Probable test results are pending confirmation at the Washington State Public Health Lab

March 13, 2020 – 4:50pm

Grant County Now Has Two Confirmed Cases of COVID-19

An additional probable case is under investigation. GCHD was notified today of a second positive test result of COVID-19 in our county. The second patient, a male Quincy resident in his 60's, has been linked to the first patient from Quincy. This individual has not experienced severe illness and is in isolation.

Additionally, a third patient, who has not been linked to the other cases, is under investigation as a "probable" case in south Grant County. This patient, a male in his 40's, did have foreign travel prior to his illness. He is currently hospitalized. More details on this case will be released if confirmed.

Staff are working overtime to identify and call all those who had close contact with these two individuals to ensure proper quarantines are in place and prevent others from being infected. However, we expect additional cases will be confirmed in our communities.

GCHD completely supports President Trump's Declaration of National Emergency for this outbreak response and Governor Inslee's Executive Order for social distancing, including school closures and banning of large gatherings. A comprehensive national strategy is necessary to shut this pandemic down.

"Anyone staying home from work when sick or telecommuting, cancelling events or modifying business operations to minimize the spread of this virus is doing their civic duty and should be commended by the rest of us. The only way we will stop this pandemic is by separating ourselves from each other and by following simple hygiene and cough etiquette techniques" states Dr. Brzezny, Grant County Health Officer.

We are urging the public to do their part to help minimize the spread of COVID-19 by doing the following:

High Risk People: People at higher risk of severe illness should stay home and away from large groups of people as much as possible, including public places with a lot of people and large gatherings where there will be close contact with others. People at higher risk include:

- People 60 and older
- People with underlying health conditions including heart disease, respiratory illness and diabetes
- People who have weakened immune systems

- People who are pregnant

Workplace: Workplaces should enact measures that allow people who can work from home to do so. Taking these measures can help reduce the number of workers who come into contact with COVID-19 and help minimize absenteeism due to illness.

Employers should consider continued compensation when possible, along with all other measures to sustain those temporarily laid off. We urge all community groups – including social service organizations, faith-based organizations, schools and PTOs, and others – to take the initiative right now to organize efforts to sustain high risk and laid-off people with whom you are associated, with food and household supplies.

Financial institutions should implement all possible policies easing debt, mortgage deadlines, and related obligations for the duration of this pandemic

Events: If you can feasibly avoid bringing groups of 20 or more people together, consider postponing events and gatherings. This recommendation is for both private and public events. Gatherings of 250 people or more are prohibited for the time being under the Governor's Executive Order.

If you can't avoid bringing groups of people together:

- Urge anyone who is sick to not attend.
- Encourage those who are at higher risk for coronavirus to not attend.
- Try to find ways to give people more physical space so that they aren't in close contact as much as possible.
- Encourage attendees to maintain good healthy habits, such as frequent hand washing.
- Clean surfaces frequently. Standard cleaning products are effective against COVID-19.

Ticketholders of fundraising events that have been cancelled due to COVID-19, please consider donation of the cost of your ticket, as opposed to requesting a refund, as many non-profit organizations rely on these funds for charitable causes.

Schools: GCHD supports the Governor's executive order to close schools.

Healthcare and Long-Term Care (Nursing homes): Generally, avoid medical settings unless necessary. Healthcare facilities are overwhelmed. If you are feeling sick call your doctor's office first before going in.

Even if you are not ill, avoid visiting hospitals, long term care facilities or nursing homes to the extent possible. If you do need to visit one of these facilities limit your time there and keep 6 feet away from other patients.

Do not go to the emergency room unless essential. Emergency rooms need to be able to serve those with the most critical needs. If you have symptoms like cough, fever, or other respiratory problems, contact your regular doctor first.

Everybody Can Do Something! Every person can make a difference by doing the following:

- Avoid going out if you feel sick.
- Wash hands often and vigorously with soap and water for at least 20 seconds. If soap and water is not available, use a hand sanitizer with at least 60% alcohol, saturating the skin surface and rubbing for at least 20 seconds.

- Avoid touching your eyes, nose or mouth with unwashed hands.
- Avoid contact with people who are sick.
- Stay home when you are sick and avoid close contact (less than 6 feet away) with others.
- If you have a cold or cough and need to see a provider, always call first to be sure they know you are coming so their staff can take appropriate precautions.
- Cover your mouth and nose with a tissue or sleeve when coughing or sneezing.
- Don't shake hands, bump elbows.
- Use sanitizing wipes or solutions (normal household products work) on frequently touched surfaces and objects at home and at work.
- Take good care of yourself to stay healthy, including adequate sleep and good nutrition.

