

COVID-19 Update July 09, 2020

As of **July 08, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **47209**, including **45224** laboratory-confirmed and **1985** probable cases. **Ninety** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4348** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Probable cases of COVID-19 involve persons who have not had confirmatory laboratory testing (RT-PCR) performed for COVID-19, but whose symptoms indicate they are likely to have a COVID-19 infection. In Connecticut, most of the probable COVID-19 cases involve persons whose death certificates list COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Prior to June 1, probable and confirmed cases were reported together.

Overall Summary	Total**	Change Since Yesterday
COVID-19 Cases	47209	+101
COVID-19-Associated Deaths	4348	+5
Patients Currently Hospitalized with COVID-19	90	+2
COVID-19 PCR Tests Reported	543636	+8171

***Includes confirmed plus probable cases*

COVID-19 Cases and Associated Deaths by County of Residence

As of 07/08/20 8:30pm.

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	16245	641	1074	306
Hartford County	11185	681	1068	317
Litchfield County	1446	64	117	20
Middlesex County	1275	59	149	38
New Haven County	12119	390	929	150
New London County	1257	62	76	26
Tolland County	859	69	50	14
Windham County	622	8	13	1
<i>Pending address validation</i>	216	11	0	0
Total	45224	1985	3476	872

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week. All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

COVID-19 Cases and Deaths Over Time

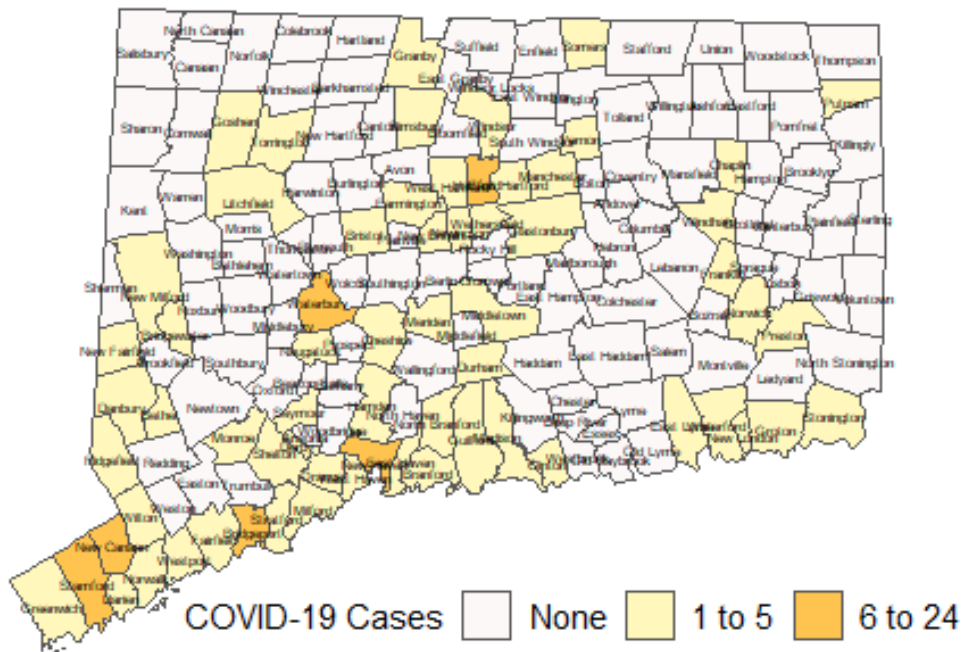

New Cases in the Past Week

Among 25,540 PCR tests for COVID-19 with specimen collection date in the past 7 days, 323 test results were positive. There were 221 people who tested positive for the first time or had onset of symptoms in the past 7 days. Of these 221 people, 213 (96%) cases were among people who reside in community settings and 8 (4%) were among people who reside in congregate settings, including nursing homes, assisted living facilities, or correctional facilities.

The maps below show the distribution of the 213 cases among people living in community settings. The first map shows the number of cases and darker colors indicate towns with more cases.

