Coronavirus Disease 2019 (COVID-19)

**Infectious Disease
Epidemiology**

Coronavirus Disease 2019 (COVID-19)

At this time there are 73 reported cases in Wyoming.

The Wyoming Department of Health is closely monitoring the coronavirus disease 2019 (COVID-19) outbreak.

The symptoms reported with this disease are familiar to all of us: fever, cough and shortness of breath. However, this is a continually changing situation.

While most people will likely not experience serious illness related to COVID-19, our highest

level of concern involves older residents and people with certain health conditions that put them at higher risk of developing a serious or life-threatening illness.

Wyoming residents should follow our recommendations meant to help them avoid becoming ill and to help them avoid spreading COVID-19 to those who are most vulnerable.

We should all work together to help keep our friends and neighbors safe!

Recommendations

- Stay home when sick and avoid contact with other people unless you need medical attention.
- Follow advice from CDC on [what to do if you think you may be sick](#).
- Follow common-sense steps such as washing your hands often and well; covering your coughs and sneezes; and cleaning and disinfecting.
- Nursing homes, assisted living facilities and other healthcare facilities should closely follow guidelines for infection control and prevention.
- Older people and those with health conditions that mean they have a higher chance of getting seriously ill should avoid close-contact situations.
- Follow current social distancing guidelines.

Testing Numbers

3/27/20 (case count updated 5 p.m.)

Tests completed at Wyoming Public Health Laboratory: 1,041

Tests completed at CDC lab: 1

Tests reported by commercial labs: 353

(Commercial labs are required to report positive test results to WDH; negative results are not reported consistently.)

Total reported positive cases: 73