"We would like to thank all of our staff, healthcare partners, Grant County Sheriff's Emergency Management Division, volunteers, and the community for your amazing cooperation. I know you are having to make tough choices that are impacting your way of life. We are all in this together and it takes a dedicated team like you to slow the spread of this virus in our community," Theresa Adkinson GCHD Administrator.

March 12, 2020 – 12:30 pm

In response to the Governor's Proclamation to minimize COVID-19 (Coronavirus) exposure in King, Snohomish and Pierce Counties, GCHD staff worked with colleagues at Chelan-Douglas Health District and Okanogan Public Health to create a joint message regarding public health interventions to minimize exposure to COVID-19 for the residents of North Central Washington and to lessen the impact of the outbreak on our communities. As of today, there have been a total of six (6) cases of COVID-19 reported in Eastern WA—one in Grant County, three in Kittitas County and two in Yakima County. See below or click [here](#) for the full document.

Joint Public Health Recommendations for COVID-19

Grant County Health District, Chelan-Douglas Health District & Okanogan Public Health –
March 12, 2020

On March 11, 2020, Governor Inslee issued a Proclamation to minimize COVID-19 (Coronavirus) exposure, particularly in counties hit hardest by the virus. Starting March 11, 2020, *events that take place in King, Snohomish, and Pierce counties with more than 250 people are prohibited by the state.* This order applies to gathering for social, spiritual, and recreational activities. This includes but is not limited to: community, civic, public, leisure, faith-based, or sporting events; parades; concerts; festivals; conventions; fundraisers and similar

activities.

“This is an unprecedented public health situation and we can’t wait until we’re in the middle of it to slow it down. We’ve got to get ahead of the curve. One main defense is to reduce the interaction of people in our lives.” – Governor Inslee

Currently, COVID-19 has been confirmed in 13 counties in Washington, including three eastern Washington counties—Grant, Kittitas and Yakima—and has resulted in 29 deaths statewide. There is confirmed significant community spread in King, Pierce, and Snohomish counties.

North Central Washington

Chelan-Douglas Health District, Grant County Health District, and Okanogan County Public Health are urging and recommending residents of our counties **voluntarily follow Governor Inslee’s proclamation and reduce large gatherings**. The Health Districts are firmly recommending this proactive step to minimize exposure to COVID-19 for our residents and to lessen the impact it has on our communities.

We recognize and understand the substantial impact these actions can have on our residents and communities. We have carefully weighed the risks and benefits of this recommendation. These actions are the most effective tools we have available to help slow the spread of the virus in our communities and protect our vulnerable residents.

Alternatives

If you are hosting an event or gathering, please consider the following alternatives:

- Utilize available technology options (e.g. livestreaming, virtual meetings), or
- Cancel or postpone the event until these recommendations have been lifted

If you have plans to attend an upcoming event or gathering, we encourage you not attend to protect yourself, your family, and the people you come in contact with on a daily basis.

Large events and gatherings

While we are recommending eliminating events on more than 250 people, all gatherings of people can pose risks. Any size gathering should ensure the following:

- Older adults and individuals with chronic medical conditions are encouraged not to attend
- Recommendations for social distancing and limiting close contact are met
- Employees or volunteers leading an event are screened for symptoms each day
- Proper hand washing, sanitation, and cleaning is readily available
- Environmental cleaning guidelines are followed (e.g., clean and disinfect high touch surfaces daily or more frequently)

Preventing the Spread of COVID-19

Remember to take every day preventative action to slow the spread of COVID-19.

1. Wash your hands frequently with soap and water; if unavailable, use hand sanitizer with at least 60% alcohol

2. Cover your mouth and nose with a tissue or sleeve when coughing or sneezing
3. Avoid large gatherings and close contact (less than 6 feet away) with others
4. Frequently clean and disinfect objects and surfaces
5. Stay home and away from others if you are sick

Schools

At this point, we are not recommending closing schools, but we are watching the outbreak closely and may determine that school closures are necessary. **Schools should take steps now to prepare for the possibility of prolonged mandatory closures.**

In particular, schools should plan for how to continue to provide non-educational supports for their students such as providing food, developmental disability supports, and school-based healthcare.

