ATTENTION: All test results must be reviewed by a physician or submitting organization. Patients with a positive test be advised by phone or in person. It is the responsibility of the provider in notifying the patient and

to the ordering physician regarding the status of the pending investigation, which results

Current Situation

COVID-19 is a virus identified as the cause of an outbreak of respiratory illness first detected in Wuhan City, Hubei Province, China in 2019 and has since spread globally into a pandemic. Symptoms of COVID-19 include fever, cough, and shortness of breath. While roughly 80% of cases report mild symptoms, some progress into severe pneumonia and multi-organ failure and can lead to death. Current data indicates the risk of death for those contracting COVID-19 notably increases for individuals above the age of 60 or for individuals with autoimmune conditions. On January 11, 2020, the first set of individuals in the United States tested positive for COVID-19. The virus has since spread across all 50 states and the number of individuals testing positive for COVID-19 continues to rapidly grow each day.

Response

The Oklahoma public health system has activated the Incident Command System and stands ready with a multitude of statewide and national partners to treat and minimize further spread. Public health officials will continue to work with health care providers and medical facilities to ensure proper assessment, testing and treatment protocols. State and local public health officials will continue to monitor travelers and any individuals who test positive for COVID-19.

Latest News

SITUATION UPDATE: COVID-19 03/21/2020

Saturday, March 21, 2020

- As of this advisory, there are 53 positive cases of COVID-19 in Oklahoma. Results are beginning to come in from the public-private partnership with Diagnostic Laboratory of Oklahoma (DLO), who took on an additional 300 tests for the state.
