Updated July 20, 2020
Updated daily at 11 a.m., with data current as of 4 p.m. the previous day.

Data is for cases that were tested and returned positive. All data is preliminary and may change as cases are investigated. Many data points are collected during case interviews. Data presented below is for all cases, regardless of interview status. Data for cases pending interview may be listed as "unknown/missing."

Not all suspected cases of COVID-19 are tested, so this data is not representative of the total number of people in Minnesota who have or had COVID-19. Cumulative numbers are since Jan. 20, 2020.

Daily Update:

On 7/19 we transitioned data management systems for COVID-19 surveillance data. This updated system is better able to deal with the high volume of data we are collecting. During this transition we had limited capacity to complete investigations. In turn, numbers posted on 7/20 for missing and unknown are higher than normal. This data will be updated as case investigations continue.

Because all data is preliminary, the change in number of cumulative positive cases and deaths from one day to the next may not equal the newly reported cases or deaths.