Collective action can save lives

We all have people in our lives who are high-risk. We all are one mishap away from needing access to a functioning hospital. We all have a lot at stake.

Giving up social events will not be easy, and the impacts on businesses and jobs may be significant. But this is our best chance to save lives. It is in support of the most vulnerable in our community, and a protection for everyone.

The more united we can be in preventing the spread – be in this together – the greater the benefit for the whole community.

March 10, 2020 – 6 pm

We are continuing to respond to the evolving coronavirus situation.

Case Numbers: There is still only one (1) confirmed case of COVID-19 in Grant County as of today. A table of updated case numbers is now on our [website](#) and will be updated as information is received. We also updated the gender information of our case and will continue to report gender and age range of confirmed cases in the future.

Test Numbers: COVID-19 testing has become much more readily available to our residents, which we are very thrilled about. Several private labs are now offering the test and healthcare providers can work directly with those labs to submit specimens. Because of this, we are not aware of every test being submitted, and therefore, are no longer able to report the number of people being tested. However, we are keeping in close communication with healthcare providers to ensure they have the most current guidance on testing, treating, quarantining, isolating, etc. We will be updating the table above as results are reported to us.

Long-Term Care Facilities: Among many other things, GCHD staff worked diligently today with owners and managers of long-term care and assisted living facilities, nursing homes, adult-family homes and senior centers to provide them with guidance and support they need to prepare and be proactive in protecting residents of their facilities from this virus. Governor Jay Inslee announced [new rules](#) today around nursing homes and assisted living facilities that focus on better protecting older adults – a population more likely to be hit by COVID-19 (coronavirus). These facilities are being urged to limit visitors, cancel or postpone activities and

institute active monitoring of symptoms in their residents. Our thoughts are with the families and staff of the long-term care facilities affected by this outbreak on the west side of the state, as well as our public health colleagues responding to this outbreak from King and Snohomish counties.

March 9, 2020 – 6:30pm

FAQ: Why aren't you closing schools?

Currently there is not widespread community presence of COVID-19 in Grant County. Most information about school closures come from influenza outbreaks; this is a different virus. In general, school closures are not recommended now because current evidence indicates young people have a far lower risk of serious illness from this virus than other people AND children out of school often congregate in multiple locations in the community, potentially getting exposed or passing the virus. When schools do close, often caregivers for dismissed children are elderly (i.e. grandparents) which could increase the risk of spread to that high-risk group. School closures have other impacts on working parents, and parent healthcare workers may not be able to come work as a result. It also affects vulnerable children who rely on school meal programs. Overall, school closures can be disruptive and costly for families. The exact timing of school closures is also uncertain. School closures for viral illness are most effective when they last for longer than 4 weeks and when community spread is increasing. If schools are closed too early, it may not be an effective strategy to reduce infections. Even with the best timing, school closures for COVID-19 may have only modest effect in rural communities.

We consider both the potential benefits and negative consequences of closures when we make recommendations. Working with the WA Department of Health, CDC, and statewide Health Officers, we are assessing the need for school closures weekly. As we learn more about this virus and as the situation in our county changes, it may still become our recommendation to close schools.

Caregivers of children with underlying health conditions should consult with healthcare providers about whether their children should stay home, especially when the virus presence is increasing.

March 9, 2020 – 3:00pm

We received feedback and questions regarding a statement in our recent media release comparing coronavirus (COVID-19) to seasonal flu (influenza), in terms of how “deadly” it is. To clarify, that statement was referring to the “mortality rate” of coronavirus. Mortality rate means, how many of those patients with confirmed COVID-19 died of the virus. Doctors and scientists are working on estimating the mortality rate of COVID-19, but at present, it is thought to be higher (between 2% to 4%) than that of most strains of the flu. Each year, seasonal influenza affects millions of Americans and kills hundreds of thousands, however, the average mortality rate is around 0.1%. So yes, influenza affects MANY more people than coronavirus has, but currently, the mortality rate of influenza is much lower than coronavirus.

March 9, 2020 – 2:50pm

Returning Travelers Advisory:

Travelers who have recently returned from countries with widespread, ongoing community spread of COVID-19 (“Level 3 Travel Notice” countries)—currently China, South Korea, Iran and Italy—are advised to stay home for 14 days and monitor for symptoms of COVID-19 (fever, cough, trouble breathing).