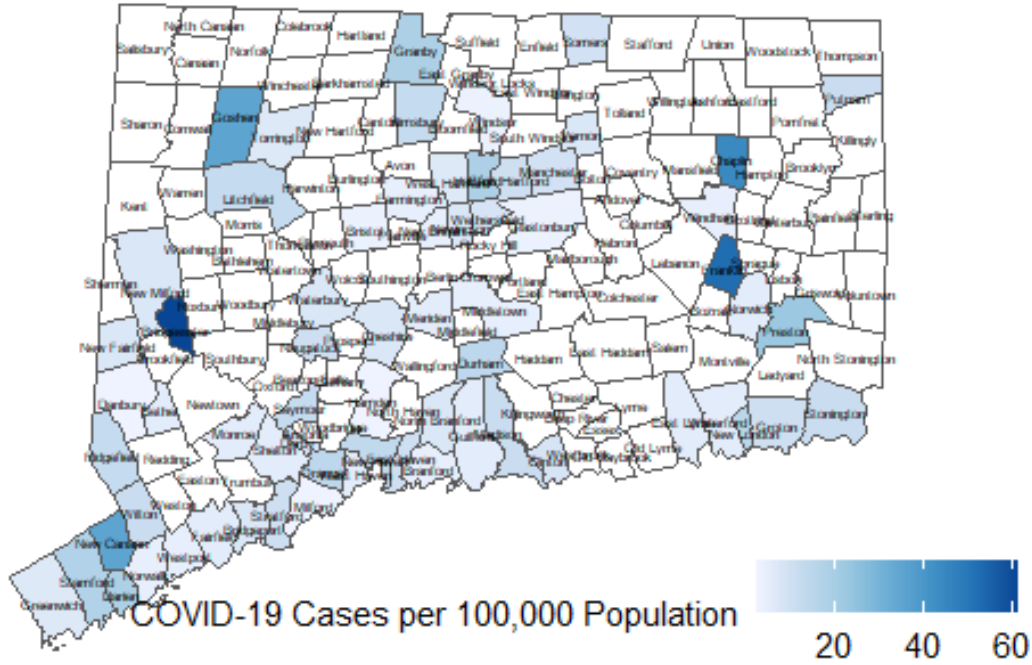

Because towns with larger populations are likely to have more cases, it is also important to look at the number of new cases per 100,000 population. The second map below shows the number of new cases per 100,000 population, with darker colors indicating higher rates.

Number of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date in the Past 7 Days

Map does not include 4 cases pending address validation

Rate of COVID-19 Cases among Persons Living in Community Settings per 100,000 Population by Town with Specimen Collection or Onset Date in the Past 7 Days

Map does not include 4 cases pending address validation

Population, Number and Rate of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date in the Past 7 Days

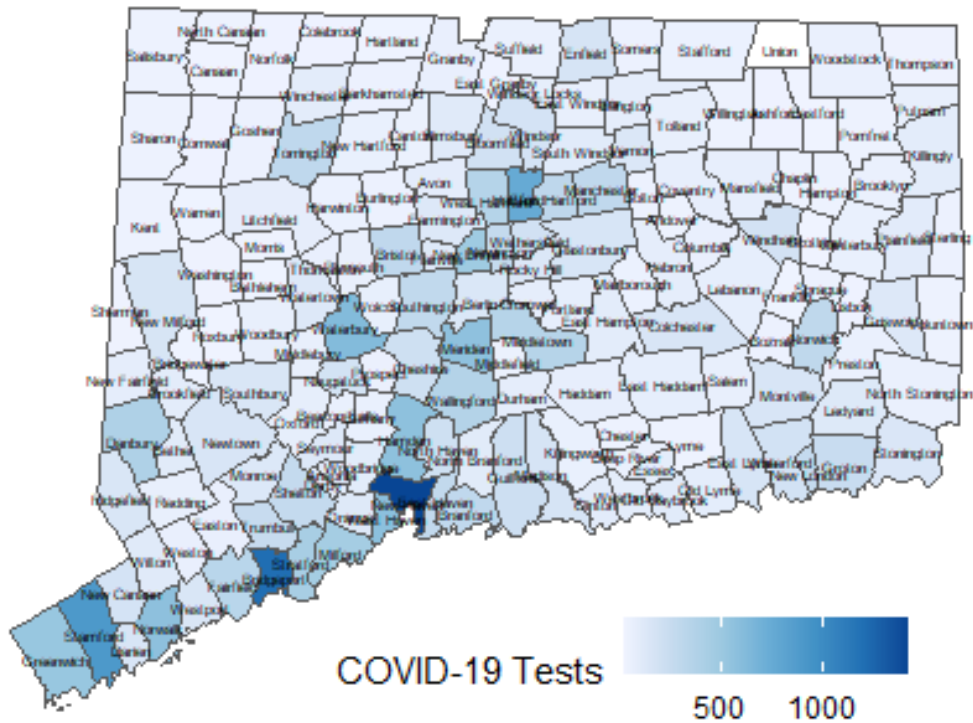

Table does not include 4 cases pending address validation. Rate is cases per 100,000 population.

