

COVID-19 Update October 01, 2020

As of **September 30, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **57742**, including **55306** laboratory-confirmed and **2436** probable cases. **One hundred seven** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4511** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Probable cases of COVID-19 involve persons who have not had confirmatory laboratory testing (RT-PCR) performed for COVID-19 whose symptoms indicate they are likely to have a COVID-19 infection. In Connecticut, most of the probable COVID-19 cases involve persons whose death certificates list COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Prior to June 1, probable and confirmed cases were reported together.

| Overall Summary | Total** | Change Since Yesterday |
|---|---------|------------------------|
| COVID-19 Cases | 57742 | +192 |
| COVID-19-Associated Deaths | 4511 | +3 |
| Patients Currently Hospitalized with COVID-19 | 107 | +3 |
| COVID-19 PCR Tests Reported | 1601944 | +10372 |

***Includes confirmed plus probable cases*

COVID-19 Cases and Associated Deaths by County of Residence

As of 09/30/20 8:30pm.

| County | COVID-19 Cases | | COVID-19-Associated Deaths | |
|-----------------------------------|----------------|-------------|----------------------------|------------|
| | Confirmed | Probable | Confirmed | Probable |
| Fairfield County | 19436 | 828 | 1108 | 314 |
| Hartford County | 14175 | 699 | 1117 | 322 |
| Litchfield County | 1791 | 99 | 120 | 21 |
| Middlesex County | 1531 | 73 | 154 | 39 |
| New Haven County | 13987 | 533 | 958 | 157 |
| New London County | 2009 | 78 | 89 | 29 |
| Tolland County | 1260 | 110 | 52 | 15 |
| Windham County | 992 | 12 | 15 | 1 |
| <i>Pending address validation</i> | 125 | 4 | 0 | 0 |
| Total | 55306 | 2436 | 3613 | 898 |

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week. All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

COVID-19 Cases Over Time

The chart below shows the number of new COVID-19 cases reported to CT DPH by week of specimen collection or onset of illness. There were 1222 new COVID-19 cases with onset or specimen collected during September 20–26, corresponding to an average of 4.9 new cases per 100,000 population per day. In comparison, there were an average of 2.3 new cases per 100,000 population per day during July 19–August 15.

