COVID-19	>

About our data

All data are laboratory-confirmed cases of COVID-19 that we freeze once a day to verify and ensure that we are reporting accurate information. These numbers are the official state numbers, though counties may report their own totals independent of DHS. Combining the DHS and local totals may result in inaccurate totals.

Data shown below are subject to change. As individual cases are investigated by public health, there may be corrections to the status and details of cases that result in changes to this information.

Deaths must be reported by health care providers, medical examiners/coroners, and recorded by local health departments in order to be counted.

The number of people with negative test results includes only Wisconsin residents who had negative test results reported electronically to DHS. As a result, this number underestimates the total number of Wisconsin residents with negative test results.

[For information on testing, see: COVID-19, testing criteria section.](#)

COVID-19 summary

Interpreting Data

Number of newly reported COVID-19 cases, by day, and 7-day average (last 14 days)

Number of COVID-19 test results (positive or negative) and the percent positive, by day (last 14 days)

Cumulative total and newly reported COVID-19 cases by date confirmed

Cumulative total and newly reported COVID-19 deaths by date reported

Percent of COVID-19 cases and deaths by gender

Confirmed COVID-19 cases and deaths by race

Confirmed COVID-19 cases and deaths by ethnicity

Laboratory Testing Capacity

Data collected by voluntary reporting from public, private, and commercial laboratories in Wisconsin. All data are estimates and do not reflect actual number of tests performed in the state. Capacity is dependent on availability of test supplies and adequate staffing.
