NOVEL CORONAVIRUS (COVID-19) UPDATES AND INFORMATION

[COVID-19 in South Dakota](#) | [Community Impact Map](#) | [News](#)
[Precautions to Avoid Illness](#) | [If You Develop Symptoms](#)
[Community Guidance and Resources](#)
[Information for Medical Providers](#) | [SD Guidance for Healthcare Providers](#)
[CDC Guidance for Healthcare Providers](#) | [CDC Website](#)

The South Dakota Department of Health (SD-DOH) continues to respond to the emergence of the novel coronavirus. We are working with the CDC and our healthcare partners across the state to protect South Dakotans from COVID-19.

Updates include:

- Cases have been identified in South Dakota.
- The number of cases and countries with infections worldwide is increasing and can be found on the [WHO website](#).
- Case counts and other information about the novel coronavirus can be found on the [CDC website](#).
- Travelers returning from High Risk Countries ([See CDC Travel Advisories](#)) should self-monitor for 14 days for novel coronavirus symptoms (e.g., fever, cough, or shortness of breath) and call their medical provider to discuss their symptoms.

COVID-19 IN SOUTH DAKOTA

On March 4, 2020, CDC updated the clinical criteria for testing a symptomatic individual after evaluation by their healthcare provider. As a result, the South Dakota Department of Health (SD-DOH) expects the number of persons under investigation (PUI) being tested for COVID-19 to increase.

The number of PUI being tested does not reflect the level of risk to the public in the state. For more information about the outbreak, potential risks, and protective recommendations, visit the [SD-DOH website](#) or [CDC website](#).

This table shows the total number of positive COVID-19 cases in South Dakota residents, the total number of persons that tested negative, and

the total number of PUIs that are pending results.

As of March 16, 2020

Positive*	10
Negative	494
Pending	0

**Positive test results are no longer required to be sent to the CDC for confirmation*

COVID-19 in South Dakota

Number of Cases	10
------------------------	----

South Dakota Counties with COVID-19 Cases

Beadle	1
Bon Homme	1
Charles Mix	1
Davison	1
McCook	1
Minnehaha	4
Pennington	1

Note: All cases had travel history outside South Dakota prior to illness onset. There is no community transmission at this time.

Age Group of South Dakota COVID-19 Cases

0 to 19 years	0
20 to 29 years	1
30 to 39 years	2
40 to 49 years	3
50 to 59 years	2
60 to 69 years	2
70 to 79 years	0
80+ years	0

Sex of South Dakota COVID-19 Cases

Male	9
Female	1

These tables will be updated every day

COMMUNITY IMPACT MAP

Everyone has a role to play to get ready, stay healthy, and protect yourself, your family, and your community from COVID-19. The goal is to slow the spread of COVID-19 to reduce illness and death, while minimizing disruptions to daily life.

What does “community mitigation” mean?

Any actions that individuals, schools, businesses, and health care facilities take to slow the spread of the infection.

CDC has developed steps that can be taken based on the level of COVID-19 spread in the community. As more COVID-19 is spread in a community, additional preventive steps can be taken. Community spread is defined as three levels:

- **None:** COVID-19 cases may occur in the community, but there is NO community transmission.
- **Minimal to Moderate:** There is a single case of community-acquired COVID-19 in a county.
- **Substantial:** There are five or more cases of community-acquired COVID-19 in a county.

PRECAUTIONS TO AVOID ILLNESS

What can you do?

- Wash your hands often with soap and water for at least 20 seconds or use an alcohol-based hand sanitizer.
- Cover your coughs and sneezes with a tissue.
- Avoid close contact with people who are sick.
- Refraining from touching your eyes, nose and mouth.
- Clean frequently touched surfaces and objects.
- Individuals at higher risk for severe COVID-19 illness, such as older adults and people who have chronic medical conditions like heart, lung or kidney disease, should [take actions](#) to reduce your risk of exposure.
- Create a family [plan](#) to prepare for COVID-19 and develop a [stay at home kit](#) with food, water, medication, and other necessary items.

WHAT TO DO IF YOU DEVELOP SYMPTOMS

If you develop symptoms:

- Call your health care provider immediately and tell them about any recent travel or exposure.
- Individuals who are concerned that they have COVID-19 should contact their healthcare provider via phone before going to a clinic or hospital to prevent spread in healthcare facilities.
- Avoid contact with other people.
- Follow the directions of your provider and public health officials.

Find Federally Qualified Health Centers in South Dakota

CDC does not recommend that people who are well wear a facemask to protect themselves from respiratory illnesses, including COVID-19. You should only wear a mask if a healthcare professional recommends it. A facemask should be used by people who have COVID-19 and are showing symptoms. This is to protect others from the risk of getting infected. The use of facemasks also is crucial for [health workers](#) and other [people who are taking care of someone infected with COVID-19 in close settings](#) (at home or in a health care facility).

INFORMATION FOR MEDICAL PROVIDERS

- Medical providers who are concerned a patient may be infected with COVID-19 should:
 - Mask the patient
 - Isolate the Patient in a private room or separate area, and
 - Contact with SD-DOH (800-592-1861) immediately for consultation and guidance
- Clinicians are strongly encouraged to test for other infectious causes of respiratory illness, such as influenza and RSV. **Note:** Asymptomatic patients are **not eligible** for testing at the SD Public Health Laboratory.

Priority Level	Clinical Features	Risk Exposure*
Low	Fever OR Cough OR Shortness of Breath	None identified
Medium	Fever OR Cough OR Shortness of breath AND Elevated risk for severe infection**	None identified
Medium	Fever OR Cough OR Shortness of Breath	Identified risk
High	Fever OR Cough OR Sore Throat OR Shortness of Breath	Identified healthcare risk***
High	Fever AND Cough OR Shortness of Breath	Identified risk

*Individual meets the risk exposure criterion if they have one of the following:

- Close contact to a laboratory-confirmed case within 14 days of symptom onset.
- History of travel to a geographic area with community transmission in a state within 14 days of symptom onset. [Visit CDC website for the current list of states.](#)
- History of travel from a country under a Level 2 or Level 3 Travel Advisory. [Visit CDC website for the current list of countries.](#)

**Elevated Risk for Severe COVID-19 Infection:

- Hospitalized patients

- Older adults (65 years of age and older)
- Individuals with certain pre-existing conditions (e.g., heart disease, lung disease, diabetes, and immunosuppressed)

***Any healthcare worker who was caring for or who had unprotected direct contact with infectious secretions or excretions of a suspected COVID-19 patient or laboratory-confirmed case within 14 days of symptoms onset.
