap gives our epidemiologists time to review the data and improve the accuracy. Due to this delay, our numbers may be different than what is being reported by local public health departments. As cases continue to be investigated the data in this report is subject to change.

14,316

Cases*

2,571

Hospitalized

56

Counties

67,094

People tested**

149

Outbreaks

736*

Deaths

Last update: April 28, 2020 | 4 p.m.

Note: This summary only includes data through April 27 and does not reflect cases since then.

*The number of cases includes people who have had a test that indicated they were positive for COVID-19. The number of cases also includes epidemiologically-linked cases -- or cases where public health epidemiologists have determined that infection is highly likely because a person exhibited symptoms and had close contact with someone who tested positive. The number of epidemiologically-linked cases represents a very small portion of the reported cases.

Cases reported on April 23 were in part due to a large number of backlogged tests being received from Quest.

You may notice that the cumulative number of deaths went from 674 on April 24th, to 672 on April 25th. This is due to the fact that a portion of "probable deaths" gathered from death certificate data were entered as duplicates. There were about 29 duplicates and they have been removed.

**The total number of people tested may not include all negative results.
