What You Should Know

Get the Facts about COVID-19

Current Situation in Hawaii

There have been 387 cases of COVID-19 identified in Hawaii. Of those cases, 7% have required hospitalization, and over 80% were residents returning from other areas.

Update: COVID-19 is spreading globally, nationally, and now locally. While the majority of cases identified in Hawaii have been introduced into our state by travelers, especially Hawaii residents, we all need to practice social distancing (i.e., maintaining at least 6 ft distance or 2 arm's length from others) as well as other important infection prevention measures (e.g., wash hands, clean surfaces regularly) to prevent widespread community transmission. Social distancing *can* reduce the spread of disease, prevent our healthcare system from being overburdened, and protect the most vulnerable members in our community from infection. [If you get sick, please stay home](#)—get rest and drink plenty of fluids. If you are older or have an underlying medical condition and become ill, call your doctor.
