What You Should Know

Get the Facts about COVID-19

Current Situation in Hawaii

There have been 319 cases of COVID-19 identified in Hawaii. Of those cases, 6% have required hospitalization, and over 80% were residents returning from other areas.

Update: COVID-19 is spreading globally, nationally, and now locally. While the majority of cases identified in Hawaii have been introduced into our state by travelers, especially Hawaii residents, we all need to practice social distancing (i.e., maintaining at least 6 ft distance or 2 arm's length from others) as well as other important infection prevention measures (e.g., wash hands, clean surfaces regularly) to prevent widespread community transmission. Social distancing *can* reduce the spread of disease, prevent our healthcare system from being overburdened, and protect the most vulnerable members in our community from infection. [If you get sick, please stay home](#)—get rest and drink plenty of fluids. If you are older or have an underlying medical condition and become ill, call your doctor.

Novel Coronavirus in Hawaii		
COVID-19 Positive* Cases		
Cumulative totals as of 12:00 noon on April 3, 2020		
	Newly Reported	Total
Statewide		
Total Cases	34	319

*includes presumptive and confirmed cases, data are preliminary and subject to change; note that CDC provides case counts according to states of residence.		
†The sum of changes in county "Change from X/X/X" may be larger than the number of statewide newly reported cases because of previously reported pending cases being reclassified to county totals as more information is collected.		
††Isolation should be maintained until at least 3 days (72 hours) after resolution of fever and myalgia without the use of antipyretics OR at least 7 days have passed since symptom onset, whichever is longer.		

Hawaii COVID-19 Epi Curve

(Updated daily by 12:00 noon)

Confirmed COVID-19 Cases by Residence and Exposure—Hawaii, 2020 (N=242)

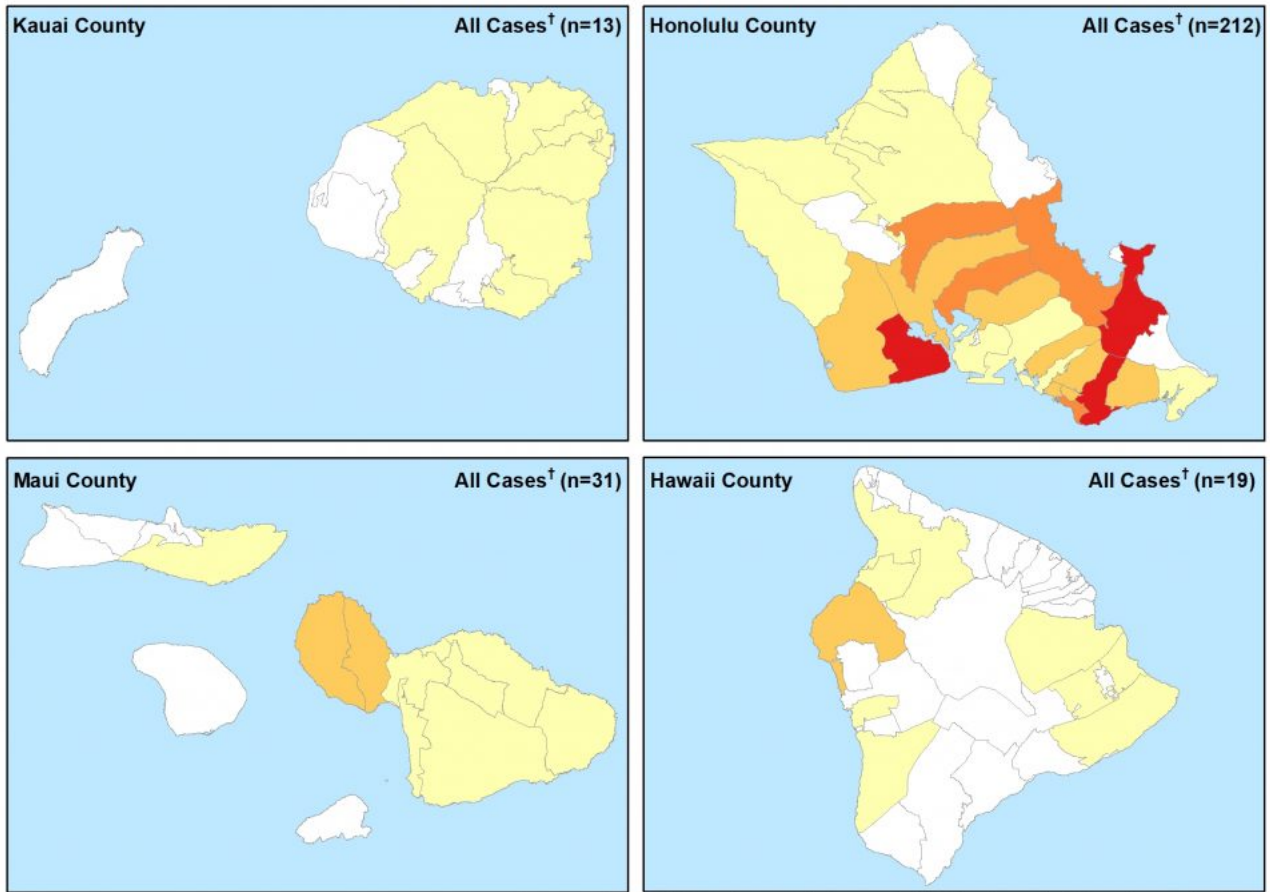

Data as of April 2, 2020. All cases to date may not be included because of missing or pending data.

Hawaii COVID-19 Map

(Updated daily by 12:00 noon) – As the number of cases increase, the number of cases represented by each color may change. Please check the map legend for the current map's breakdown.

Coronavirus Disease 2019 (COVID-19) Confirmed Cases by ZIP Code Tabulation Area (ZCTA)* (N=275)

* Data as of April 2, 2020. Data are preliminary and subject to change. Includes all cases for which location data are available. Case location based on ZCTA of case residence or location stayed while in Hawaii
 †Does not imply that risk of transmission is isolated to these ZCTAs

The Hawaii Department of Health (HDOH) is **urging all residents to act now to prevent the spread of COVID-19 in our communities (see [What You Can Do](#))**.

HDOH is expanding existing statewide influenza surveillance to include testing for COVID-19 to identify cases of community spread of the new coronavirus. For 263 sentinel surveillance specimens collected between 3/1 and 3/20, all cases were negative for COVID-19 (0% positive). For more information see: [COVID-19 Sentinel Surveillance](#).

Screening is being conducted at Daniel K. Inouye International Airport (HNL) by local and federal authorities to identify travelers that require quarantine.

Anyone arriving in Hawaii is being placed under [mandatory quarantine](#) and must stay home and monitor their health for 14 days from the time they arrived.