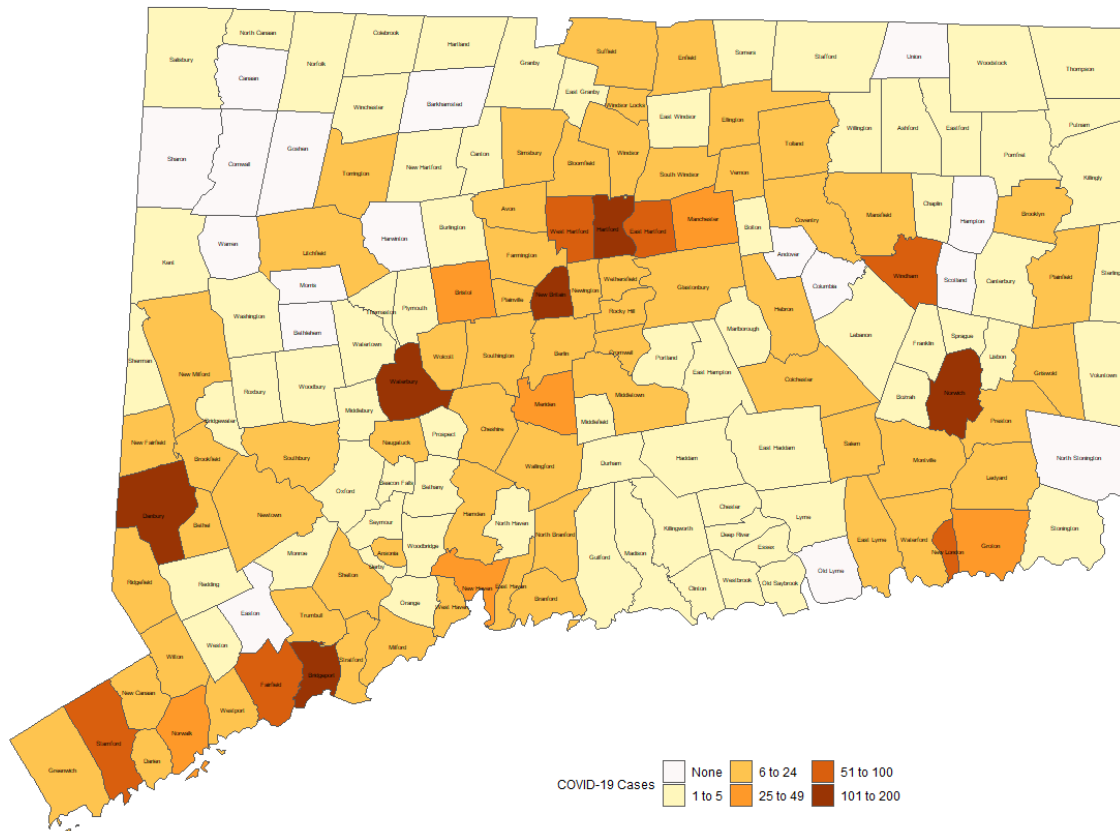

Shading indicates data are incomplete for the current week.

Community Transmission of COVID-19

The map below shows the distribution of 2251 new COVID-19 cases during September 13–26 among people living in community settings. Cases among persons residing in nursing homes, assisted living facilities, and correctional facilities are excluded. Darker colors indicate towns with more cases.

During this two-week period, there were more than 100 new COVID-19 cases in six towns: Bridgeport, Danbury, Hartford, New Britain, Norwich, and Waterbury.

Number of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date During September 13-26

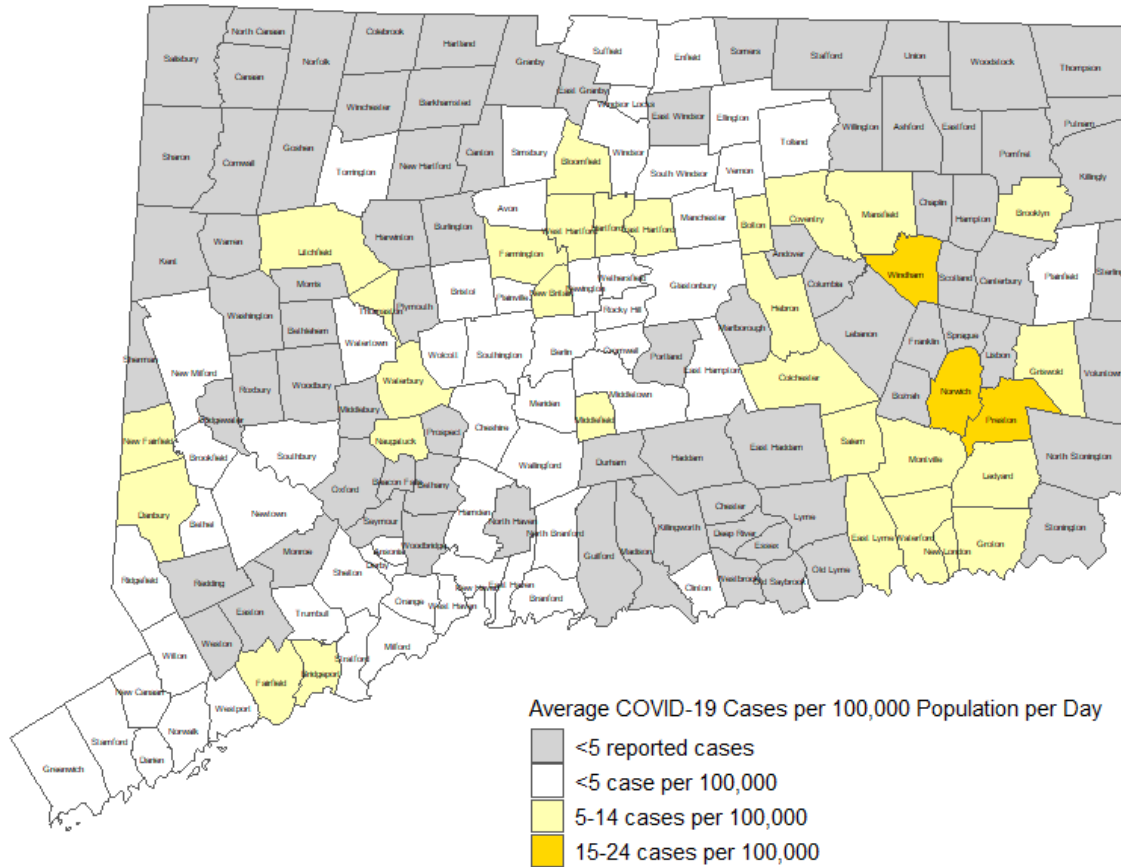

Map does not include 9 cases pending address validation.

