Coronavirus Disease 2019 (COVID-19)

Infectious Disease Epidemiology

Coronavirus Disease 2019 (COVID-19)

At this time there are 22 reported Wyoming cases.

3/20/20 Statewide Public Health Order on Gatherings

3/19/20 Statewide Public Health Order on Public Spaces

The Wyoming Department of Health is closely monitoring the coronavirus disease 2019 (COVID-19) outbreak.

The symptoms reported with this disease are familiar to all of us: fever, cough and shortness

of breath. However, this is a continually changing situation.

While most people will likely not experience serious illness related to COVID-19, our highest level of concern involves older residents and people with certain health conditions that put them at higher risk of developing a serious or life-threatening illness.

Wyoming residents should follow our recommendations meant to help them avoid becoming ill and to help them avoid spreading COVID-19 to those who are most vulnerable.

Recommendations

- Stay home when sick and avoid contact with other people unless you need medical attention.
- Follow advice from CDC on what to do if you think you may be sick.
- Follow common-sense steps such as washing your hands often and well; covering your coughs and sneezes; and cleaning and disinfecting.
- Nursing homes, assisted living facilities and other healthcare facilities should closely follow guidelines for infection control and prevention.
- Older people and those with health conditions that mean they have a higher chance of getting seriously ill should avoid close-contact situations.
- Follow current social distancing guidelines.

We should all work together to help keep our friends and neighbors safe!

Testing Numbers

3/20/20 (6 p.m./case count updated but not lab totals)

Tests completed at Wyoming Public Health Laboratory: 334

Tests completed at CDC lab: 1

Tests reported by commercial labs: 31

(Commercial lab tests included if reported to WDH.)

Total reported positive cases: 22
