Background

On January 21, 2020, the Centers for Disease Control and Prevention (CDC) and Washington State Department of Health announced the first case of 2019 Novel Coronavirus (COVID-19) in the United States in Washington State.

The risk posed by a virus outbreak depends on factors including how well it spreads between people, the severity of the illness it causes, and the medical or other measures we have to control the impact of the virus (for example, vaccine or

treatment medications). The potential public health threat posed by COVID-19 is very high, both in the United States and around the world.

What's the current risk?

- The risk of exposure is increasing for people who live in Washington state.
- Healthcare workers caring for patients with COVID-19 are at elevated risk of exposure.
- Those who have had close contact with persons with COVID-19 are at elevated risk of exposure.
- Travelers returning from affected [international locations](#) where community spread is occurring are at elevated risk of exposure.
- Our knowledge of COVID-19 is still rapidly evolving. The risk assessment will be updated as needed.

CDC has developed [guidance to help in the risk assessment and management](#) of people with potential exposures to COVID-19.

These numbers will be updated daily at 11 a.m.

2019 Novel Coronavirus (COVID-19) in Washington	
Positive (confirmed) * †	70
Deaths	10
* Positive <ul style="list-style-type: none">• Snohomish County - 18, including 1 death• King County - 51, including 9 deaths• Grant County - 1 case † Please contact the local health department for information.	

Number of People Under Public Health Supervision	
Number of people under public health supervision‡	231
‡ The number of people under public health supervision includes those at risk of having been exposed to novel coronavirus who are monitoring their health under the supervision of public health officials. This number includes people who have returned from China in the past 14 days and are included in federal quarantine guidance .	

Last updated: March 5, 2020 at 11:00 a.m.

Note: To make sure we can provide case counts as quickly and efficiently as possible, we are no longer reporting the number of persons under investigation at a state level. County health officials may choose to report these numbers for their county. This is consistent with other disease outbreaks, where the state generally only reports confirmed cases. Those numbers are changing rapidly as we are now doing multiple runs of tests each day and as commercial labs begin testing, the

amount of administrative time needed to track numbers will increase significantly.