Because towns with larger populations are likely to have more cases, it is also important to look at the number of new cases per 100,000 population. The next map below shows the average number of new cases per 100,000 population per day, with darker colors indicating higher rates. Cases among persons residing in nursing homes, assisted living facilities, and correctional facilities are excluded.

Among towns with at least 5 new COVID-19 cases during September 13–26, 3 towns had an average rate of more than 15 cases per 100,000 population per day (Norwich, Preston, and Windham). Four towns had an average rate of 10-15 cases per 100,000 population per day (Danbury, New Britain, New London, and Salem).

Average Daily Rate of COVID-19 Cases among Persons Living in Community Settings per 100,000 Population by Town with Specimen Collection or Onset Date During September 13-26

Map does not include 9 cases pending address validation.

Population, Number and Average Daily Rate of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date during September 13–26, 2020

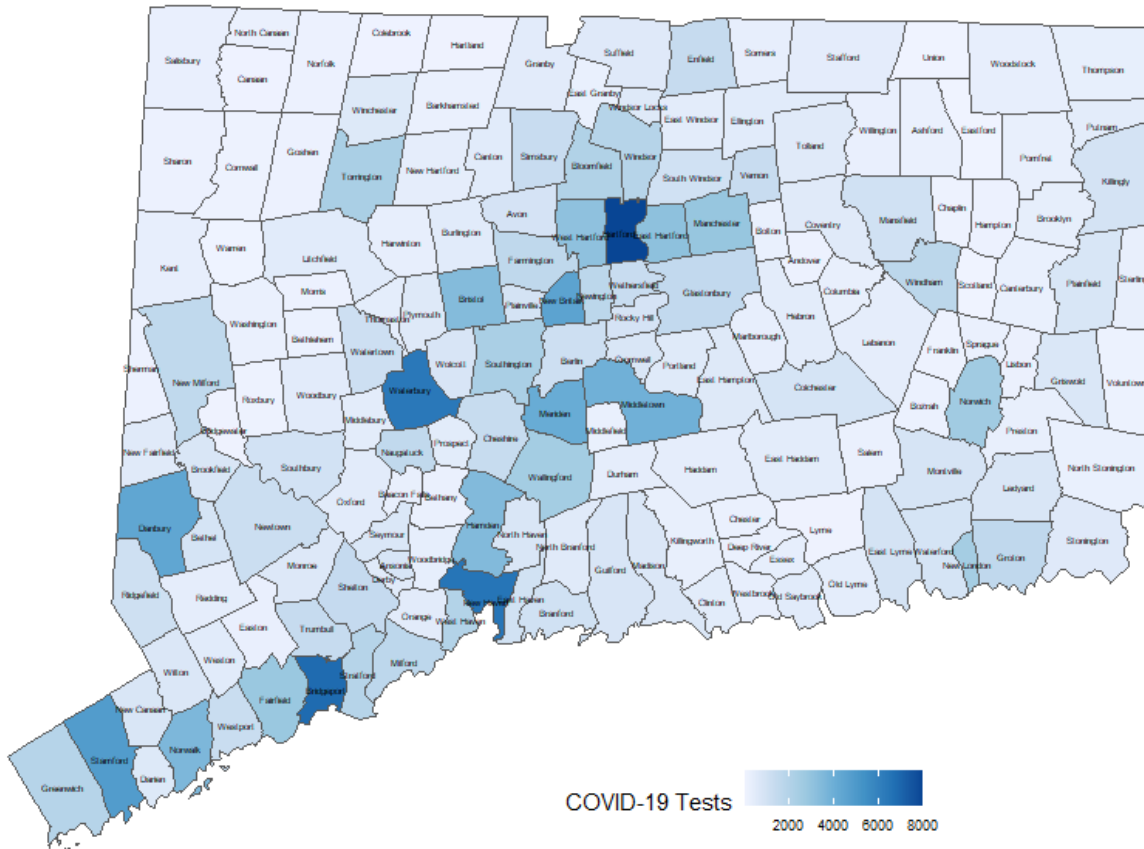

Table does not include 9 cases pending address validation. Daily rate is average number of cases per day per 100,000 population.