March 8, 2020 – 4:00PM

First Grant County Resident Death from Coronavirus (COVID-19)

GRANT COUNTY, WA – Grant County Health District (GCHD) has received notice that the patient with confirmed COVID-19, previously reported, has sadly passed away. GCHD has and will continue to follow up with close contacts of this patient.

“I will start this press release by stating our hearts are with the family, friends, and Central Washington Hospital staff,” states Theresa Adkinson, Health District Administrator. “I speak on behalf of our staff, Health Officer, and Board of Health, we are so sorry for your loss.” “Please heed our advice and review the remainder of this press release and the important information we need you to follow.”

We know that COVID-19 (novel coronavirus) is in our communities, and likely above the number of cases we already know. Most cases of COVID-19 are mild to moderate and most people who get this virus will recover and be just fine, however, it does have a higher death rate than seasonal flu. The elderly, anyone with reduced immune system, or other serious health problems such as diabetes and heart disease will be at a higher risk of more severe illness.

There are many conversations in the community and on social media regarding whether this is serious. Yes, many of our residents will recover quickly with mild to moderate symptoms. However, we all need to take precautions to protect our most vulnerable populations and slow this disease. This illness can be fatal. Please heed our advice.

GCHD is asking that the public do their part to help reduce the spread of COVID-19 by doing the following:

High Risk People: People at higher risk of severe illness should stay home and away from large groups of people as much as possible, including public places with a lot of people and large gatherings where there will be close contact with others. People at higher risk include:

- People 60 and older
- People with underlying health conditions including heart disease, respiratory illness and diabetes
- People who have weakened immune systems
- People who are pregnant

Workplace: Workplaces should enact measures that allow people who can work from home to do so. Taking these measures can help reduce the number of workers who come into contact with COVID-19 and help minimize absenteeism due to illness.

Events: If you can feasibly avoid bringing large groups of people together, consider postponing events and gatherings. This recommendation is for both private and public events.

If you can't avoid bringing groups of people together:

- Urge anyone who is sick to not attend.
- Encourage those who are at higher risk for coronavirus to not attend.
- Try to find ways to give people more physical space so that they aren't in close contact as much as possible.
- Encourage attendees to maintain good healthy habits, such as frequent hand washing.
- Clean surfaces frequently. Standard cleaning products are effective against COVID-19.

Schools: GCHD is not recommending closing schools and childcare at this time. If there is a confirmed case of COVID-19, GCHD will work with the school or facility to determine the best measures including potential closure. Closure is not recommended now mainly because current evidence indicates young people have a far lower risk of serious illness from this virus than other people and children out of school often congregate to multiple locations in the community, potentially getting exposed or passing the virus. Parents of children with reduced immune system or with chronic diseases should discuss with their provider the possibility of keeping the child out of school or childcare.

Healthcare and Long-Term Care (Nursing homes): Generally, avoid medical settings unless necessary. Healthcare facilities are overwhelmed. If you are feeling sick call your doctor's office first before going in.

Even if you are not ill, avoid visiting hospitals, long term care facilities or nursing homes to the extent possible. If you do need to visit one of these facilities limit your time there and keep 6 feet away from other patients.

Do not go to the emergency room unless essential. Emergency rooms need to be able to serve those with the most critical needs. If you have symptoms like cough, fever, or other respiratory problems, contact your regular doctor first.

Everybody Can Do Something! Every person can make a difference by doing the following:

- Avoid going out if you feel sick.
- Wash hands often and vigorously with soap and water for at least 20 seconds. If soap and water is not available, use a hand sanitizer with at least 60% alcohol, saturating the skin surface and rubbing for at least 20 seconds.
- Avoid touching your eyes, nose or mouth with unwashed hands.
- Avoid contact with people who are sick.
- Stay home when you are sick and avoid close contact (less than 6 feet away) with others.
- If you have a cold or cough and need to see a provider, always call first to be sure they know you are coming so their staff can take appropriate precautions.
- Cover your mouth and nose with a tissue or sleeve when coughing or sneezing.
- Don't shake hands, bump elbows.

- Use sanitizing wipes or solutions (normal household products work) on frequently touched surfaces and objects at home and at work.
- Take good care of yourself to stay healthy, including adequate sleep and good nutrition.

We would like to thank all of our staff, healthcare partners, Grant County Sheriff's Emergency Management Division, volunteers, and the community for your amazing cooperation. We are all in this together and it takes a dedicated team like you to slow the spread of this virus in our community.
