Updated July 5, 2020
Updated daily at 11 a.m., with data current as of 4 p.m. the previous day.

In observance of the Fourth of July holiday, we did not update the data on this page on Saturday, July 4. As we resume daily posting, here are some key points:

The daily update section will include newly reported cases from July 3 and 4.

Deaths are counted on the day we report them out which will mean no deaths will be reported for July 4.

Hospitalization/ICU data will not be reported for July 4.

Data is for cases that were tested and returned positive. All data is preliminary and may change as cases are investigated. Many data points are collected during case interviews. Data presented below is for all cases, regardless of interview status. Data for cases pending interview may be listed as "unknown/missing."

Not all suspected cases of COVID-19 are tested, so this data is not representative of the total number of people in Minnesota who have or had COVID-19. Cumulative numbers are since Jan. 20, 2020.

Daily Update:

Because all data is preliminary, the change in number of cumulative positive cases and deaths from one day to the next may not equal the newly reported cases or deaths.

Data includes counts from July 3 and July 4.

38,136
Total positive cases (cumulative)