| Town | Pop | Cases | Rate | Town | Pop | Cases | Rate | Town | Pop | Cases | Rate |

COVID-19 PCR Tests during September 13–26, 2020

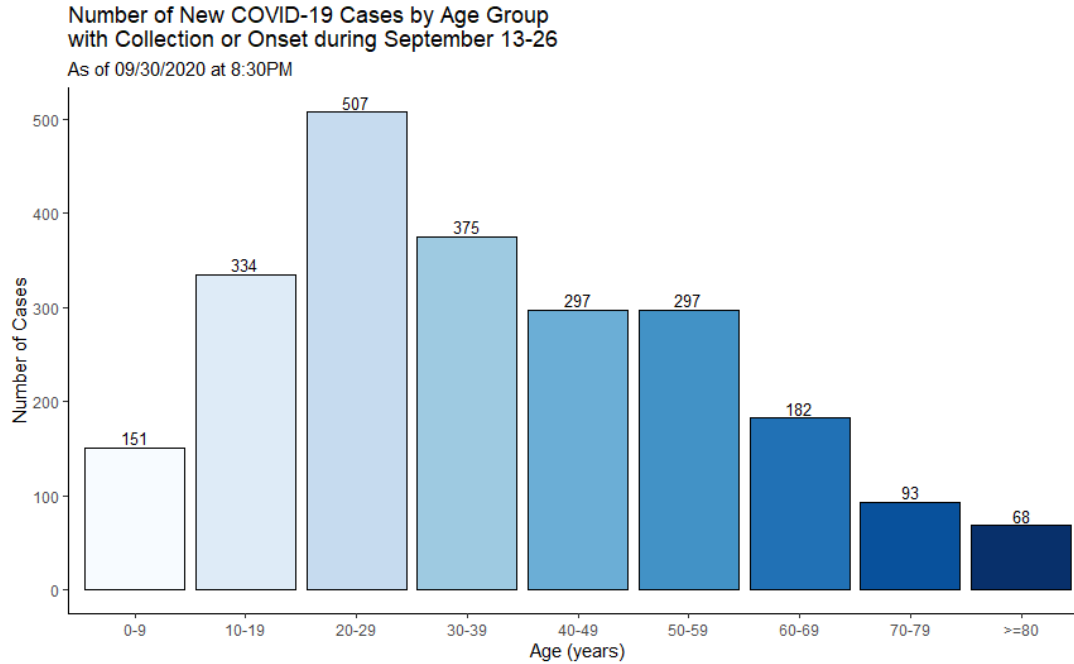

Among 195,836 PCR tests for COVID-19 with specimen collection date during September 13–26, 176,793 (90%) tests were conducted among people who did not reside in congregate settings (including nursing homes, assisted living, and correctional facilities). Of these 176,793 tests, 2550 (1%) were positive. The map below shows the number of PCR COVID-19 tests by town with specimen collection date during September 13–26 that were conducted among community residents.

Number of PCR Tests for COVID-19 among Persons Living in Community Settings by Town with Specimen Collection Date During September 13-26

