2019 Novel Coronavirus (COVID-19) in Whatcom County

As of Monday, March 16, we will be updating this page by 12:00 pm each day with new cases received through 11:59 pm the previous day. We will update this information sooner if significant developments occur.

Last updated: Wednesday, March 18, 2020 5:00 pm.

	Confirmed Cases**
	7
	Negative Results*
	209
	Deaths
	0

**** Confirmed Cases:** Positive test results for Whatcom County residents reported in the Washington Disease Reporting System as of 11:59 pm.

***Negative Results:** Negative test results available for individuals that are that are known to the Whatcom County Health Department in the Washington Disease Reporting System as of 11:59 pm.

Subscribe and receive an email or text message notification when we update COVID-19 case results, along with other news items from WCHD. To sign up, use [this link to access the subscription sign up webpage](#), and select Health – Public Health News under the News Flash section.

We simplified the way we report COVID-19 test results on March 13, 2020. [Read more about why we made that change.](#)

Novel Coronavirus

Whatcom County HEALTH Department

Novel Coronavirus Fact Sheets

December 2019. Health experts are concerned because little is known about this new virus and it has the potential to cause severe illness and pneumonia in some people.

How does novel coronavirus spread?

Health experts are still learning the details about how this new coronavirus spreads. Other coronaviruses spread from an infected person to others through:

- The air by coughing and sneezing.
- Droplets, such as touching or shaking hands.
- Touching an object or surface with the virus on it, then touching your mouth, nose, or eyes.
- In rare cases, contact with feces (poop).

How severe is novel coronavirus?

Experts are still learning about the range of illness from novel coronavirus. Reported cases have ranged from mild illness (similar to a common cold) to severe pneumonia that requires hospitalization. In the United States, reported cases have been reported mainly in older adults who had other health conditions.

What are the symptoms?

People who have been diagnosed with novel coronavirus have reported symptoms that may appear in as few as 2 days or as long as 14 days after they are exposed to the virus.

Fever  Cough  Difficulty breathing 

Concerns about COVID-19?

Do these things to prevent any kind of respiratory illness

Concerns about COVID-19 (PDF)

If you are sick:

- If you have symptoms like cough, fever, or other respiratory problems, contact your regular doctor first. Do not go to the emergency room. Emergency rooms need to be able to serve those with the most critical needs.
- If you have traveled, make sure to tell your doctor about it.
- Healthcare providers are working with local public health departments and CDC to determine who needs to be tested for COVID-19. (www.cdc.gov/coronavirus/2019-ncov/about/steps-when-sick.html)

For more information:

The Washington State Department of Health has established a call center to address questions from the public. If you have questions about what is happening in Washington, how the virus is spread, and what to do if you have symptoms, please call 1-800-525-0127 and press #. (www.sdh.wa.gov/emergencies/coronavirus)

Wash hands often.  **Cover your coughs & sneezes.** 

Call ahead before visiting your doctor.  **Stay home when sick.**  If you have severe symptoms that need medical attention, call the clinic before going in.

Clean all "high-touch" surfaces daily.

Updated March 4, 2020

Compassion keeps our community strong.

Have compassion for others.

- Viruses don't discriminate based on race, ethnicity, or cultural background. This kind of stigma makes any situation worse, not better!
- Everyone reacts differently to stressful situations.

Practice compassion towards others who may have a health condition or disability.

Compassion Keeps our Community Strong

Have compassion for people who are sick or social distancing.

- Reach out virtually to someone you care about who is sick or in self-quarantine.
- If you see someone in public coughing or sneezing, be kind. Offer a tissue, or kindly suggest they cough into their elbow.

Have compassion for yourself.

- Make time to unwind and remind yourself that strong feelings will fade.
- Take breaks from watching, reading, or listening to news stories.
- Ask for help if you feel overwhelmed or concerned that COVID-19 is affecting your ability to function. It's ok to reach out to your primary care provider, a counselor, or faith leader for support.

How Can I Be Prepared for a COVID-19 Outbreak?

- COVID-19 is a new respiratory virus. There are no treatments for it. Most people will recover on their own, but some people can develop pneumonia and require medical attention.
- COVID-19 is not as well connected with race, ethnicity or nationality. [Stigma will not help](#) [Stigma will not help](#). Seeking and sharing accurate information during a time of heightened concern is one of the best things we can do to keep rumors and misinformation from spreading.

Guidelines for Gatherings of Children and Youth While Schools are Closed
 Advisory from Public Health Surge # King County, March 18, 2020

Washington County
HEALTH
 Department

School closures have been announced by the state, but parents still need to work and students still need safe and enriching spaces to spend their days. The COVID-19 pandemic calls on our whole community to think creatively about how to meet everyone's basic needs and maintain social connections while also blunting the spread of disease.

Here are some guidelines for hosting safe gatherings among children and parents outside of the school setting.

Guidelines for Informal Gatherings of Children and Youth While Schools are Closed

- Sick household members should separate from other people and animals and reach out to their healthcare provider for care. **Do not** visit friends or family. **Do not** go to work or school.
- **Over 60?** Have a chronic medical condition? **Pregnant?** Try to avoid gatherings and caring for other people's kids.
- If you fall into one of these high-risk categories, put your own health first. Refrain from taking care of other people's children if possible. **Read more about occupations that people in high-risk categories should take.**
- Social distancing helps slow down the spread of disease. Social distancing means staying 6 feet or at least an arm's length away from others.
- Respiratory hygiene habits go a long way. Teach your kids:
 - **Cover** their mouth and nose with a tissue when coughing or sneezing, then throw the tissue in the trash.
 - **Wash** their hands with soap and water for at least 20 seconds. Need a timer? Hum the "Happy Birthday" song from beginning to end twice. Use an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.
 - Avoid touching their eyes, nose, or mouth with unwashed hands.
 - Don't share food, water bottles, utensils, or cups.

My neighbors and I want to share childcare responsibilities. What should we keep in mind?

- Limit the number of families involved. This can help reduce the spread of illness between multiple families in a community.
- Keep the group small. The smaller the group, the lower the risk. Aim to involve no more than 10 children in one indoor care setting.
- Consider asking participating families to take their children's temperature before gathering. Remind children and adults to stay home if they have a fever (above 100.4°F), coughing, or shortness of breath, or are otherwise unwell.
- Frequently clean high-touch surfaces, like doorknobs, toys, and keyboards. Everyday cleaning products are effective against COVID-19. **Wash toys twice.**
- Practice social distancing measures whenever possible. Kids love to hug, tag, and tumble, which makes social distancing difficult. You can try to increase the distance between children:
 - Think small—only a few friends at most.
 - Play games that involve fewer opportunities for touching.
 - When kids do touch, remind them of proper respiratory hygiene habits.