COVID-19 PCR Tests in the Past Week

Among 25,540 PCR tests for COVID-19 with specimen collection date in the past 7 days, 23,890 (94%) tests were conducted among people who did not reside in congregate settings (including nursing homes, assisted living, and correctional facilities). Of the 23,890 tests, 304 (1%) were positive. The map below shows the number of PCR COVID-19 tests by town with specimen collection date in the past 7 days that were conducted among community members.

Number of PCR Tests for COVID-19 among Persons Living in Community Settings by Town with Specimen Collection Date in the Past 7 Days

Map does not include 858 tests pending address validation

Weekly Incidence by County

The chart below shows the number of new COVID-19 cases per week per 100,000 population in the state of Connecticut and for each Connecticut county. The rates in this chart are calculated by dividing the number of new cases diagnosed each week by the annual estimated population and then multiplying by 100,000. The rate calculation used here is consistent with the [CDC COVID-19 Data Tracker](#) method for calculation of cumulative COVID-19 incidence rates.

Notes:

Incidence rates are based on weekly cases divided by the estimated annual population and multiplied by 100,000. Cases pending address validation are excluded from rate calculations.

Cumulative COVID-19 Cases and COVID-19-Associated Deaths by Date

Test results may be reported several days after the result. Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.

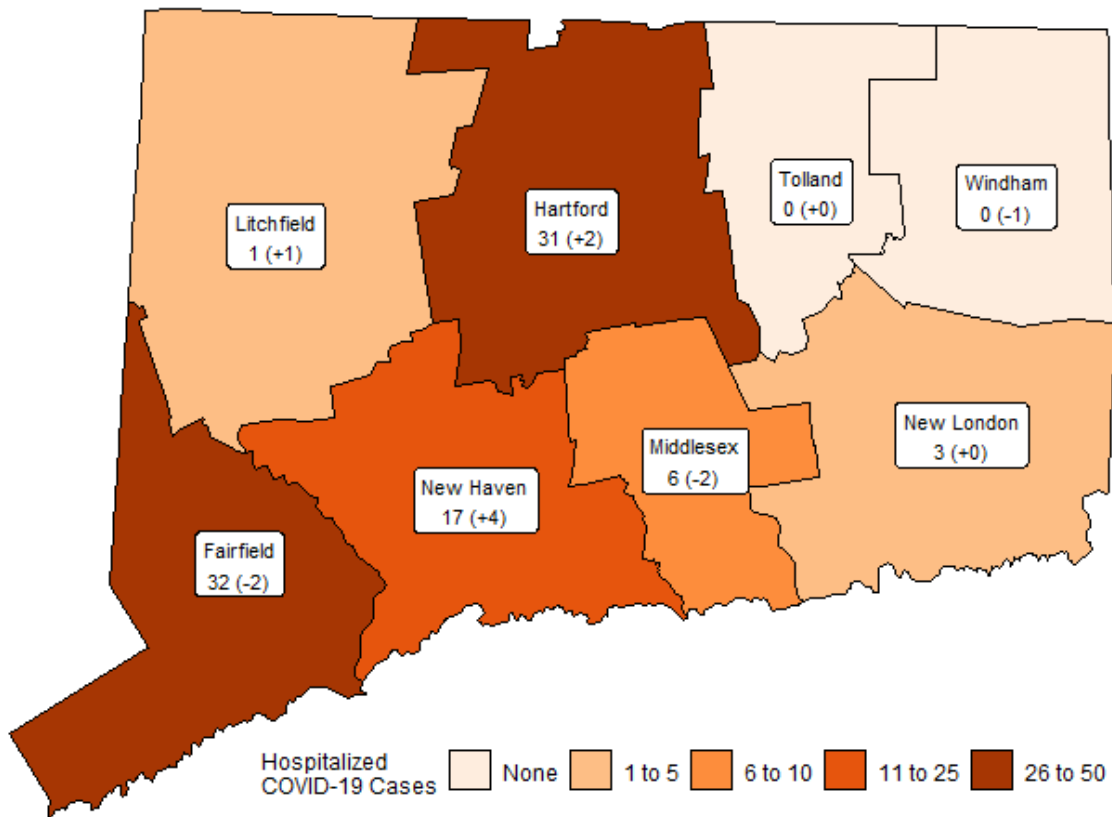

Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