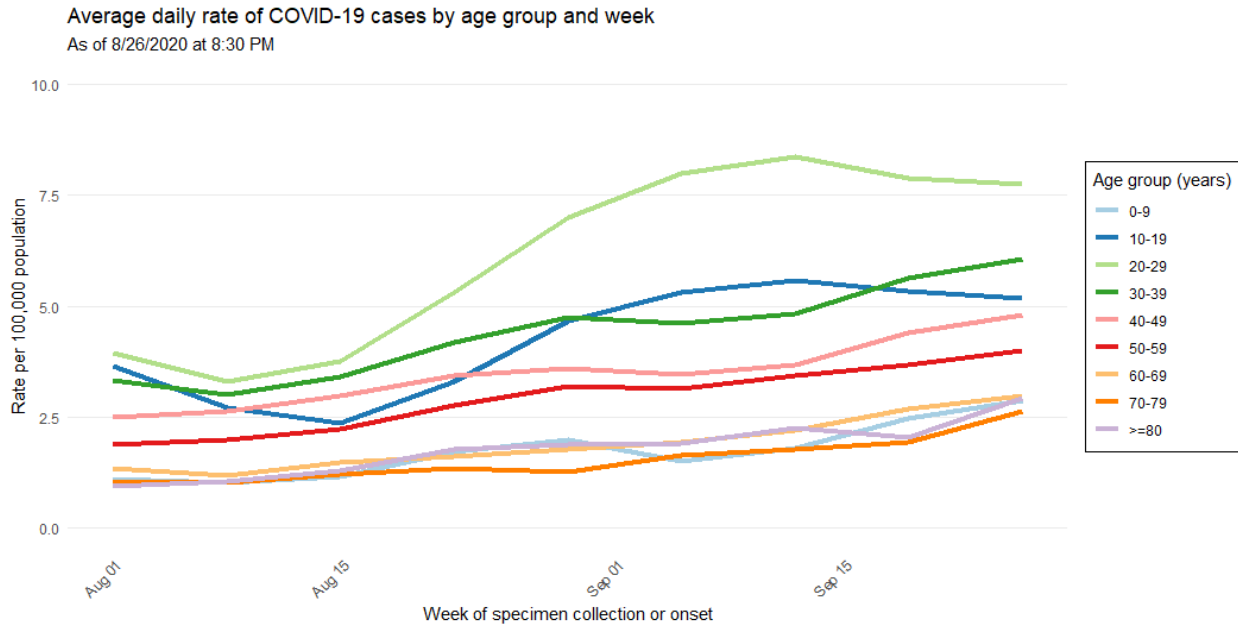

Map does not include 5332 test results pending address validation.

Age Distribution of COVID-19 Cases with Specimen Collection or Onset During September 13–26, 2020

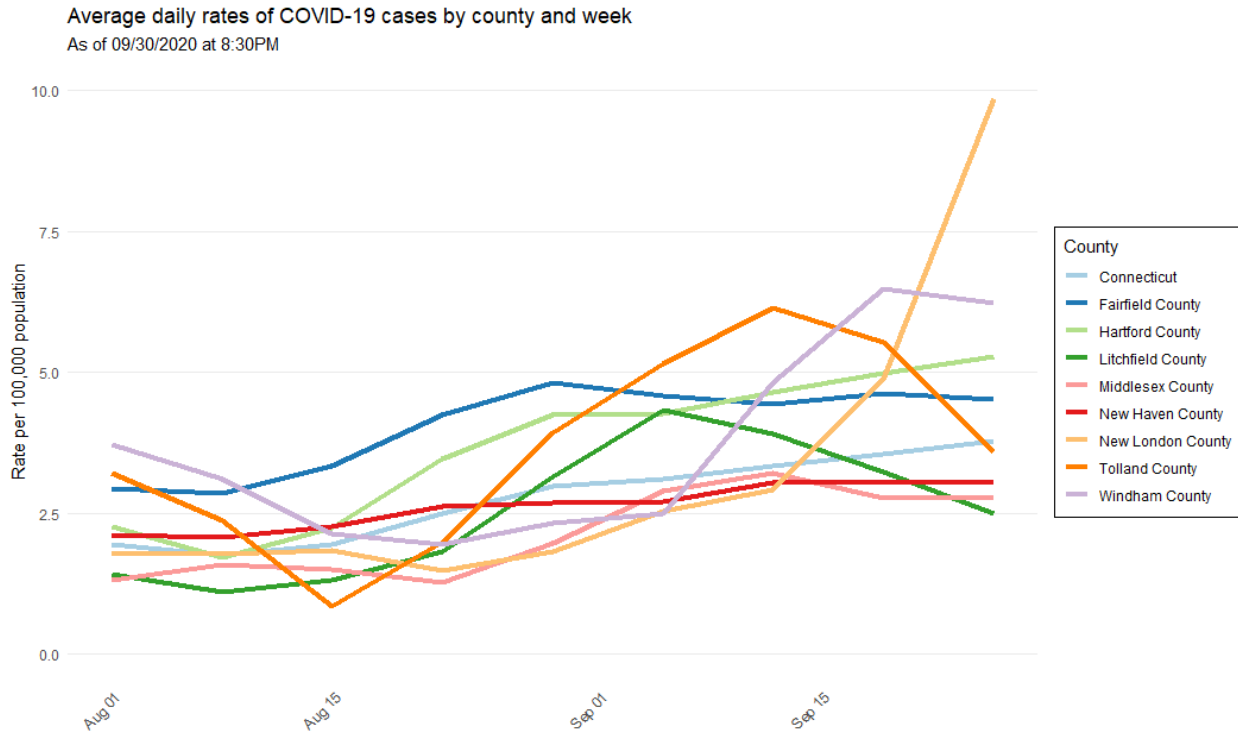

Average Daily Incidence by Age Group

The chart below shows the average number of new COVID-19 cases per day per 100,000 population by age group. The rates in this chart are calculated by averaging the number of new cases diagnosed each day during the previous two weeks, dividing by the annual population in each age group and then multiplying by 100,000.

Average Daily Incidence by County

The chart below shows the average number of new COVID-19 cases per day per 100,000 population in the state of Connecticut and for each Connecticut county. The rates in this chart are calculated by averaging the number of new cases diagnosed per day during the previous two weeks, dividing by the annual estimated population and then multiplying by 100,000.

Notes: Cases pending address validation are excluded from rate calculations.

Cumulative Number of COVID-19 Cases and COVID-19-Associated Deaths by Date

Test results may be reported several days after the result. Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.