Patients Currently Hospitalized by Connecticut County

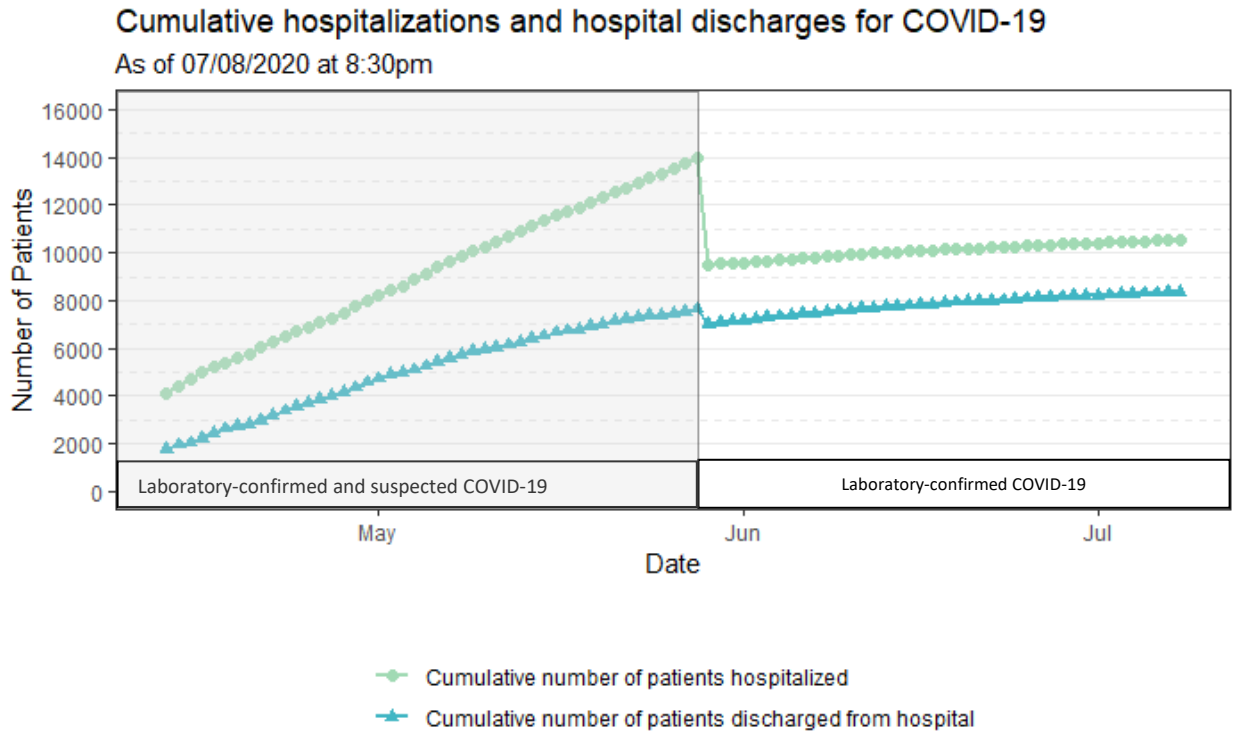

Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

Cumulative hospitalizations and cumulative hospital discharges for COVID-19

The chart below shows information on cumulative hospitalizations and hospital discharges for patients with COVID-19. Data were collected by the Connecticut Hospital Association. Starting on May 29, 2020, CHA changed to reporting only the number of patients with laboratory-confirmed COVID-19; data for previous dates include patients with laboratory-confirmed or suspected COVID-19. To date, **10552** patients have been hospitalized with laboratory-confirmed COVID-19 in Connecticut and **8351** patients hospitalized with laboratory-confirmed have been discharged.

Laboratory Surveillance

To date, DPH has received reports on a total of 543636 COVID-19 laboratory tests; of these 466949 test results were received via electronic laboratory reporting (ELR) methods from commercial laboratories, hospital laboratories, and the Dr. Katherine A. Kelley State Public Health Laboratory. The chart below shows the number of tests reported via ELR by date of specimen collection and test result.

Testing of specimens collected since July 5 is ongoing and does not reflect a decrease in testing. Chart only includes test results received by electronic laboratory reporting.

ELR = Electronic Laboratory Reporting

Characteristics of COVID-19 Cases and Associated Deaths

Counts may not add up to total case count because demographic data may be missing.

Counts may not add up to total case count because demographic data may be missing.