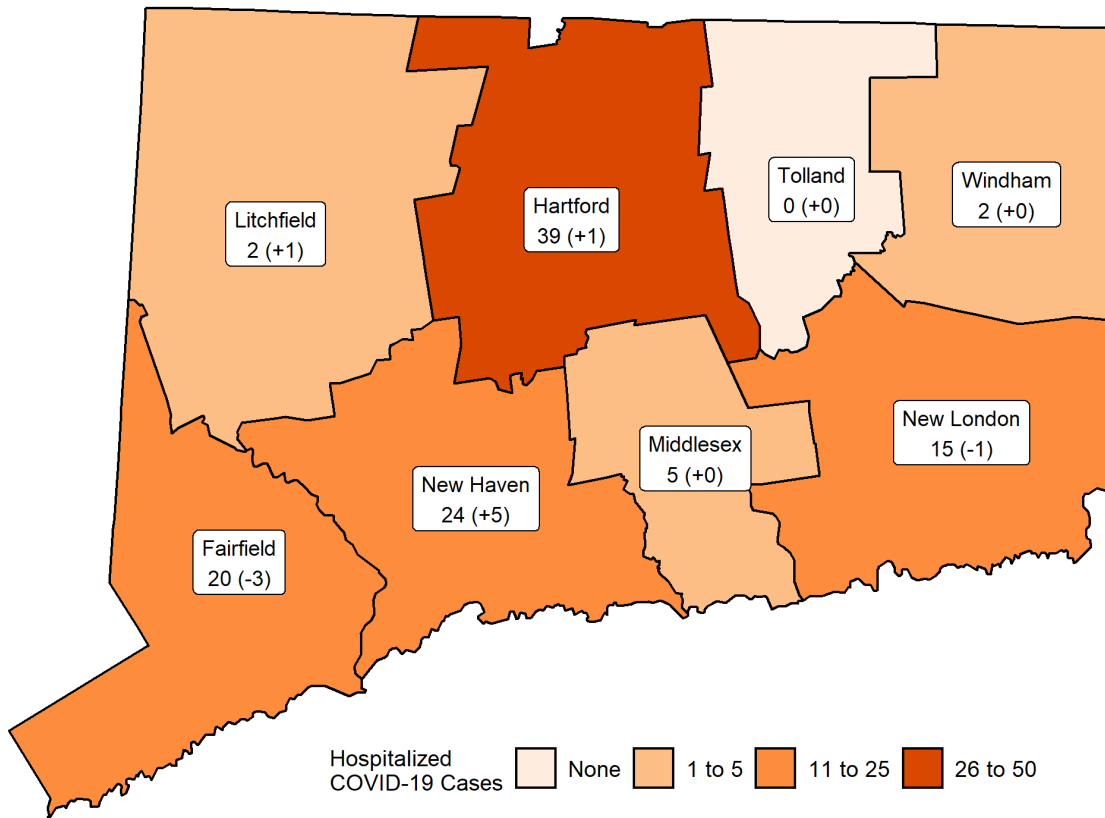

Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

Patients Currently Hospitalized by Connecticut County

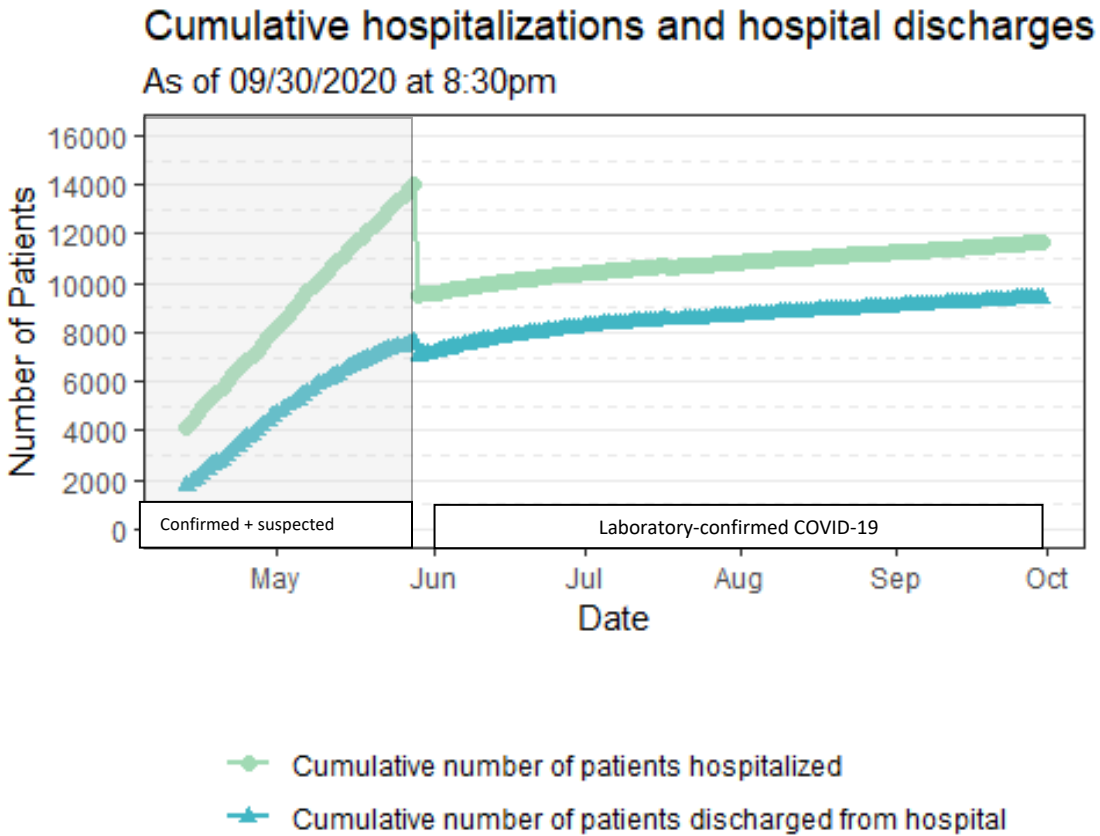

Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

Cumulative hospitalizations and cumulative hospital discharges for COVID-19

The chart below shows information on cumulative hospitalizations and hospital discharges for patients with COVID-19. Data were collected by the Connecticut Hospital Association. Starting on May 29, 2020, CHA changed to reporting only the number of patients with laboratory-confirmed COVID-19; data for previous dates include patients with laboratory-confirmed or suspected COVID-19. To date, **11699** patients have been hospitalized with laboratory-confirmed COVID-19 in Connecticut and **9408** patients hospitalized with laboratory-confirmed have been discharged.

Laboratory Surveillance

To date, DPH has received reports on a total of 1601944 COVID-19 laboratory tests; of these 1412254 test results were received via electronic laboratory reporting (ELR) methods from commercial laboratories, hospital laboratories, and the Dr. Katherine A. Kelley State Public Health Laboratory. The chart below shows the number of tests reported via ELR by date of specimen collection and test result.

Testing of specimens collected since September 27 is ongoing and does not reflect a decrease in testing. Chart only includes test results received by electronic laboratory reporting.

ELR = Electronic Laboratory Reporting

Characteristics of COVID-19 Cases and Associated Deaths

Counts may not add up to total case count because demographic data may be missing.

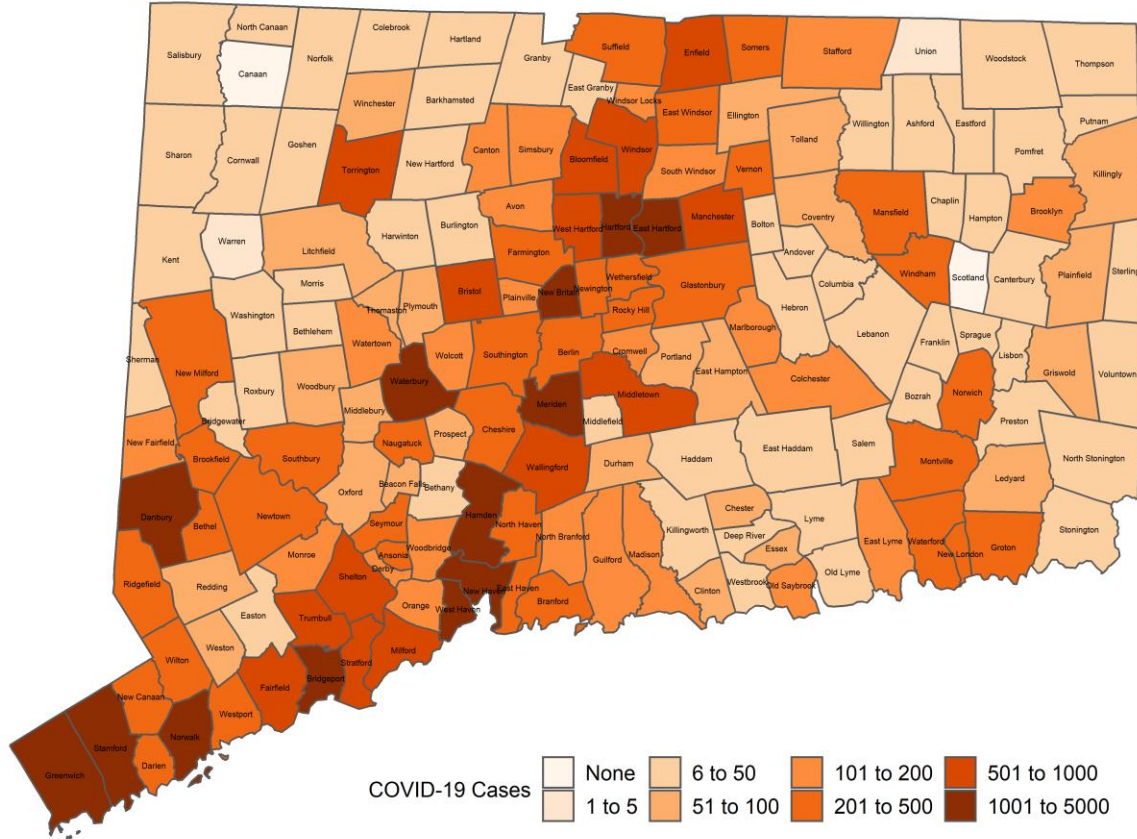

Counts may not add up to total case count because demographic data may be missing.

Cumulative Number of COVID-19 Cases by Town

Map does not include 125 cases pending address validation

All data are preliminary and subject to change. Updated 10/1/2020.

APPENDIX B. The following graphs show the number of cases per 100,000 Connecticut residents statewide and by county, age group, and gender. Population estimate from: [DPH Population Statistics](#)

Rate of COVID-19 Cases Statewide and by County

As of 09/30/2020 at 8:30pm

Rate of COVID-19-Associated Deaths Statewide and by County

As of 09/30/2020 at 8:30pm

Rate of COVID-19 Cases by Age Group

As of 09/30/2020 at 8:30pm

Rate of COVID-19-Associated Deaths by Age Group

As of 09/30/2020 at 8:30pm

Rate of COVID-19 Cases by Gender

As of 09/30/2020 at 8:30pm

Rate of COVID-19-Associated Deaths by Gender

As of 09/30/2020 at 8:30pm

APPENDIX C. The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

*Age adjusted rates only calculated for groups with at least 30 deaths