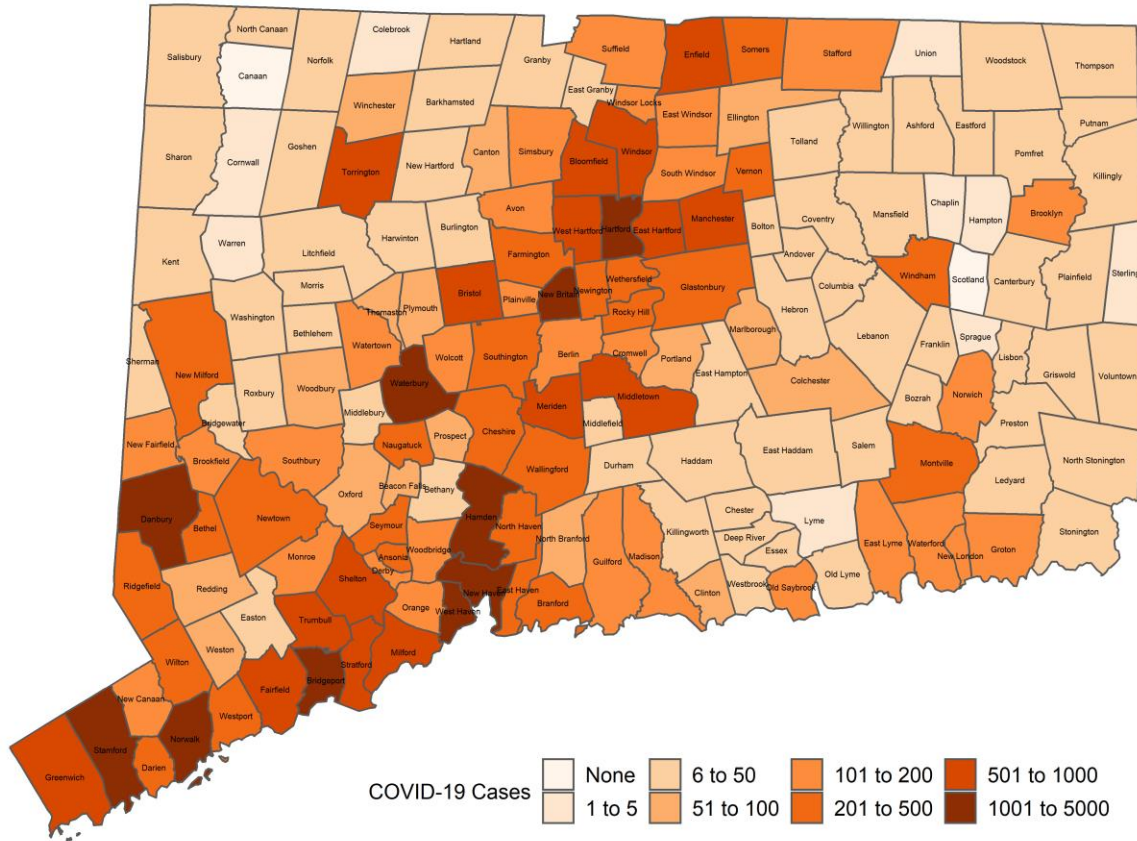

The graphs below show the number of COVID-19-associated deaths by date among people living in congregate settings, such as nursing homes, assisted living facilities, and prisons/jails (first graph) and among people who are not residents of congregate settings (second graph). *Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.*

Cumulative Number of COVID-19 Cases by Town

Map does not include 216 cases pending address validation

All data are preliminary and subject to change. Updated 7/9/2020.

APPENDIX B. The following graphs show the number of cases per 100,000 Connecticut residents statewide and by county, age group, and gender. Population estimate from: [DPH Population Statistics](#)

Rate of COVID-19 Cases Statewide and by County

As of 07/08/2020 at 8:30pm

Rate of COVID-19-Associated Deaths Statewide and by County

As of 07/08/2020 at 8:30pm

Rate of COVID-19 Cases by Age Group

As of 07/08/2020 at 8:30pm

Rate of COVID-19-Associated Deaths by Age Group

As of 07/08/2020 at 8:30pm

Rate of COVID-19 Cases by Gender

As of 07/08/2020 at 8:30pm

Rate of COVID-19-Associated Deaths by Gender

As of 07/08/2020 at 8:30pm

APPENDIX C. The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

*Age adjusted rates only calculated for groups with at least 30 deaths
